PROJECT DESCRIPTION

THE PROJECT SITE INCLUDES PROPERTIES OF 3150, 3160, AND 3128 EL CAMINO REAL WITH A COMBINED AREA OF 2.55 ACRE. THE PROPOSED DEVELOPMENT IS A PRIVATELY FUNDED PROJECT AND WILL REPLACE TWO EXISTING COMMERCIAL BUILDINGS WITH RESIDENTIAL APARTMENTS. THE PROGRAM COMPRISES 368 FOR-RENT APARTMENTS, GROUND LEVEL RESIDENT AMENITIES, ROOF DECK AND LOUNGE WITH 455 PARKING STALLS IN A SUBTERRANEAN GARAGE.

THE WIDER SIDEWALK OF THE GROUND FLOOR ENHANCES THE STREETSCAPE AND BIKE/WALK ACTIVITY BY ADDING STREET TREES, PEDESTRIAN-FRIENDLY PLAZAS EQUIPPED WITH LANDSCAPE FURNITURE, ACTIVE STOREFRONT, MULTIPLE STREET LEVEL LOBBIES AND AMENITIES ALONG EL CAMINO REAL.

THE FAÇADE IS BROKEN INTO SMALLER ELEMENTS WITH THE USE OF VERTICAL BREAKS, PLANE CHANGES, AND INCREASED SETBACKS ON BOTH THE GROUND AND UPPER LEVELS TO CREATE A DISTINCTIVE BASE, MIDDLE, AND TOP CONSISTENT WITH THE DESIGN GUIDELINE. ROOFLINE WAS FURTHER ARTICULATED THROUGH USE OF UPPER LEVEL SETBACK, LANDSCAPED ROOF DECK, AND TRANSPARENT ROOF LOUNGE.

THE RESIDENTIAL ACCENT WAS ACHIEVED BY A COMBINATION OF STOREFRONT TRANSPARENCY AND ENHANCED MATERIALS AT GROUND LEVEL FOR A MORE HUMAN-SCALE DESIGN. WARM, RICH COLORS AND MATERIALS SUCH AS WOOD-TEXTURED PANELS AND GROUND LEVEL CULTURED STONE ARE BEING PROPOSED TO EXPRESS A CONTEMPORARY, YET TIMELESS, AESTHETIC.

Notes:

- Plants with low WUCOLS ratings are drought tolerant and regionally appropriate species. Plants noted as California Native are native to California. Other plants, not in either of these two categories are well adapted to Palo Alto. Habitat forming column refers to food value of flowers or fruit for small animals, Food, butterflies and other insects in addition to shelter for some insects.
- Do not use chemical fertilizers, pesticides, herbicides or commercial soil amendment. Use Organic Materials Review Institute (OMRI) materials and compost. Refer to the Bay-Friendly Landscape Guidelines: http://www.stopwaste.org/resource/brochures/bay-friendly-landscape-guidelines-sustainable-practices-landscape-professional for guidance
- Avoid compacting soil in areas that will be unpaved. All planting areas to receive 3" layer of bark mulch,
- All stormwater treatment zones (as defined by the Civil Engineer) shall be top-dressed with a 3" layer of Float Resistant Bio Retention Mulch by Zanker Landscape Materials.

The approximate total quantity of plants proposed is 2,181 Of these plants, 1,943 are native which totals 89% Native plantings.

Tree Protection - It's Part of the Plan!

Make sure your crews and subs do the job right!

Fenced enclosures around trees are essential to protect them by keeping the foliage canopy and branching structure clear from contact by equipment, materials and activities, preserving roots and soil conditions in an intact and non-compacted state, and identifying the Tree Protection Zone (TPZ) in which no soil disturbance is permitted and activities are restricted, unless otherwise approved. **An approved tree protection report must be added to this sheet when project activity occurs within the TPZ of a regulated tree.**
For detailed information on Palo Alto's regulated trees and protection during development, review the **City Tree Technical Manual** (TTM) found at www.cityofpaloalto.org/trees/.

PALO ALTO
STREET TREE PROTECTION INSTRUCTIONS
–SECTION 31–

31-1 General

a. Tree protection has three primary functions. 1) to keep the foliage canopy and branching structure clear from contact by equipment, materials and activities; 2) to preserve roots and soil conditions in an intact and non-compacted state and 3) to identify the Tree Protection Zone (TPZ) in which no soil disturbance is permitted and activities are restricted, unless otherwise approved.

b. The Tree Protection Zone (TPZ) is a restricted area around the base of the tree with a radius of ten-times the diameter of the tree's trunk or ten feet; whichever is greater, enclosed by fencing.

31-2 Reference Documents

a. Detail 605 – Illustration of situations described below.

b. Tree Technical Manual (TTM) Forms (http://www.cityofpaloalto.org/trees/)
1. Trenching Restriction Zones (TTM, Section 2.20(C))
2. Arborist Reporting Protocol (TTM, Section 6.30)
3. Site Plan Requirements (TTM, Section 6.35)
4. Tree Disclosure Statement (TTM, Appendix J)

c. Street Tree Verification (STV) Form (http://www.cityofpaloalto.org/trees/forms)

31-3 Execution

a. Type I Tree Protection: The fence shall enclose the entire TPZ of the tree(s) to be protected throughout the life of the construction project. In some parking areas, if fencing is located on paving or concrete that will not be demolished, then the posts may be supported by an appropriate grade level concrete base, if approved by Public Works Operations.

b. Type II Tree Protection: For trees situated within a planting strip, only the planting strip and yard side of the TPZ shall be enclosed with the required chain link protective fencing in order to keep the sidewalk and street open for public use.

c. Type III Tree Protection: To be used only with approval of Public Works Operations. Trees situated in a tree well or sidewalk planter pit, shall be wrapped with 2-inches of orange plastic fencing from the ground to the first branch and overlaid with 2-inch thick wooden slats bound securely (slats shall not be allowed to dig into the bark). During installation of the plastic fencing, caution shall be used to avoid damaging any branches. Major limbs may also require plastic fencing as directed by the City Arborist.

d. Size, type and area to be fenced. All trees to be preserved shall be protected with six (6') foot high chain link fences. Fences are to be mounted on two-inch diameter galvanized iron posts, driven into the ground to a depth of at least 2-feet at no more than 10-foot spacing. Fencing shall extend to the outer branching, unless specifically approved on the STV Form.

e. "Warning" signs. A warning sign shall be weather proof and prominently displayed on each fence at 20-foot intervals. The sign shall be minimum 8.5-inches x 11-inches and clearly state in half inch tall letters: "WARNING - Tree Protection Zone - This fence shall not be removed and is subject to a fine according to PAMC Section 8.10.110."

f. Duration. Tree fencing shall be erected before demolition; grading or construction begins and remain in place until final inspection of the project, except for work specifically allowed in the TPZ. Work or soil disturbance in the TPZ requires approval by the project arborist or City Arborist (in the case of work around Street Trees). Excavations within the public right of way require a Street Work Permit from Public Works.

g. During construction

1. All neighbors' trees that overhang the project site shall be protected from impact of any kind.
2. The applicant shall be responsible for the repair or replacement plus penalty of any publicly owned trees that are damaged during the course of construction, pursuant to Section 8.04.070 of the Palo Alto Municipal Code.
3. The following tree preservation measures apply to all trees to be retained:
   - **a.** No storage of material, topsoil, vehicles or equipment shall be permitted within the TPZ.
   - **b.** The ground under and around the tree canopy area shall not be altered.
   - **c.** Trees to be retained shall be irrigated, aerated and maintained as necessary to ensure survival.

ALL CHECKED ITEMS APPLY TO THIS PROJECT:

1. ☑ **Inspection of Protective Tree Fencing**. For Public Trees, the Street Tree Verification Form shall be signed by the City Arborist. For Protected Trees, the project site arborist shall provide an initial Monthly Tree Activity Report form with a photograph verifying that he has conducted a field inspection of the trees and that the correct type of protective fencing is in place around the designated tree protection zone (TPZ) prior to issuance of a demolition, grading, or building permit. (See TTM, Verification of Tree Protection, Section 1.39).

2. ☑ **Pre-Construction Meeting**. Prior to commencement of construction, the applicant or contractor shall conduct a pre-construction meeting to discuss tree protection with the job site superintendent, grading operators, project site arborist, City Arborist, and, if a city maintained irrigation system is involved, the Parks Manager (Contact 650-496-6962).

3. ☑ **Inspection of Rough Grading or Trenching**. Contractor shall ensure the project site arborist performs an inspection during the course of rough grading or trenching adjacent to or within the TPZ to ensure trees will not be injured by compaction, cut or fill, drainage and trenching, and if required, inspect aeration systems, tree wells, drains and special paving. The contractor shall provide the project arborist at least 24 hours advance notice of such activity.

4. ☑ **Monthly Tree Activity Report Inspections**. The project site arborist shall perform a minimum monthly activity inspection to monitor and advise on conditions, tree health and retention or, immediately if there are any revisions to the approved plans or protection measures. The Tree Technical Manual Monthly Tree Activity Report format shall be used and sent to the Planning Dept. landscape review staff no later than 14 days after issuance of building permit date. Fax to (650) 329-2154. (See TTM, Monthly Tree Activity Inspection Report, Addendum 11 & section 1.17).

5. ☑ **Special activity within the Tree Protection Zone**. Work in the TPZ area (see also #7 below) requires the direct onsite supervision of the project arborist (see TTM, Trenching, Excavation & Equipment, Section 2.20 C).

6. ☐ **Landscape Architect Inspection**. For discretionary development projects, prior to temporary or final occupancy the applicant or contractor shall arrange for the Landscape Architect to perform an on site inspection of all plant stock, quality of the materials and planting (see TTM, Planting Quality, Section 5.20.1 A) and that the irrigation is functioning consistent with the approved construction plans. Assignment

It was our assignment to physically inspect trees in the survey area based on a topographic map provided by the design team. We were to map, tag and compile data for each tree and write an inventory/survey report documenting our observations.

Summary

This survey provides a numbered map and complete and detailed information for each tree surveyed. There were fifty-seven (57) trees surveyed with twenty-six (26) of the trees protected as defined by the City of Palo Alto's tree protection ordinance. During our survey, none of the trees were rated "A" condition, two (2) of the trees were rated "B" condition, eight (8) trees were rated "C" condition and forty-seven (47) of the trees were rated "D" condition.

A - Retain, condition warrants long-term preservation.
B - Preservable, tree is a benefit and may be worthy of extensive effort or design accommodation.
C- May be preservable but is not worthy of extensive effort or design accommodation.
D – Recommend removal due to existing condition and/or structure.

The valuation of all trees surveyed onsite, using the 10th edition of the Guide for Plant Appraisals, is $199,812.

The tree replacement ratio for the protected trees being removed shall be either 60 x 24" box trees or 22 x 36" box and 14 x 48" box trees.

The project arborist shall be notified when the tree protection fencing has been installed per the tree protection section below. The project arborist shall perform a site visit and write a tree protection verification signoff letter.

Tree #156 is a protected Coast redwood (*Sequoia sempervirens*) tree located near the southern corner of the property. There is a proposed trench that will run approximately 3' from the trunk of this tree. I recommend locating the trench as far away from this tree as possible. I also recommend hand dug exploratory trenching within the tree protection zone of this tree to assess the impact the proposed trench will have on protected tree #156. Furthermore, if the trench is to be dug within the tree protection zone of this tree, the use of heavy equipment or machinery within the tree protection zone shall be prohibited.

Discussion

All the trees surveyed were examined and then rated based on their individual health and structure according to the table following. For example, a tree may be rated "good" under the health column for excellent/vigorous appearance and growth, while the same tree may be

rated "fair/poor" in the structure column if structural mitigation is needed. More complete descriptions of how health and structure are rated can be found under the "Methods" section of this report. The complete list of trees and all relevant information, including their health and structure ratings, their "protected/significant" status, a map and recommendations for their care can be found in the data sheet that accompanies this report.

Rating	Health	Structure
Good	excellent/vigorous	flawless
Fair/good	no significant health concerns	very stable
Fair	showing initial or temporary disease, pests, or lack of vitality. measures should be taken to improve health and appearance.	routine maintenance needed such as pruning or end weight reduction as tree grows
Fair/poor	in decline, significant health issues	significant structural weakness(es), mitigation needed, mitigation may or may not preserve the tree
Poor	dead or near dead	hazard

Tree Disposition Categories

Each tree onsite has been categorized for its suitability for preservation relative to its existing condition. Factors such as tree health, condition, age, planting location, species, and structure are all considered to determine if each tree is suitable for preservation. Each tree in the survey (Tree Data Table) has been assigned one of the following categories:

A - Retain, condition warrants long-term preservation.
B - Preservable, tree is a benefit and may be worthy of extensive effort or design accommodation.
C- May be preservable but is not worthy of extensive effort or design accommodation.
D – Recommend removal due to existing condition and/or structure.

If trees with poor structure or less than ideal conditions are retained, they may require further assessments, monitoring, access restrictions, maintenance, or eventual removal. More thorough conversations about impacts and specific preservation plans can be reported as the project evolves.

Survey Methods

The trunks of the trees are measured using an arborist's diameter tape at 54" above soil grade. In cases where the main trunk divides below 54", the tree is measured (per the City of Palo Alto's protected tree ordinance) at the point where the trunks divide. In these cases, the height of that measurement is given in the note's column on the attached data sheet. The canopy height and spread are estimated using visual references only.

The condition of each tree is assessed by visual observation only from a standing position without climbing or using aerial equipment. No invasive equipment is used. Consequently, it is possible that individual tree(s) may have internal (or underground) health problems or structural defects, which are not detectable by visual inspection. In cases where it is thought further investigation is warranted, a "full tree risk assessment" is recommended. This assessment may be inclusive of drilling or using sonar equipment to detect internal decay and include climbing or the use of aerial equipment to assess higher portions of the tree.

The health of an individual tree is rated based on leaf color and size, canopy density, new shoot growth and the absence or presence of pests or disease.

Individual tree structure is rated based on the growth pattern of the tree (including whether it is leaning); the presence or absence of poor limb attachments (such as co-dominant leaders); the length and weight of limbs and the extent and location of apparent decay. For each tree, a structural rating of fair or above indicates that the structure can be maintained with routine pruning such as removing dead branches and reducing end weight as the tree grows. A fair/poor rating indicates that the tree has significant structural weaknesses and corrective action is warranted. The notes section for that tree will then recommend a strategy/technique to improve the structure or mitigate structural stresses. A poor structural rating indicates that the tree or portions of the tree are likely to fail and that there is little that can constructively be done about the problem other than removal of the tree or large portions of the tree. Very large trees that are rated Fair/Poor for structure AND that are near structures or in an area frequently traveled by cars or people, receive an additional **"CONSIDER REMOVAL" notation under recommendations. This is included because structural mitigation techniques do not guarantee against structural failure, especially in very large trees. Property owners may or may not choose to remove this type of tree but should be aware that if a very large tree experiences a major structural failure, the danger to nearby people or property is significant.

Survey Area Observations

This property is in the commercial zone along El Camino Real, in the City of Palo Alto. This property only has many unprotected trees that need to be removed so construction can proceed as planned. There is a large multifamily structure being proposed and a replanting schedule will be proposed as the project progresses.

Tree Health

The health of the trees in the surveyed area ranges from fair/good to poor. Individual issues and recommendations for each tree are listed under the "Notes" column on the accompanying data sheet. Many of the trees will be removed and replanted as per the City of Palo Alto guidelines.

Tree Structure

Ideally, trees are pruned for structure when young and are properly mainained to reduce end-weight as they grow. This practice prevents excessively long, lateral branches that are prone to breaking off due to weight or wind. The trees in the surveyed receive structural ratings ranging between fair/good and poor.

Recommended Removals Based on Health/ Structure/Species/Contruction Limits

Details of each individual tree are located on the attached Tree Data table.

Local Regulations Governing Trees

Any locally native tree of the species Acer macrophyllum (Bigleaf Maple), Calocedrus decurrens (California Incense Cedar), Quercus agrifolia (Coast Live Oak), Quercus douglasii (Blue Oak), Quercus kelloggii (California Black Oak), or Quercus lobata (Valley Oak) which is eleven and one-half inches in diameter (thirty-six inches in circumference) or more when measured four and one-half feet (fifty-four inches) above natural grade.

(2) Any Coast Redwood tree (species Sequoia sempervirens) that is eighteen inches in diameter (fifty-seven inches in circumference) or more when measured four and one-half feet (fifty-four inches) above natural grade.

(3) Any tree larger than fifteen inches in diameter (forty-seven inches in circumference) or more when measured four and one-half feet (fifty-four inches) above natural grade of any species except those invasive species described as weeds in Section 8.08.010 and those species classified as high water users by the water use classification of the landscape species list approved by the California Department of Water Resources (with the exception of Coast Redwood).

(4) Any tree designated for protection during review and approval of a development project.

(5) Any tree designated for carbon sequestration and storage and/or environmental mitigation purposes as identified in an agreement between the property owner and a responsible government agency or recorded as a deed restriction.

(6) Any heritage tree designated by the city council in accordance with the provisions of this chapter.

(7) Any replacement mitigation tree or other tree designated to be planted due to the conditions listed in Section 8.10.055.

Risks to Trees by Construction

Besides the above-mentioned health and structure-related issues, the trees at this site could be at risk of damage by construction or construction procedures that are common to most construction sites. These procedures may include the dumping or the stockpiling of materials over root systems; the trenching across the root zones for utilities or for landscape irrigation; or the routing of construction traffic across the root system resulting in soil compaction and root dieback. It is therefore essential that Tree Protection Fencing be used as per the Architect's drawings. In constructing underground utilities, it is essential that the location of trenches be done outside the drip lines of trees except where approved by the Arborist.

Tree Protection & Preservation Plan

Trees **#150, #153, #154, #193** and **#195** will require **Type III** tree protection as described below on page 10 of this report.

Tree **#201 through #204** require **Type I** tree protection out to the furthest extent of their canopy driplines as described below. The tree protection for trees #201 and #203 shall be 20' in diameter. Tree protection for tree #202 and #204 shall be 18' in diameter. These dimensions will adequately protect these four protected Coast redwood trees.

The two trees along the west side of the property line will also require **Type I** tree protection fencing that will encircle their entire canopy driplines. The tree protection for these two trees shall be 12' in diameter to keep these two trees protected during construction activities.

The tree protection for Coast redwood **tree #156** shall be **Type I tree** protection at 16' in diameter. The tree protection shall be on my client's side of the property line only and can be supported by appropriate concrete blocks where asphalt or concrete will not allow fence posts to be driven into the ground.

• Type I Tree Protection The fences shall enclose the entire area under the canopy dripline or TPZ of the tree(s) to be saved throughout the life of the project, or until final improvement work within the area is required, typically near the end of the project Parking Areas: If the fencing must be located on paving or sidewalk that will not be demolished, the posts may be supported by an appropriate grade level concrete base. Chain link fencing shall be 6' high and supported by 2" posts spaced no more than 10' apart. These post maybe be supported by a concrete base as mentioned above.

• Type II Tree Protection For trees situated within a narrow planting strip, only the planting strip shall be enclosed with the required chain link protective fencing in order to keep the sidewalk and street open for public use. Chian link fencing shall be 6' high with the appropriate number of 2" fence posts so that the chain link fencing will remain stable during all construction activities.

• Type III Tree Protection Trees situated in a small tree well or sidewalk planter pit, shall be wrapped with 2-inches of orange plastic fencing as padding from the ground to the first branch with 2-inch-thick wooden slats bound securely on the outside. During installation of the wood slats, caution shall be used to avoid damaging any bark or branches. Major scaffold limbs may also require plastic fencing as directed by the City Arborist.

Based on the existing development and the condition and location of trees present on site, the following is recommended:

1. The Project Arborists is Chris Stewart (408) 313-1937. Project Arborist should supervise any excavation activities within the tree protection zone of these trees.
2. Any roots exposed during construction activities that are larger than 2 inches in diameter should not be cut or damaged until the project Arborist has an opportunity to assess the impact that removing these roots could have on the trees.
3. The area under the drip line of trees should be thoroughly irrigated to a soil depth of 18" every 2-4 weeks during the dry months (June-September). Irrigation shall happen for 1 year post construction.
4. Mulch should cover all bare soil within the tree protection fencing. This material must be 6-8 inches in depth after spreading, which must be done by hand. Course wood chips are preferred because they are organic and degrade naturally over time.
5. Loose soil and mulch must not be allowed to slide down slope to cover the root zones or the root collars of protected trees.
6. A preconstruction meeting shall be required that included the project arborist and all contractors and subcontractors to verify all preconstruction conditions have been met.
7. There must be no grading, trenching, or surface scraping inside the driplines of protected trees, unless specifically approved by a Certified Arborist. For trenching, this means:
   a. Trenches for any underground utilities (gas, electricity, water, phone, TV cable, etc.) must be located outside the driplines of protected trees, unless approved by a Certified Arborist. Alternative methods of installation may be suggested.
   b. Landscape irrigation trenches must be located a minimum distance of 10 times the trunk diameter from the trunks of protected trees unless otherwise noted and approved by the Arborist.
8. Materials must not be stored, stockpiled, dumped, or buried inside the driplines of protected trees.
9. Excavated soil must not be piled or dumped, even temporarily, inside the driplines of protected trees.

City of Palo Alto

Tree Protection - It's Part of the Plan!

Make sure your crews and subs do the job right!

Fenced enclosures around trees are essential to protect them by keeping the foliage canopy and branching structure clear from contact by equipment, materials and activities, preserving roots and soil conditions in an intact and non-compacted state, and identifying the Tree Protection Zone (TPZ) in which no soil disturbance is permitted and activities are restricted, unless otherwise approved. **An appoved tree protection report must be added to this sheet when project activity occurs within the TPZ of a regulated tree.** For detailed information on Palo Alto's regulated trees and protection during development, review the **City Tree Technical Manual** (TTM) found at www.cityofpaloalto.org/trees/.

10. Landscape materials (cobbles, decorative bark, stones, fencing, etc.) must not be installed directly in contact with the bark of trees because of the risk of serious disease infection.
11. Landscape irrigation systems must be designed to avoid water striking the trunks of trees, especially oak trees.
12. Any pruning must be done by a Company with an Arborist Certified by the ISA (International Society of Arboriculture) and according to ISA, Western Chapter Standards, 1998.
13. Any plants that are planted inside the driplines of oak trees must be of a species that are compatible with the environmental and cultural requirements of oaks trees. A publication detailing plants compatible with California native oaks can be obtained from The California Oak Foundation's 1991 publication "Compatible Plants Under & Around Oaks" details plants compatible with California native oaks and is currently available online at: http://californiaoaks.org/wpcontent/uploads/2016/04/CompatiblePlantsUnderAroundOaks.pdf

7. Sketches, diagrams, graphs, photos, etc., in this report, being intended as visual aids, are not necessarily to scale and should not be construed as engineering reports or surveys.
8. This report has been made in conformity with acceptable appraisal/evaluation/diagnostic reporting techniques and procedures, as recommended by the International Society of Arboriculture.
9. When applying any pesticide, fungicide, or herbicide, always follow label instructions.
10. No tree described in this report was climbed, unless otherwise stated. This arborist cannot take responsibility for any defects which could only have been discovered by climbing. A full root collar inspection, consisting of excavating the soil around the tree to uncover the root collar and major buttress roots, was not performed, unless otherwise stated. This arborist cannot take responsibility for any root defects which could only have been discovered by such an inspection.

Appendix B – Arborist Disclosure Statement

Arborists are tree specialists who use their education, knowledge, training, and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

Appendix C - Disclaimer and Certification of Performance

Urban Tree Management locates our Tree Inventory Numbers in *approximate* locations, for visual reference only. Field verification of tree locations and tree numbers is required before *any* actions are taken. Trunk diameters, locations, and species are not necessarily accurate on topographic maps. Urban Tree Management, Inc. does not create topographic survey maps and cannot be held liable for information therein.

I certify that the information contained in this report is correct to the best of my knowledge and that this report was prepared in good faith. Please call me if you have questions or if I can be of further assistance.

Ratings for health and structure are given separately for each tree according to the table below. IE, a tree may be rated "Good" under the health column For excellent, vigorous appearance and growth, while the same tree may be rated "Fair, Poor" in the structure column if structural mitigation is needed.

KEY	Health	Structure
Good	excellent, vigorous	flawless
Fair - Good	no significant health concerns	very stable
Fair	declining; measures should be taken to improve health and appearance	routine maintenance needed
Fair - Poor	in decline: significant health issues	mitigation needed, it may or may not preserve this tree
Poor	dead or near dead	hazard

Tree Protection - It's Part of the Plan!

Make sure your crews and subs do the job right!

Fenced enclosures around trees are essential to protect them by keeping the foliage canopy and branching structure clear from contact by equipment, materials and activities, preserving roots and soil conditions in an intact and non-compacted state, and identifying the Tree Protection Zone (TPZ) in which no soil disturbance is permitted and activities are restricted, unless otherwise approved. **An appoved tree protection report must be added to this sheet when project activity occurs within the TPZ of a regulated tree.**
For detailed information on Palo Alto's regulated trees and protection during development, review the **City Tree Technical Manual** (TTM) found at www.cityofpaloalto.org/trees/.

IN CONFORMANCE WITH PAMC 5.24, DECONSTRUCTION AND SOURCE SEPARATION ARE REQUIRED FOR ALL RESIDENTIAL AND COMMERCIAL PROJECTS WHERE STRUCTURES (OTHER THAN A GARAGE OR ADU) ARE BEING COMPLETELY REMOVED, DEMOLITION IS NO LONGER ALLOWED. DECONSTRUCTION TAKES LONGER THAN TRADITIONAL DEMOLITION, IT IS IMPORTANT TO PLAN AHEAD. FOR MORE INFORMATION, VISIT WWW.CITYOFPALOALTO.ORG/DECONSTRUCTION.

2. SALVAGE SURVEY FOR REUSE. A SALVAGE SURVEY IS REQUIRED FOR DECONSTRUCTION PERMIT APPLICATIONS. THE SURVEY SHALL BE CONDUCTED BY A CITY APPROVED REUSE VENDOR. THE SURVEY SUBMITTAL SHALL INCLUDE AN ITEMIZED LIST OF MATERIALS THAT ARE SALVAGEABLE FOR REUSE FROM THE PROJECT. THE APPLICANT SHALL SOURCE SEPARATE AND DELIVER MATERIALS FOR REUSE. CERTIFICATION IS REQUIRED INDICATING THAT ALL MATERIALS IDENTIFIED IN THE SURVEY ARE PROPERLY SALVAGED. CONTACT THE REUSE PEOPLE TO SCHEDULE THIS FREE SURVEY BY PHONE (888) 588-9490 OR E-MAIL INFO@THEREUSEPEOPLE.ORG. MORE INFORMATION CAN BE FOUND AT WWW.THEREUSEPEOPLE.ORG. PLEASE UPLOAD A COMPLETED COPY TO THE DECONSTRUCTION PERMIT.

3. SOURCE SEPARATION FOR RECYCLING. THE APPLICANT SHALL SOURCE SEPARATE DECONSTRUCTION MATERIALS INTO SPECIFIC CATEGORIES FOR RECYCLING. ADDITIONAL STAGING AREAS FOR SOURCE SEPARATED MATERIALS WILL NEED TO BE CONSIDERED. ALL MATERIALS SHALL BE DELIVERED TO ONE OF THE CITY APPROVED MATERIALS RECOVERY FACILITIES LISTED IN GREEN HALO, ALL RECORDS SHALL BE UPLOADED TO WWW.GREENHALOSYSTEMS.COM.

Instructions: After completing Section 1, make a copy of this Excel file for each Drainage Management Area within the project. Enter information specific to the project and DMA in the cells shaded in yellow. Cells shaded in light blue contain formulas and values that will be automatically calculated.

1.0 Project Information

1-1	Project Name:	3150 El Camino Real	The calculations presented here are based on the combination flow and volume sizing method provided in the Countywide Program's C.3 Technical Guidance, Version 5.0 (2016). The steps presented below are explained in Section 5.1 of the Guidance, applicable portions of which are included in this file, in the sheet named "Guidance from Chapter 5".

1-4	Tract or Parcel Map No:		
1-5	Rainfall Region	4	
1-6	Region Mean Annual Precipitation (MAP)	14.60	
1-7	Site Mean Annual Precipitation (MAP)	17	Click here for map
1-8	*MAP adjustement factor is systematically calculated as:*	1.16	

(The "Site Mean Annual Precipitation (MAP)" is divided by the MAP for the applicable rain gauge, shown in Table 5-2, below.)
Refer to the map in Appendix C of the C.3 Technical Guidance to identify the Rainfall Region for the site.

2.0 Calculate Percentage of Impervious Surface for Drainage Management Area (DMA)

2-1 Name of DMA: **DMA-1**

	Type of Surface	Area of surface type within DMA (Sq. Ft.)	Adjust Pervious Surface	Effective Impervious Area
2-2	Impervious surface	11,139	1.0	11,139
2-3	Pervious surface	1,745	0.1	175
	Total DMA Area (square feet) =	12,884		
2-4	*Total Effective Impervious Area (EIA)*			11,314 Square feet

3.0 Calculate Unit Basin Storage Volume in Inches

Table 5-3, Unit Basin Storage Volumes in Inches for 80 Percent Capture Using 48-Hour Drawdowns, based on runoff coefficient

Region	Station, and Mean Annual Precipitation (Inches)	Runoff Coefficient of 1.0

7	San Francisco Oceanside, 19.3"	0.72"

3-1	*Unit basin storage volume from Table 5-3:*	0.64	
	(The coefficient for this method is always 1.0, due to the conversion of any landscaping to effective impervious area.)		
3-2	*Adjusted unit basin storage volume:*	0.75	inches
	(The unit basin storage volume (Item 3-1) is adjusted by applying the MAP adjustment factor (Item 1-8).)		
3-3	*Required Capture Volume (in cubic feet):*	703	Cubic feet
	(The adjusted unit basin sizing volume (Item 3-2) is multiplied by the DMA EIA (Item 2-4) and converted to cubic feet)		

4.0 Calculate the Duration of the Rain Event

4-1	Rainfall Intensity	0.2	inches per hour
4-2	Divide Item 3-2 by Item 4-1	3.73	Hours of Rain Event Duration

7.0 Optimize Size of Treatment Measure

7-1	Enter an area larger than Item 5-2	340	Sq.Ft. (enter larger area if you need less ponding depth.)
7-2	Volume of treated runoff for area in Item 7-1	527.85	Cubic feet (Item 7-1 * 5 inches per hour * 1/12 * Item 4-2)
7-3	Subtract Item 7-2 from Item 3-3	174.72	Cubic feet (Amount of runoff to be stored in ponding area)

OTHER UTILITIES SHOWN ARE APPROXIMATE AND BASED ON FIELD SURVEY AND AVAILABLE UTILITY INFORMATION. IT IS THE CONTRACTORS' RESPONSIBILITY TO VERIFY THE ACTUAL LOCATION AND EXTENT OF UTILITIES PRIOR TO THE COMMENCEMENT OF WORK. PHYSICAL VERIFICATION OF UTILITY LOCATIONS SHALL BE PERFORMED BY CAREFUL PROBING OR HAND DIGGING IN ACCORDANCE WITH ARTICLE 6 OF THE CAL/OSHA CONSTRUCTION SAFETY ORDERS.

CONSTRUCTION NOTES

1. ALL TRENCHING, BACKFILLING AND INSTALLATION BY CONTRACTOR MUST COMPLY WITH CITY OF PALO ALTO STANDARDS.
2. ALL WORK MUST COMPLY WITH CITY OF PALO ALTO(CPA), TELEPHONE, C.A.T.V., STANDARDS AND PRACTICES. ALL WORK MUST BE INSPECTED AND APPROVED BY RESPECTIVE INSPECTORS. RANDOM SOIL SAMPLES SHALL BE TAKEN FROM A MINIMUM OF THREE LOCATIONS PER 1,000' OF TRENCH. 100% OF THE SAMPLE MUST PASS THROUGH A ½" SIEVE AND 75% MUST PASS THROUGH A #4 SCREEN. ADDITIONAL SAMPLES MUST BE TAKEN IF EXISTING SOIL CONDITIONS CHANGE AND IS TO BE AT THE DISCRETION OF THE CPA REPRESENTATIVE ON SITE. THE SOILS MUST NOT CONTAIN ANY ROCKS THAT HAVE SHARP EDGES OR THAT MAY OTHERWISE BE ABRASIVE. THE SOILS MUST NOT CONTAIN CLODS LARGER THAN ½" IF TO BE USED AS SHADING, BEDDING OR LEVELING MATERIALS. COMPACTION REQUIREMENTS MUST MEET ANY APPLICABLE CPA FEDERAL, STATE, COUNTY OR LOCAL REQUIREMENTS. ANY NATIVE SOILS OR IMPORT MATERIALS USED MUST NOT HINDER THOSE EFFORTS.
3. BACKFILL SHALL BE APPROVED BY THE UTILITY COMPANIES AND THE CITY. COMPACTION WILL BE TESTED AND PASSED BY THE SOILS ENGINEER.
4. IF SOIL IS NOT ROCK FREE, ADD 4" DEPTH OF TRENCH FOR SAND BEDDING.
5. VERIFY SPLICE BOX EXCAVATION SIZES WITH SUPPLIER(S).
6. THE TRENCHING CONTRACTOR SHALL COORDINATE THE UTILITY COMPANIES' INSTALLATION.
7. CONTRACTOR SHALL MAKE HIMSELF FAMILIAR WITH THE PROJECT IMPROVEMENT PLANS AND CONDUCT HIS WORK ACCORDINGLY.
8. IT IS THE TRENCHING CONTRACTOR'S RESPONSIBILITY TO PROTECT IN PLACE ALL EXISTING FACILITIES. NO EXTRA PAYMENT WILL BE CONSIDERED FOR CROSSING OTHER SYSTEMS.
9. RADIUS DESIGN ASSUMES NO RESPONSIBILITY FOR THE PROJECT CONDITIONS. THESE DRAWINGS WERE PREPARED USING DATA SUPPLIED BY CPA, TELEPHONE, C.A.T.V., IMPROVEMENT PLANS AND THE CITY'S VARIOUS "AS BUILT" INFORMATION. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO PHYSICALLY REVIEW THE PROJECT PRIOR TO SUBMITTING HIS BID.
10. CONTRACTOR WILL COMPLY WITH ALL LAWS, ORDINANCES AND REGULATIONS. CONTRACTOR SHALL BE FAMILIAR WITH O.S.H.A., INDUSTRIAL SAFETY ORDERS AND SHALL CONDUCT HIS WORK ACCORDINGLY. WHEN WORKING NEAR ENERGIZED OR "HOT" EQUIPMENT, THE UTILITY OWNER SHALL BE NOTIFIED TO SUPPLY THE APPROPRIATE MAN POWER. PUBLIC SAFETY AND TRAFFIC CONTROL MEASURES ARE THE CONTRACTOR'S RESPONSIBILITY.
11. THE CONTRACTOR SHALL PROTECT CONSTRUCTION STAKING. HE SHALL COORDINATE STAKING WITH THE PROJECT'S CIVIL ENGINEER.
12. CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (USA) TWO WORKING DAYS PRIOR TO START OF WORK. (800) 227-2600.
13. CONTRACTOR SHALL NOTIFY INSPECTORS OF ANY POTENTIAL CONFLICTS PRIOR TO START OF WORK.
14. THIS PLAN IS TO BE USED FOR SOLE PURPOSE OF DIGGING THE JOINT TRENCH. SEE CPA, AT&T, AND COMCAST PLANS FOR EXACT SIZE AND NUMBER OF CONDUITS INSTALLED IN THE JOINT TRENCH. IT IS THE CONTRACTOR'S RESPONSIBILITY TO ENSURE THE CORRECT NUMBER, SIZE AND TYPES OF CONDUITS ARE INSTALLED PER THE ENGINEERED PLANS BY EACH UTILITY COMPANY.
15. NOTE PLANS ISSUED AT THE PRE-CONSTRUCTION MEETING MAY BE SUBJECT TO REVISIONS, IF FINAL PLANS FROM EACH UTILITY COMPANY WERE NOT AVAILABLE AT THE START OF CONSTRUCTION.
16. WATER, SEWER, DRAINS, SANITARY WASTE, FUELS (INCLUDING DIESEL AND GASOLINE), OIL, PROPANE AND OTHER VOLATILE HEAVIER THAN AIR GASES, SPRINKLER, IRRIGATION, STEAM AND OTHER "WET" FACILITIES SHALL MAINTAIN A MINIMUM OF FOUR FEET FROM THE NEAREST OUTER SURFACE OF CPA DRY FACILITIES WITH NO LESS THAN ONE FOOT OF EARTH (SOIL BARRIER) BETWEEN THE ADJACENT SIDES OF THE INDIVIDUAL TRENCHES.
17. IN THE EXTRAORDINARY CASE THAT THE MINIMUM FOUR FOOT HORIZONTAL SEPARATION CANNOT BE ATTAINED BETWEEN "WET" UTILITIES AND COMPANY DRY FACILITIES, A VARIANCE MAY APPROVED BY THE LOCAL INSPECTION SUPERVISOR AND SUBMITTED TO SERVICE PLANNING SUPPORT PROGRAM MANAGER FOR APPROVAL.
18. THIS JOINT TRENCH PLAN WAS PREPARED BASED ON TOPOGRAPHICAL SURVEY AS PROVIDED BY A CIVIL ENGINEER. THE CONTRACTOR IS CAUTIONED THAT EXPLORATORY WORK IS NECESSARY TO DETERMINE THE ACTUAL LOCATION OF ANY EXISTING UTILITY. RADIUS STRONGLY RECOMMENDS THAT ALL UTILITIES BE PHYSICALLY LOCATED ON THE SITE BEFORE THE ONSET OF SITE WORK. SUBSTRUCTURE LOCATIONS MAY REQUIRE FIELD ADJUSTMENT TO COMPENSATE FOR ACTUAL EXISTING UTILITY LOCATIONS.

SECTION TO BE COMPLETED AFTER CONSTRUCTION

After construction is complete submit the following at the City Development Center to schedule your final inspection:

- ☐ Construction debris receipts from an approved facility using Green Halo.
- ☐ If HERS testing was required per the homes energy report, attach the completed forms.
- ☐ If there were alterations during construction that impacted the energy report (i.e. R values, U factors, Equipment Types) rerun the report and attach it.

I certify that:

- ☐ CALGreen inspections were performed throughout construction.
- ☐ The home has met the CALGreen measures as claimed on this sheet. Those required for landscaping may be excluded from this confirmation if verified within 6 months of final inspection.
- ☐ Through a combination of onsite inspections and confirmation from the Contractor there have been no alterations that impacted the energy report for the home, unless the new report is provided as an attachment.
