

PALO ALTO SALES TAX

Fourth Quarter Receipts for Third Quarter Sales (July - Sept. 2004)

Publication Date: January 2005 The HdL Companies (www.hdlcompanies.com)

In Brief

July - September sales receipts were .9% higher than in the year-earlier period, but a variety of payment aberrations skewed results. Adjusted for anomalies, actual sales were up about 4.3%.

A retroactive payment correction following a routine city audit boosted the light industrial/printers gain. Higher prices and a delayed payment that temporarily cut year-ago receipts fueled the service station increase. Receipt of amounts due in the prior quarter inflated used auto increases.

A payment delay caused by state processing tie-ups caused the new auto dealer decline while a tax refund cut electrical equipment totals. A onetime accounting adjustment caused the office supplies/furniture drop by boosting year-ago proceeds.

Sales in the 9-county Bay Area grew 1.7%; the state rose 4.9%.

2005 SALES TAX FORECASTS

Modest, moderate, murky are all being used to describe California's economic growth in 2005. Even so, a recent consensus forecast suggests a 5.2% sales tax gain for the state overall although performance will vary by jurisdiction. Segments:

GENERAL CONSUMER GOODS: Consumer confidence is up, but the percentage of disposable income used for servicing debt is at an all time high. Meanwhile rising mortgage interest rates are cutting the number of refinancing and home equity loans that have been funding extra consumption. Analysts project an overall inflation gain of 2.5%. Sales increases will be more related to regional growth in household income and population.

AUTOS/TRANSPORTATION: With financing incentives losing their punch, overall car sales are projected to grow less than 1%. Some Asian

and European makes expect to gain while some domestic manufacturers cut production in anticipation of a drop off from record sales. The increased competition may produce an uneven pattern of losers and winners among dealerships.

BUSINESS/INDUSTRY: The steady devaluation of the dollar makes California exports more marketable and encourages new business investment which is projected to grow faster than consumer spending in 2005. Capital investment in heavy equipment and commercial transportation is expected to grow 9%. Some segments of high tech spending should also increase.

CONSTRUCTION/BUILDING MATERIALS:

Rising mortgage rates and prices are expected to result in a slight reduction in new housing starts in 2005

con't from front page

and state cut backs could reduce public works projects. A minor softening in prices is anticipated for materials other than cement. Even so, projects already in the pipeline and an anticipated increase in commercial construction should offset the losses while sales of "do-it-yourself" home improvement merchandise and materials should increase.

RESTAURANTS/HOTELS:

Americans spend almost 47% of their food dollar outside of the home and the National Restaurant Association forecasts a 4.9% increase in sales. The devaluation of the dollar should also help jurisdictions that host international travel.

FUEL/SERVICE STATIONS: Fuel prices are expected to stabilize in 2005 and possibly decline from 2004's record levels. Tax revenues from this source are not expected to exceed last year.
