Design Intent:
The landscape design emphasizes discovery and exploration of nature while providing a safe, healing environment for Children. The plant palette consists mainly of native and drought tolerant species with low irrigation water demands. The perimeter of the site reflects many of the native grasses, shrubs and trees found on the Stanford campus, thus fitting nicely into the overall campus aesthetic. Rolling mounds and stone walls are integrated into the lower levels of the building as a way to blend the indoor and outdoor space while providing the necessary security and privacy for the hospital.
TREE DIAGRAM 2

Legend:
- (T) - Existing trees to be transplanted
- (R) - Existing trees to be demolished and replaced
- (E) - Existing trees to remain at existing locations

Note:
- Total Transplanted Tree Quantity: 24
- Total Removed Tree Quantity: 3

Tree ID: 12
- (T) Existing trees to be transplanted, set tree planting plan for new location
- (E) Existing trees to be demolished and replaced with new trees, set new tree planting plan for new location
- (R) Existing trees to remain at existing locations

Building tree average canopy diameter

Replacement: tree species
Replacement: tree quantity
Replacement: tree size

ARB - 009
