Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Failure to maintain secondary containment (e.g. failure of secondary containment testing).  
Violation Notes: The two Veeder-Root/Gilbarco dispensers are fitted with conversion frames, but portions of product piping and the fuel filters hang outside of the UDC pans. The product piping overhangs the electrical conduit troughs in both dispensers and the filters overhang the dispenser mount troughs along the long edges of the UDC pan. If a spill or a leak was to occur from the portion of the product piping or filters not overhanging the UDC pan, the leak would not be channeled into the existing UDC pans. Under dispenser containment must provide containment for any potential leaks within the dispenser. Repair, modify or replace UDCs and/or dispensers as necessary to provide adequate protection for any potential leaks within the dispensers. Apply for a permit from HMCD, if necessary.

Violation Date: 04-30-2015  
Citation: 23 CCR 16 2715 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715

Violation Description: Failure to comply with one or more of the designated operator monthly inspection requirements: failed to inspect the monthly alarm history report; attach a copy of the alarm history; failed to inspect for the presence of liquid or debris in the spill container/spill bucket and under dispenser containment; failed to inspect the under dispenser containment to ensure that monitoring equipment is placed in the proper position; failure to inspect for liquid or debris in the containment sump where an alarm occurred or for which there is no record of a service visit; or failure to check that all testing and maintenance has been completed and documented.

Violation Notes: Returned to compliance on 05/10/2016.

The DUSTO

inspections did not properly record the last secondary containment date (logged 6/28/2014 when the testing was done 6/16/2014) and did not address the alarms that happened during the testing in the July report. Ensure the DUSTO has access to the testing reports so they may make accurate account of all testing and alarm situations.

Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.  
Violation Notes: The 87-siphon STP sump's liquid sensor was observed on the opposite side of the rounded sump bottom than the product piping. At this location, a leak would not be detected at the earliest moment of opportunity. The sensor was re-located to the side of the rounded sump bottom nearest the product piping during inspection. This violation was corrected at the time of inspection. NO FURTHER ACTION IS NEEDED.

Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)  
Violation Description: Failure of sensor to be located in the proper position/location.  
Violation Notes: Returned to compliance on 05/01/2014. 87Siphon fill sensor did not alarm upon introduction to water. Sensor tapped to loosen float and retested-- operated as designed at that point. 91 STP sensor located on wrong side of sump- furthest from pipe. Sensor was relocated during inspection to pipe side of sump. NO CORRECTIVE ACTION REQUIRED, REPAIRED DURING INSPECTION.

Site ID: 79764  
Site Name: VALERO OF PALO ALTO  
Violation Date: 04-27-2017  
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)  
Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.  
Violation Notes: The DUSTO Monthly Inspection Reports issued on the following dates incorrectly identify the dates of the last Annual Monitoring System Certification, testing of line leak detectors, and spill bucket testing as 4/16/2016, when all of the aforementioned testing occurred on 4/29/2016: 12/6/2016, 11/3/2016, 10/5/2016, 9/7/2016, 8/3/2016, 7/7/2016 NOTE: A violation has previously been issued for the DUSTO listing the incorrect dates for UST system testing. Ensure that the DUSTO is checking that all required UST system testing and maintenance has been completed and correctly documents the dates those activities last occurred in the DUSTO Monthly Inspection Reports.

Violation Date: 04-27-2017  
Citation: HSC 6.7 25284 - California Health and Safety Code, Chapter 6.7, Section(s) 25284  
Violation Description: Failure to obtain a valid permit to operate from the CUPA.  
Violation Notes: The facility does not have a 5 year Permit-to-Operate. Correct all violations and provide a written response with the corrective actions taken for all violations cited in the Official Notice of Inspection Reports issued on 4/27/2017 and 4/29/2016 to HMCD. Upon verification that all violations have been corrected, a 5 year Permit-to-Operate will be issued. A duplicate copy of the Official Notice of Inspection Report issued on 4/29/2016 will be provided with this inspection report.

Violation Description: Failure to maintain secondary containment (e.g. failure of secondary containment testing).  
Violation Notes: The two Veeder-Root/Gilbarco dispensers are fitted with conversion frames, but portions of product piping and the fuel filters hang outside of the UDC pans. The product piping overhangs the electrical conduit troughs in both dispensers and the filters overhang the dispenser mount troughs along the long edges of the UDC pan. If a spill or a leak was to occur from the portion of the product piping or filters not overhanging the UDC pan, the leak would not be channeled into the existing UDC pans. Under dispenser containment must provide containment for any potential leaks within the dispenser. Repair, modify or replace UDCs and/or dispensers as necessary to provide adequate protection for any potential leaks within the dispensers. Apply for a permit from HMCD, if necessary.

BUCKET TEST REPORT WITHIN 30 DAYS.

Eval Division: Santa Clara County Environmental Health  
Eval Program: UST  
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 04-30-2015  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Nikola Zagorov (all certifications current) of ECO-Check Compliance. Site is monitored by a Veeder-Root TLS 350 panel and sensors (sumps and under dispenser containment -208, fuel annulars -407, waste oil annular -344). Sensors were tested in water and provided audible and visible alarms. Positive shutdown performed as required. Fail safe (sensor out, power out) functioned properly. The electronic line leak detectors were tested at dispenser 1/2 and detected a simulated 3.0 GPH leak at 10 psi and shut down the turbines. Automatic Tank Gauge (ATG) is used for overfill protection and provided alarms that are audible and visible from the fill point. The spill buckets are contained in the sumps and were hydrostatically tested for one hour with no loss. The emergency shut off was tested and shut down the turbines. NOTE: The 87 fill sump sensor did not work when [Truncated]

Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 05-01-2014  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Onsite to oversee annual UST system monitoring certification conducted by ECO-CHEK. Technician Nik Zagorov has current ICC (5/30/15), Veeder Root (12/13/14) and VMI (3/18/16) certifications. The following sensors provided alarms when tested: 87 Master, 87 siphon, 91, used oil annular sensors 87 Master, 87 siphon, 91, used oil fill sump sensors 87 Master, 87 siphon, 91 STP sump sensors. These sensors also provided shutdown of the turbines. UDC 1/2 and 3/4 sensors. These sensors also provided shutdown of turbines. PLLDs were able to detect and provide shutdown of turbines with 3 gph/10psi simulated leak. ATGs for overfill prevention provided audible and visual alarms at the point of fill. Spill buckets held water for one hour without loss. --noted 87Master fill bucket has drain valve stuck in closed position. Site owner indicated that he has hand pump and capability to empty bucket after fuel drops. Reviewed the following: DUSTO Monthly inspection [Truncated]

Eval General Type: Other/Unknown  
Eval Date: 06-13-2017  
Violations Found: No  
Eval Type: Other, not routine, done by local agency  
Eval Notes: On-site to witness secondary containment testing performed by Eco-Chek Compliance. Steven Abano on-site to perform testing but unable to present certifications for Incon Sump Tester. Provide to the County within 30 days. Witnessed the testing of the following components: Annulars (87, 87-syp, 91) tested with 7 inches of hg vacuum for 1 hour. Piping (87, 87-syp, 91) tested at 6PSI pressure for 1 hour. Will not remain on-site to witness testing of the following components: Annular (used oil) to be tested at 7 inches of hg vacuum for 1 hour Sumps (87, 87-syp, 91, used oil) tested hydrostatically using caldwell method for 30 minutes. UDCs (4) (87, 91), tested hydrostatically using caldwell method for 30 minutes. Additionally, technicians plan to test the fill sumps hydrostatically using caldwell method for 30 minutes.

Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 05-23-2016  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Facility is a single-garage auto shop that does auto service but no bodywork or painting. Facility generates the following wastes: used oil, used antifreeze, oily rags (commercially laundered), used oil and gasoline filters, spent batteries (core exchange, none on-site at the time of inspection), non-empty aerosol cans (none on-site or in trash), and oily absorbent (none on-site). Facility does not generate the following waste streams: brake fluid, parts washing solution, spent gasoline, or oily water. Employees receive regular hazardous waste training through tailgate meetings and indoor waste containers are managed as point-of-generation. Fire extinguishers are annually serviced, spill kit is available, and emergency aisle space is adequate. Inspection covered waste storage area and service areas in garage, outdoor underground used oil tank, shipping container, trash cans and dumpsters, review of bills of lading for rags and batteries, and consolidated manifests for [Truncated]

Violation Notes: records of appropriate follow-up actions.  
The following errors were found in the past 12 months of Designated Operator(DO) monthly reports; 1) For the DO records for 11/25/17 and 12/12/17 it shows that the DO- Brian Dunahay has an expired DO ICC certification as of 12/9/16. It also lists Alvin Milburn as a DO, however Mr. Milburn has been retired from over a year from this company according to the technician. 2) Several DO records dating back to June and July 2017 show three different grades of fuel in the tanks (87, 89, 91). However, 89 or Plus fuel is no longer stored in the tank at this location. According to the technician the tank has been storing 87 grade fuel for a year and a half now. Ensure that all of the do monthly reports are maintained in sufficient detail.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 02-03-2017  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Brian Dunahay (certifications current) of EPIC Compliance Systems, Inc. The annular and sump sensors were tested in water and provided audible and visible alarms. NOTE: The 91 annular sensor could not be removed from the tank for testing. Schedule the testing of that sensor with our office before the end of February to avoid a violation. The turbine sump also provided positive shutdown of the turbines. Sensor out and power out (fail safe) triggered positive shutdown of all turbines. The line leak detectors (LLD) were tested and detected a simulated 3 gph leak at 10 PSI. Overfill protection is provided by flapper valves in the fill tubes. Spill buckets are direct buried and hydrostatically tested for one hour with no loss. Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation. Tank and monitoring [Truncated]

Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 04-18-2014  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: ONSITE TO WITNESS UST MONITORING EQUIPMENT TESTING PERFORMED BY UST SERVICE TECHNICIAN ALVIN MILBURN OF EPIC COMPLIANCE SYSTEMS. MR. MILBURN HAS CURRENT ICC UST SERVICE TECHNICIAN CERTIFICATION (EXP. 11/7/2014), VEEDER-ROOT SERVICE TECHNICIAN (EXP. 03/17/2015) AND VMI TESTER (EXP. 04/02/2016). THE FOLLOWING UST MONITORING EQUIPMENT WAS FUNCTIONALLY TESTED: - FOUR ANNULAR SPACE SENSORS - PASSED - THREE STP SUMP SENSORS (PROVIDED AUDIBLE/VISIBLE ALARM AND POSITIVE TURBINE SHUTDOWN) PASSED - FOUR UDCS PASSED SENSOR OUT AND POWER OUT PROVIDED POSITIVE TURBINE SHUTDOWN. OBSERVED FLAPPER VALVES IN ALL FOUR DROP TUBES. THE THREE LINE LEAK DETECTORS WERE TESTED FROM DISPENSER 3/4 WITH SIMULATED 3.0 G.P.H. LEAKS AND PASSED. THE FOUR FILL SPILL BUCKETS WERE HYDROSTATICALLY TESTED FOR ONE HOUR AND PASSED. RECEIVED A COPY OF THE CFO LETTER FOR FINANCIAL RESPONSIBILITY TODAY. UST DOCUMENTS HAVE BEEN ENTERED IN THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM [Truncated]

Eval General Type: Other/Unknown  
Eval Date: 05-13-2015  
Violations Found: No  
Eval Type: Other, not routine, done by local agency  
Eval Notes: Oversaw portions of triennial SB989 UST secondary containment testing performed by Epic Compliance. During the time I was onsite: 87 piping was pressurized to 3 psi for 30 minutes without loss. --Technician stated that test pressure of 3 psi was based on test protocols for systems which utilize a Bravo nut at piping connection in the UDC 87 STP sump was tested with water using the Caldwell accelerated test method. Sump showed no change of liquid level over 30 minutes. 91 STP sump and piping failed first test. Leak believed to be at Bravo nut in UDC 5/6. Nut to be tightened and test re-run. 91 and 89 tank annular spaces were under 10 in Hg vacuum. Repairs were being made to piping test boot in 91 sump.

Violation Date: 02-08-2016  
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)  
Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.  
Violation Notes: Returned to compliance on 03/01/2016. Noted mop bucket holding water with oily sheen on top. Personnel noted that mop water generally is disposed of to the toilet. Advised staff that oily sheen would generally be considered enough oil to make water mixture hazardous, but need to make determination prior to disposal. May skim oil from bucket for disposal as used oil prior to sewerage remaining water.

Violation Date: 02-06-2018  
Citation: 23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)

Violation Description: Failure to maintain monitoring and maintenance records and/or maintain records of appropriate follow-up actions.

Violation Notes: The following errors were found in the past 12 months of Designated Operator(DO) monthly reports; 1) For the DO records for 11/25/17 and 12/12/17 it shows that the DO- Brian Dunahay has an expired DO ICC certification as of 12/9/16. It also lists Alvin Milburn as a DO, however Mr. Milburn has been retired from over a year from this company according to the technician. 2) Several DO records dating back to June and July 2017 show three different grades of fuel in the tanks (87, 89, 91). However, 89 or Plus fuel is no longer stored in the tank at this location. According to the technician the tank has been storing 87 grade fuel for a year and a half now. Ensure that all of the do monthly reports are maintained in sufficient detail.

Violation Date: 04-18-2014  
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)  
Violation Description: Failure of sensor to be located in the proper position/location.  
Violation Notes: Returned to compliance on 06/16/2014. THIS SAME VIOLATION WAS CITED IN THE OFFICIAL NOTICE OF INSPECTION DATED 5/22/2014. THE TYPE OF SENSOR (VR 407) IN THE USED OIL TANK ANNULAR SPACE IS NOT APPROVED BY THE MANUFACTURER, VEEDER-ROOT, FOR USE WITH USED OIL TANKS. EPIC COMPLIANCE WAS CONTRACTED TO REPLACE THE SENSOR IN FEBRUARY 2014, HOWEVER DUE TO A MISCOMMUNICATION, THEY INSTALLED A NEW VERSION OF THE SAME SENSOR (VR 407). WITHIN 30 DAYS, SUBMIT A UST PERMIT APPLICATION TO OUR OFFICE TO CHANGE THE SENSOR TO ONE THAT IS APPROVED FOR USE WITH USED OILS TANKS SUCH AS THE VR MICRO SENSOR 794380-344.

Eval Type: Routine done by local agency  
Eval Notes: 2nd containment + CERS update.  
Eval Division: Palo Alto City Fire Department  
Eval Program: HMRRP  
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 02-03-2017  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Brian Dunahay (certifications current) of EPIC Compliance Systems, Inc. The annular and sump sensors were tested in water and provided audible and visible alarms. NOTE: The 91 annular sensor could not be removed from the tank for testing. Schedule the testing of that sensor with our office before the end of February to avoid a violation. The turbine sump also provided positive shutdown of the turbines. Sensor out and power out (fail safe) triggered positive shutdown of all turbines. The line leak detectors (LLD) were tested and detected a simulated 3 gph leak at 10 PSI. Overfill protection is provided by flapper valves in the fill tubes. Spill buckets are direct buried and hydrostatically tested for one hour with no loss. Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation. Tank and monitoring [Truncated]

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 02-06-2018  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On-site to oversee an annual monitoring system certification. Testing was conducted by; Brian Dunahay with Epic Compliance Systems. Mr. Dunahay has the following certifications; ICC#8021436 Exp., 2/16/19; VMI#3497 exp., 3/4/18; and VR#B42886 exp., 3/14/19. Prior to testing of the monitoring equipment there were no active alarms at the EMC Gilbarco panel. Tank System Set-up: T1- 87 Regular Unleaded T2- 87 Regular Unleaded-2 T3- 91 Supreme T4- Used oil The following components were tested and passed during this inspection; - 3 STP sumps sensors provided a positive shut-down condition at the turbine. - 4 annular sensors provided an audible/visual alarm at the panel. - 3 MLLD's were tested and provided a slow flow condition at the dispensers for the 3 fuel tanks. - Failsafe and sensor out were verified during this inspection. - Flapper valves are installed in all fuel tanks and these were verified during this inspection. -4 Spill buckets for the fuel tanks [Truncated]

Eval Notes: Oil to regulated UST, label affixed to wall near fill port. Coolant recycled onsite to 55 gallon drum after storage in 150 gal tank (marked as ERM at this point ). Logs of recycling kept and reviewed showing routine polishing and fortification of coolant for onsite re-use. Container for re-usable coolant noted in shop. noting amounts and dates of recycling. Filters drummed for off site. 2x55 properly labeled onsite. Mop waster consolidated with antifreeze. Parts washer serviced regularly. Rags serviced by Aramark. Batteries exchanged for core value by Interstate. Emergency procedures posted at front desk. Reviewed receipts for pick up of oil and filters for past year, as well as logs for antifreeze recycle. Emergency training per UST, rest of training is "informal" tailgate type training. G020C: Label was affixed to the rolling oil collection cart. G412C: Label was affixed to oil filter drain tote, and date marked on oil filter collection drum.

Eval Type: Routine done by local agency  
Eval Notes: Onsite to oversee annual UST monitoring certification. Certification done by EPIC Compliance Systems, technician Alvin Milburn. Mr. Milburn had up-to-date certifications for ICC, Veeder Root and VMI (tester). The following sensors were tested: 91, 89, 87 and used oil annular sensors. Each sensor provided audible and visual alarms at Gilbarco monitoring panel. 91, 89, 87 STP sensors. Each sensor provided audible and visual alarms at Gilbarco monitoring panel and provided positive shutdown of turbines. \*see violations\* Sensor out and power out provided shut down of turbines. MLLDs for piping associated with 87, 89 and 91 products. Each MLLD detected simulated 3gph, 10psi leak and provided slow flow. Spill buckets for 87, 89, 91 and used oil tanks held water for one hour without loss. UDC float and chain assemblies were tested with each providing shutdown of pump upon addition of water. Noted mechanical flappers to be used for overflow prevention. Piping test all [Truncated]

Eval Notes: Onsite to oversee continuation of annual monitoring certification. Certification done by EPIC Compliance Systems, technician Alvin Milburn. Mr. Milburn had the following certifications: ICC (878949UT,11/5/16), VR (A27843, 6/17/15), VMI tester (1796, 3/11/16). The following sensors were tested: 91, 89, 87 and used oil annular sensors. Each sensor provided audible and visual alarms at Gilbarco monitoring panel. 91, 89, 87 STP sensors. Each sensor provided audible and visual alarms at Gilbarco monitoring panel and provided positive shutdown of turbines except as noted above. Sensor out and power out provided shut down of turbines. MLLDs for piping associated with 87, 89 and 91 products. Each MLLD detected simulated 3gph, 10psi leak and provided slow flow. Spill buckets for 87, 89, 91 and used oil tanks held water for one hour without loss. Noted some leakage from oil bucket through drain valve, which was then adjusted. UDC float and chain assemblies were tested [Truncated]

conducted on 1/20/17. At time of annual mon certification testing, the 91 octane, unleaded annular sensor was not able to be tested. Testing conducted today by Hamza Abdallah of Epic Compliance. Mr. Abdallah has valid ICC and VR certifications. 91 octane annular sensor was removed and dipped in water. Alarm was noted at the Gilbarco alarm panel. Sensor was re-set in tank annulus and alarm panel read ALL FUNCTIONS NORMAL.

ONSITE TO WITNESS UST MONITORING EQUIPMENT TESTING PERFORMED BY UST SERVICE TECHNICIAN ALVIN MILBURN OF EPIC COMPLIANCE SYSTEMS. MR. MILBURN HAS CURRENT ICC UST SERVICE TECHNICIAN CERTIFICATION (EXP. 11/7/2014), VEEDER-ROOT SERVICE TECHNICIAN (EXP. 03/17/2015) AND VMI TESTER (EXP. 04/02/2016). THE FOLLOWING UST MONITORING EQUIPMENT WAS FUNCTIONALLY TESTED: - FOUR ANNULAR SPACE SENSORS - PASSED - THREE STP SUMP SENSORS (PROVIDED AUDIBLE/VISIBLE ALARM AND POSITIVE TURBINE SHUTDOWN) PASSED - FOUR UDCS PASSED SENSOR OUT AND POWER OUT PROVIDED POSITIVE TURBINE SHUTDOWN. OBSERVED FLAPPER VALVES IN ALL FOUR DROP TUBES. THE THREE LINE LEAK DETECTORS WERE TESTED FROM DISPENSER 3/4 WITH SIMULATED 3.0 G.P.H. LEAKS AND PASSED. THE FOUR FILL SPILL BUCKETS WERE HYDROSTATICALLY TESTED FOR ONE HOUR AND PASSED. RECEIVED A COPY OF THE CFO LETTER FOR FINANCIAL RESPONSIBILITY TODAY. UST DOCUMENTS HAVE BEEN ENTERED IN THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM [Truncated]

Citation: 23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)  
Violation Description: Failure to maintain monitoring and maintenance records and/or maintain records of appropriate follow-up actions.  
Violation Notes: The following errors were found in the past 12 months of Designated Operator(DO) monthly reports; 1) For the DO records for 11/25/17 and 12/12/17 it shows that the DO- Brian Dunahay has an expired DO ICC certification as of 12/9/16. It also lists Alvin Milburn as a DO, however Mr. Milburn has been retired from over a year from this company according to the technician. 2) Several DO records dating back to June and July 2017 show three different grades of fuel in the tanks (87, 89, 91). However, 89 or Plus fuel is no longer stored in the tank at this location. According to the technician the tank has been storing 87 grade fuel for a year and a half now. Ensure that all of the do monthly reports are maintained in sufficient detail.

Violation Date: 04-18-2014  
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)

Violation Description: Failure of sensor to be located in the proper position/location.  
Violation Notes: Returned to compliance on 06/16/2014. THIS SAME VIOLATION WAS CITED IN THE OFFICIAL NOTICE OF INSPECTION DATED 5/22/2014. THE TYPE OF SENSOR (VR 407) IN THE USED OIL TANK ANNULAR SPACE IS NOT APPROVED BY THE MANUFACTURER, VEEDER-ROOT, FOR USE WITH USED OIL TANKS. EPIC COMPLIANCE WAS CONTRACTED TO REPLACE THE SENSOR IN FEBRUARY 2014, HOWEVER DUE TO A MISCOMMUNICATION, THEY INSTALLED A NEW VERSION OF THE SAME SENSOR (VR 407). WITHIN 30 DAYS, SUBMIT A UST PERMIT APPLICATION TO OUR OFFICE TO CHANGE THE SENSOR TO ONE THAT IS APPROVED FOR USE WITH USED OILS TANKS SUCH AS THE VR MICRO SENSOR 794380-344.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 02-03-2017  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Brian Dunahay (certifications current) of EPIC Compliance Systems, Inc. The annular and sump sensors were tested in water and provided audible and visible alarms. NOTE: The 91 annular sensor could not be removed from the tank for testing. Schedule the testing of that sensor with our office before the end of February to avoid a violation. The turbine sump also provided positive shutdown of the turbines. Sensor out and power out (fail safe) triggered positive shutdown of all turbines. The line leak detectors (LLD) were tested and detected a simulated 3 gph leak at 10 PSI. Overfill protection is provided by flapper valves in the fill tubes. Spill buckets are direct buried and hydrostatically tested for one hour with no loss. Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation. Tank and monitoring [Truncated]

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On-site to oversee an annual monitoring system certification. Testing was conducted by; Brian Dunahay with Epic Compliance Systems. Mr. Dunahay has the following certifications; ICC#8021436 Exp., 2/16/19; VMI#3497 exp., 3/4/18; and VR#B42886 exp., 3/14/19. Prior to testing of the monitoring equipment there were no active alarms at the EMC Gilbarco panel. Tank System Set-up: T1- 87 Regular Unleaded T2- 87 Regular Unleaded-2 T3- 91 Supreme T4- Used oil The following components were tested and passed during this inspection; - 3 STP sumps sensors provided a positive shut-down condition at the turbine. - 4 annular sensors provided an audible/visual alarm at the panel. - 3 MLLD's were tested and provided a slow flow condition at the dispensers for the 3 fuel tanks. - Failsafe and sensor out were verified during this inspection. - Flapper valves are installed in all fuel tanks and these were verified during this inspection. -4 Spill buckets for the fuel tanks [Truncated]

Eval Notes: Oil to regulated UST, label affixed to wall near fill port. Coolant recycled onsite to 55 gallon drum after storage in 150 gal tank (marked as ERM at this point ). Logs of recycling kept and reviewed showing routine polishing and fortification of coolant for onsite re-use. Container for re-usable coolant noted in shop. noting amounts and dates of recycling. Filters drummed for off site. 2x55 properly labeled onsite. Mop waster consolidated with antifreeze. Parts washer serviced regularly. Rags serviced by Aramark. Batteries exchanged for core value by Interstate. Emergency procedures posted at front desk. Reviewed receipts for pick up of oil and filters for past year, as well as logs for antifreeze recycle. Emergency training per UST, rest of training is "informal" tailgate type training. G020C: Label was affixed to the rolling oil collection cart. G412C: Label was affixed

Eval Type: Routine done by local agency  
Eval Notes: Onsite to oversee annual UST monitoring certification. Certification done by EPIC Compliance Systems, technician Alvin Milburn. Mr. Milburn had up-to-date certifications for ICC, Veeder Root and VMI (tester). The following sensors were tested: 91, 89, 87 and used oil annular sensors. Each sensor provided audible and visual alarms at Gilbarco monitoring panel. 91, 89, 87 STP sensors. Each sensor provided audible and visual alarms at Gilbarco monitoring panel and provided positive shutdown of turbines. \*see violations\* Sensor out and power out provided shut down of turbines. MLLDs for piping associated with 87, 89 and 91 products. Each MLLD detected simulated 3gph, 10psi leak and provided slow flow. Spill buckets for 87, 89, 91 and used oil tanks held water for one hour without loss. UDC float and chain assemblies were tested with each providing shutdown of pump upon addition of water. Noted mechanical flappers to be used for overflow prevention. Piping test all [Truncated]

Eval Type: Routine done by local agency  
Eval Notes: Onsite to oversee continuation of annual monitoring certification. Certification done by EPIC Compliance Systems, technician Alvin Milburn. Mr. Milburn had the following certifications: ICC (878949UT, 11/5/16), VR (A27843, 6/17/15), VMI tester (1796, 3/11/16). The following sensors were tested: 91, 89, 87 and used oil annular sensors. Each sensor provided audible and visual alarms at Gilbarco monitoring panel. 91, 89, 87 STP sensors. Each sensor provided audible and visual alarms at Gilbarco monitoring panel and provided positive shutdown of turbines except as noted above. Sensor out and power out provided shut down of turbines. MLLDs for piping associated with 87, 89 and 91 products. Each MLLD detected simulated 3gph, 10psi leak and provided slow flow. Spill buckets for 87, 89, 91 and used oil tanks held water for one hour without loss. Noted some leakage from oil bucket through drain valve, which was then adjusted. UDC float and chain assemblies were tested [Truncated]

Eval Notes: Follow up inspection to annual monitoring system certification conducted on 1/20/17. At time of annual mon certification testing, the 91 octane, unleaded annular sensor was not able to be tested. Testing conducted today by Hamza Abdallah of Epic Compliance. Mr. Abdallah had valid ICC and VR certifications. 91 octane annular sensor was removed and dipped in water. Alarm was noted at the Gilbarco alarm panel. Sensor was re-set in tank annulus and alarm panel read ALL FUNCTIONS NORMAL.

Eval Notes: Oversaw portions of triennial SB989 UST secondary containment testing performed by Epic Compliance. During the time I was onsite: 87 piping was pressurized to 3 psi for 30 minutes without loss. --Technician stated that test pressure of 3 psi was based on test protocols for systems which utilize a Bravo nut at piping connection in the UDC 87 STP sump was tested with water using the Caldwell accelerated test method. Sump showed no change of liquid level over 30 minutes. 91 STP sump and piping failed first test. Leak believed to be at Bravo nut in UDC 5/6. Nut to be tightened and test re-run. 91 and 89 tank annular spaces were under 10 in Hg vacuum. Repairs were being made to piping test boot in 91 sump.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS TANKS:  
Site ID: 36253  
CERS ID: 10079596  
CERS Description: Chemical Storage Facilities

Violations:  
Site ID: 36253  
Site Name: HEWLETT PACKARD B-20  
Violation Date: 04-22-2016  
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665

Violation Description: Failure to comply with one or more of the following: failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion.

Violation Notes: Returned to compliance on 05/16/2016.

The spill container failed initial hydrostatic testing. A new cap was placed on the fill riser and the spill container was tested a second time. Following replacement of the riser cap, the spill container failed hydrostatic testing again. The spill container was tested a third time after tightening a fitting on the riser, and failed again. Service Station Systems, Inc. technicians were still troubleshooting the spill container at the end of this inspection. \*Repair or replace the spill container as necessary to ensure proper spill containment during filling of the UST system. Note: A permit is required for spill container replacement.

Violation Program: UST  
Violation Source: CERS

Site ID: 36253  
Site Name: HEWLETT PACKARD B-20  
Violation Date: 04-23-2014  
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)

Violation Description: Failure of sensor to be located in the proper position/location.  
Violation Notes: Returned to compliance on 11/11/2014. There are two sets of return and supply pipelines entering the tank top sump for the diesel underground storage tank. Secondary containment for these pipelines terminates within the sump, as designed, to allow for monitoring of primary pipelines. One of the four termination points is covered with a blue test boot that does not have an open valve facing downward (between the 3:00 o'clock and 9:00 o'clock positions), therefore preventing detection of a leak at the earliest possible opportunity. This test boot must be rotated downward or removed to allow for proper monitoring of this pipeline.

Violation Description: UST Program - Operations/Maintenance - General  
Violation Notes: Returned to compliance on 11/11/2014. There are two sets of return and supply pipelines entering the tank top sump for the diesel underground storage tank. Secondary containment for these pipelines terminates within the sump, as designed, to allow for monitoring of primary pipelines. Two of the four termination points are covered with test boots that do not have open valves, therefore preventing proper pipe monitoring (both black boots). These test boots must be pulled back or removed to allow for monitoring of these two pipelines.

Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34

Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.

Violation Notes: Returned to compliance on 05/18/2016.

Financial

Responsibility documentation needs to be updated to reflect the change of ownership and submitted to CERS. An updated hard copy of the Certification of Financial Responsibility (signed February 22, 2016) showing Hewlett Packard Enterprise as the tank owner was observed during this inspection. Documentation related to the surety bond was not observed. Ensure that the surety bond includes current tank owner information and make it available for review during inspection (submit to CERS, maintain on site or have available at the time of inspection). Once updated, make a copy of the surety bond available for review by HMCD.

Eval Notes: Onsite to watch secondary containment testing of UST system. Testing conducted by ABLE Maintenance, technician James Moore who holds current ICC Certification 5254517 (exp 7/26/15) Fuel supply piping run from UST to transition sump (feeds penthouse generator) held 5 psi pressure for one hour without loss. Fuel return piping run from building to UST tank top sump failed to hold pressure. Fuel supply piping run from UST to ground level day tank held 4.5 psi for one hour without loss. Fuel return piping run from ground level day tank to UST held 4.5 psi for one hour without loss. Aboveground supply piping from ground level day tank to generator held 5.1 psi for one hour without loss. Aboveground return piping from generator to ground level day tank held 5.25 psi for one hour without loss. Initial Incon accelerated test for tank top sump failed. Determined that boot on penthouse return piping is point of leak, and technician unable to put on split boot for repair. [Truncated]

Violations Found: No  
Eval Type: Other, not routine, done by local agency  
Eval Notes: Onsite to day to get status update for removal of UST and affiliated piping and to witness some portion of the tank and piping cleaning. Tank was opened at manway. No cutting of tank was required and unobstructed view of tank interior will be possible. Tank was in the process of being cleaned. Cleaning solution (simple green) was being applied with a Hudson sprayer, and a high pressure hose was being used to remove residuals and scale. Fluids were evacuated to a pumper truck operated by Clean Harbors Inc. All actions were consistent with the information proved in the approved "tank system on-site cleaning application". Two sets of piping exist: Group A which consists of two lines of 3 inch over 2 inch Ameron red thread fiberglass feeding a transition sump then to the building for the "penthouse" day tank/e-gen. Group B which consists of two lines of 4 inch over 2 inch Smith fiberglass feeding the ground level day tank/e-gen. Group A piping had been excavated and [Truncated]

Eval Notes: Onsite to oversee the removal of a UST. Upon arrival, tank was in process of being inerted by addition of 100 lbs of dry ice. Tank interior was visually inspected, with no signs of residual contamination or sludge in the tank. LEL and O2 reading were taken, and upon reaching LEL13% and O2 2.6%, the tank was approved for removal. Tank was removed from the excavation and set on pavement to be crushed and placed in a 20 yard roll off bin for disposal as non-hazardous waste. Excavator machine was unable to reach native soil under the tank to facilitate sample taking. Sampling was deferred until Monday, October 24. Noted that piping had been removed from the trench from the tank to the transition sump. Piping was indicated as having been rinsed back to the tank for cleaning. Piping was noted as being resting on plastic at the time of inspection

Eval Notes: Onsite to collect samples from tank excavation. Tank removed Thursday, 10/20. Excavator at time could not reach point at which native soil was present. Deferred sampling until larger excavator could be brought in. One sample was taken from the west end of the excavation. Sample was intermittent loose soil with a lot of pea gravel intersperced. Sample was hand packed to brass sleeve with teflon coverings under caps. Evidence tape was affixed to caps. Sample was recorded on a Chain of Custody and was submitted to lab for analysis. During subsequent excavation, an adjacent tree sloughed into the excavation pit. Sampling was suspended due to site safety concerns.

CERS Description: Hazardous Waste Generator

**Violations:**

Site ID: 36253  
Site Name: HEWLETT PACKARD B-20  
Violation Date: 04-22-2016  
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665

Violation Description: Failure to comply with one or more of the following: failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion.

Violation Notes: Returned to compliance on 05/16/2016.

The spill

container failed initial hydrostatic testing. A new cap was placed on the fill riser and the spill container was tested a second time. Following replacement of the riser cap, the spill container failed hydrostatic testing again. The spill container was tested a third time after tightening a fitting on the riser, and failed again. Service Station Systems, Inc. technicians were still troubleshooting the spill container at the end of this inspection. \*Repair or replace the spill container as necessary to ensure proper spill containment during filling of the UST system. Note: A permit is required for spill container replacement.

Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.  
Violation Notes: Returned to compliance on 05/18/2016.

Financial  
Responsibility documentation needs to be updated to reflect the change of ownership and submitted to CERS. An updated hard copy of the Certification of Financial Responsibility (signed February 22, 2016) showing Hewlett Packard Enterprise as the tank owner was observed during this inspection. Documentation related to the surety bond was not observed. Ensure that the surety bond includes current tank owner information and make it available for review during inspection (submit to CERS, maintain on site or have available at the time of inspection). Once updated, make a copy of the surety bond available for review by HMCD.

Violation Date: 04-22-2016  
Citation: 23 CCR 16 2715(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(a)

Violation Description: The owner/operator has failed to designate an UST operator or to inform the CUPA or any change in the designated UST operator(s) within 30 days after a change.

Violation Notes: Returned to compliance on 05/18/2016.

Israel

Santillan has been performing the monthly Designated Operator (DO) inspections since December 2015. Kris Bell performed the November 19, 2015 DO inspection. The most current DO notification form submitted to CERS on 6/17/2015 does not include Israel Santillan or Kris Bell as primary or alternate Designated Operators. Update and resubmit the DO notification form to CERS.

Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34

Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.  
Violation Notes: Returned to compliance on 11/04/2016. The Financial Responsibility submitted by HP is not valid. HP has notified that it intends to use a surity bond in conjuncture with the State UST Clean Up fund. This combination of mechanisms is not allowed. HP was made aware of this in e-mail and phone correspondence on October 16, 2014 with no resolution.

Eval Notes: Onsite to watch secondary containment testing of UST system. Testing conducted by ABLE Maintenance, technician James Moore who holds current ICC Certification 5254517 (exp 7/26/15) Fuel supply piping run from UST to transition sump (feeds penthouse generator) held 5 psi pressure for one hour without loss. Fuel return piping run from building to UST tank top sump failed to hold pressure. Fuel supply piping run from UST to ground level day tank held 4.5 psi for one hour without loss. Fuel return piping run from ground level day tank to UST held 4.5 psi for one hour without loss. Aboveground supply piping from ground level day tank to generator held 5.1 psi for one hour without loss. Aboveground return piping from generator to ground level day tank held 5.25 psi for one hour without loss. Initial Incon accelerated test for tank top sump failed. Determined that boot on penthouse return piping is point of leak, and technician unable to put on split boot for repair. [Truncated]

Eval Date:	10-19-2016
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Onsite to day to get status update for removal of UST and affiliated piping and to witness some portion of the tank and piping cleaning. Tank was opened at manway. No cutting of tank was required and unobstructed view of tank interior will be possible. Tank was in the process of being cleaned. Cleaning solution (simple green) was being applied with a Hudson sprayer, and a high pressure hose was being used to remove residuals and scale. Fluids were evacuated to a pumper truck operated by Clean Harbors Inc. All actions were consistent with the information proved in the approved "tank system on-site cleaning application". Two sets of piping exist: Group A which consists of two lines of 3 inch over 2 inch Ameron red thread fiberglass feeding a transition sump then to the building for the "penthouse" day tank/e-gen. Group B which consists of two lines of 4 inch over 2 inch Smith fiberglass feeding the ground level day tank/e-gen. Group A piping had been excavated and [Truncated]

Eval Notes:	Onsite to oversee the removal of a UST. Upon arrival, tank was in process of being inerted by addition of 100 lbs of dry ice. Tank interior was visually inspected, with no signes of residual contamination or sludge in the tank. LEL and O2 reading were taken, and upon reaching LEL13% and O2 2.6%, the tank was approved for removal. Tank was removed from the excavation and set on pavement to be crushed and placed in a 20 yard roll off bin for disposal as non-hazardous waste. Excavator machine was unable to reach native oil under the tank to facilitate sample taking. Sampling was deferred until Monday, October 24. Noted that piping had been removed from the trench from the tank to the transition sump. Piping was indicated as having been rinsed back to the tank for cleaning. Piping was noted as being resting on plastic at the time of inspection

Eval Notes:

Onsite to oversee additional piping sampling. The following samples were taken using brass sleeves: Sample Location 6: "pipe run 4". Taken from beneath piping enters/exits building and in area adjacent to previously abandoned piping. Old piping was located during excavation, no record of contents or closure. Sample taken at approximately 5 feet BGS. Sample location 8: "pipe run 5". Taken from beneath piping run from ground level emergency generator to tank. Sample located approximately half way between generator enclosure wall and sidewalk at a depth of 6 feet BGS. Location is also approximately 20 feet from Sample location 1. Piping exiting the ground level generator enclosure immediately took a downward vertical turn and then in approximately 2 feet, turned on an angle toward the tank. Area immediately under the vertical section of piping was excavated for sampling, but poured concrete was encountered at approximately 4.5-5 feet BGS which prohibited hand [Truncated]

Violation Date: 04-22-2016  
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665

Violation Description: Failure to comply with one or more of the following: failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion.

Violation Notes: Returned to compliance on 05/16/2016.

The spill container failed initial hydrostatic testing. A new cap was placed on the fill riser and the spill container was tested a second time. Following replacement of the riser cap, the spill container failed hydrostatic testing again. The spill container was tested a third time after tightening a fitting on the riser, and failed again. Service Station Systems, Inc. technicians were still troubleshooting the spill container at the end of this inspection. \*Repair or replace the spill container as necessary to ensure proper spill containment during filling of the UST system. Note: A permit is required for spill container replacement.

supply pipelines entering the tank top sump for the diesel underground storage tank. Secondary containment for these pipelines terminates within the sump, as designed, to allow for monitoring of primary pipelines. One of the four termination points is covered with a blue test boot that does not have an open valve facing downward (between the 3:00 o'clock and 9:00 o'clock positions), therefore preventing detection of a leak at the earliest possible opportunity. This test boot must be rotated downward or removed to allow for proper monitoring of this pipeline.

Site ID: 36253  
Site Name: HEWLETT PACKARD B-20  
Violation Date: 04-22-2016  
Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34  
Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.  
Violation Notes: Returned to compliance on 05/18/2016.  
Financial  
Responsibility documentation needs to be updated to reflect the change of ownership and submitted to CERS. An updated hard copy of the Certification of Financial Responsibility (signed February 22, 2016) showing Hewlett Packard Enterprise as the tank owner was observed during this inspection. Documentation related to the surety bond was not observed. Ensure that the surety bond includes current tank owner information and make it available for review during inspection (submit to CERS, maintain on site or have available at the time of inspection). Once updated, make a copy of the surety bond available for review by HMCD.

Violation Date: 04-22-2016  
Citation: HSC 6.7 25284 - California Health and Safety Code, Chapter 6.7, Section(s) 25284  
Violation Description: Failure to obtain and maintain a valid operation permit from the CUPA.  
Violation Notes: Returned to compliance on 05/18/2016.

Facility

does not have a valid UST Permit to Operate. Update and resubmit the UST Operating Permit Application Information including current Tank Owner and Tank Operator information. Ownership changed to Hewlett Packard Enterprise around 11/1/2015, but Hewlett Packard Company is still listed as the Tank Owner and Tank Operator with the 6/17/2015 CERS submittal (most recent submission of UST information).

Citation: 23 CCR 16 2715(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(a)  
Violation Description: The owner/operator has failed to designate an UST operator or to inform the CUPA or any change in the designated UST operator(s) within 30 days after a change.  
Violation Notes: Returned to compliance on 05/18/2016.

Israel

Santillan has been performing the monthly Designated Operator (DO) inspections since December 2015. Kris Bell performed the November 19, 2015 DO inspection. The most current DO notification form submitted to CERS on 6/17/2015 does not include Israel Santillan or Kris Bell as primary or alternate Designated Operators. Update and resubmit the DO notification form to CERS.

Eval Notes: Onsite to watch secondary containment testing of UST system. Testing conducted by ABLE Maintenance, technician James Moore who holds current ICC Certification 5254517 (exp 7/26/15) Fuel supply piping run from UST to transition sump (feeds penthouse generator) held 5 psi pressure for one hour without loss. Fuel return piping run from building to UST tank top sump failed to hold pressure. Fuel supply piping run from UST to ground level day tank held 4.5 psi for one hour without loss. Fuel return piping run from ground level day tank to UST held 4.5 psi for one hour without loss. Aboveground supply piping from ground level day tank to generator held 5.1 psi for one hour without loss. Aboveground return piping from generator to ground level day tank held 5.25 psi for one hour without loss. Initial Incon accelerated test for tank top sump failed. Determined that boot on penthouse return piping is point of leak, and technician unable to put on split boot for repair. [Truncated]

Eval Date: 10-19-2016  
Violations Found: No  
Eval Type: Other, not routine, done by local agency  
Eval Notes: Onsite to day to get status update for removal of UST and affiliated piping and to witness some portion of the tank and piping cleaning. Tank was opened at manway. No cutting of tank was required and unobstructed view of tank interior will be possible. Tank was in the process of being cleaned. Cleaning solution (simple green) was being applied with a Hudson sprayer, and a high pressure hose was being used to remove residuals and scale. Fluids were evacuated to a pumper truck operated by Clean Harbors Inc. All actions were consistent with the information proved in the approved "tank system on-site cleaning application". Two sets of piping exist: Group A which consists of two lines of 3 inch over 2 inch Ameron red thread fiberglass feeding a transition sump then to the building for the "penthouse" day tank/e-gen. Group B which consists of two lines of 4 inch over 2 inch Smith fiberglass feeding the ground level day tank/e-gen. Group A piping had been excavated and [Truncated]

Violations Found: No  
Eval Type: Other, not routine, done by local agency  
Eval Notes: Onsite to oversee the removal of a UST. Upon arrival, tank was in process of being inerted by addition of 100 lbs of dry ice. Tank interior was visually inspected, with no signs of residual contamination or sludge in the tank. LEL and O2 reading were taken, and upon reaching LEL13% and O2 2.6%, the tank was approved for removal. Tank was removed from the excavation and set on pavement to be crushed and placed in a 20 yard roll off bin for disposal as non-hazardous waste. Excavator machine was unable to reach native oil under the tank to facilitate sample taking. Sampling was deferred until Monday, October 24. Noted that piping had been removed from the trench from the tank to the transition sump. Piping was indicated as having been rinsed back to the tank for cleaning. Piping was noted as being resting on plastic at the time of inspection

was present. Deferred sampling until larger excavator could be brought in. One sample was taken from the west end of the excavation. Sample was intermittent loose soil with a lot of pea gravel intersperced. Sample was hand packed to brass sleeve with teflon coverings under caps. Evidence tape was affixed to caps. Sample was recorded on a Chain of Custody and was submitted to lab for analysis. During subsequent excavation, an adjacent tree sloughed into the excavation pit. Sampling was suspended due to site safety concerns.

Eval Notes:

Onsite to oversee sampling post-removal of the tank and piping. The following samples were taken in my presence. Each sample was taken with a slide hammer using brass sleeves. Each sample was marked as indicated and evidence tape was affixed to each cap/end. Samples were recorded on a chain of custody and stored on ice prior to shipment  
Sample location 2: "tank bottom 2". Taken from tank excavation bottom. Lots of pea gravel in sample matrix. Sample taken at approximately 14 feet BGS. No odor or discoloration noted. Sample location 3: "pipe run 1". Taken from beneath piping run from tank to building/roof top generator and within 1 foot of 90 degree bend in piping from tank to ground level generator. Sample taken at approximately 3 feet BGS. No odor or discoloration noted. Sample location 4: "pipe run 2". Taken from beneath piping run from tank to building/roof top generator. Sample taken at approximately 3.5 feet BGS. No odor or discoloration noted. Sample [Truncated]

Eval Notes:

Onsite to oversee additional piping sampling. The following samples were taken using brass sleeves: Sample Location 6: "pipe run 4". Taken from beneath where piping enters/exits building and in area adjacent to previously abandoned piping. Old piping was located during excavation, no record of contents or closure. Sample taken at approximately 5 feet BGS. Sample location 8: "pipe run 5". Taken from beneath piping run from ground level emergency generator to tank. Sample located approximately half way between generator enclosure wall and sidewalk at a depth of 6 feet BGS. Location is also approximately 20 feet from Sample location 1. Piping exiting the ground level generator enclosure immediately took a downward vertical turn and then in approximately 2 feet, turned on an angle toward the tank. Area immediately under the vertical section of piping was excavated for sampling, but poured concrete was encountered at approximately 4.5-5 feet BGS which prohibited hand [Truncated]

Eval Notes: Onsite to witness pressure testing of piping to be left in place after removal of tank. Under sidewalk to the southwest of the tank primary piping could not be removed from secondary piping. In lieu of removal of pipe and sampling from underneath piping, a pressure test was conducted. West-most pipe held 4.8 psi for 30 minutes without loss East-most pipe held 5 psi for 30 minutes without loss. Piping may be capped and abandoned in place. Noted that all piping trenches, tank excavation and transition sump hole had been backfilled. Per Mr. Schirripa, all piping from within the building (from transition sump to roof top day tank) has been removed, rinsed and disposed of. For final closure of project and signed tank closure please provide the following information: All Sample results, including documentation demonstrating the evidence tape was intact. Sample chain of custody UST cleaning certification Copies of manifests demonstrating that any cleaning [Truncated]

**Violations:**

Site ID: 36253  
Site Name: HEWLETT PACKARD B-20  
Violation Date: 04-22-2016  
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665

Violation Description: Failure to comply with one or more of the following: failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion.

Violation Notes: Returned to compliance on 05/16/2016.

The spill container failed initial hydrostatic testing. A new cap was placed on the fill riser and the spill container was tested a second time. Following replacement of the riser cap, the spill container failed hydrostatic testing again. The spill container was tested a third time after tightening a fitting on the riser, and failed again. Service Station Systems, Inc. technicians were still troubleshooting the spill container at the end of this inspection. \*Repair or replace the spill container as necessary to ensure proper spill containment during filling of the UST system. Note: A permit is required for spill container replacement.

Violation Description: 16, Section(s) 2641(a)  
Failure of sensor to be located in the proper position/location.  
Violation Notes: Returned to compliance on 11/11/2014. There are two sets of return and supply pipelines entering the tank top sump for the diesel underground storage tank. Secondary containment for these pipelines terminates within the sump, as designed, to allow for monitoring of primary pipelines. One of the four termination points is covered with a blue test boot that does not have an open valve facing downward (between the 3:00 o'clock and 9:00 o'clock positions), therefore preventing detection of a leak at the earliest possible opportunity. This test boot must be rotated downward or removed to allow for proper monitoring of this pipeline.

Violation Date: 04-23-2014  
Citation: HSC 6.7 25284 - California Health and Safety Code, Chapter 6.7, Section(s) 25284

Violation Description: Failure to obtain and maintain a valid operation permit from the CUPA.  
Violation Notes: Returned to compliance on 11/11/2014. The Underground Storage Tank Permit to Operate for this facility expired February 28, 2014. An application to renew this permit has not been submitted to date. Submit the facility and tank information on CERS to renew your UST Permit to Operate. Your CERS ID number is 10079596. DISREGARD CORRECTIVE ACTION TEXT BELOW REGARDING SUBMITTAL OF HARD COPY FORMS. SEE [www.EHinfo.org/hazmat](http://www.EHinfo.org/hazmat) FOR DETAILS REGARDING ELECTRONIC REPORTING REQUIREMENTS. A FACILITY RECORD FOR THIS SITE HAS ALREADY BEEN CREATED ON THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) WEBSITE AT <http://cers.calepa.ca.gov>. APPLY FOR RENEWAL OF YOUR UST OPERATING PERMIT WITHIN 30 DAYS.

Violation Date: 04-22-2016  
Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34

Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.  
Violation Notes: Returned to compliance on 05/18/2016.

Financial  
Responsibility documentation needs to be updated to reflect the change of ownership and submitted to CERS. An updated hard copy of the Certification of Financial Responsibility (signed February 22, 2016) showing Hewlett Packard Enterprise as the tank owner was observed during this inspection. Documentation related to the surety bond was not observed. Ensure that the surety bond includes current tank owner information and make it available for review during inspection (submit to CERS, maintain on site or have available at the time of inspection). Once updated, make a copy of the surety bond available for review by HMCD.

Eval Notes: Onsite to watch secondary containment testing of UST system. Testing conducted by ABLE Maintenance, technician James Moore who holds current ICC Certification 5254517 (exp 7/26/15) Fuel supply piping run from UST to transition sump (feeds penthouse generator) held 5 psi pressure for one hour without loss. Fuel return piping run from building to UST tank top sump failed to hold pressure. Fuel supply piping run from UST to ground level day tank held 4.5 psi for one hour without loss. Fuel return piping run from ground level day tank to UST held 4.5 psi for one hour without loss. Aboveground supply piping from ground level day tank to generator held 5.1 psi for one hour without loss. Aboveground return piping from generator to ground level day tank held 5.25 psi for one hour without loss. Initial Incon accelerated test for tank top sump failed. Determined that boot on penthouse return piping is point of leak, and technician unable to put on split boot for repair. [Truncated]

Eval Notes: Onsite to day to get status update for removal of UST and affiliated piping and to witness some portion of the tank and piping cleaning. Tank was opened at manway. No cutting of tank was required and unobstructed view of tank interior will be possible. Tank was in the process of being cleaned. Cleaning solution (simple green) was being applied with a Hudson sprayer, and a high pressure hose was being used to remove residuals and scale. Fluids were evacuated to a pumper truck operated by Clean Harbors Inc. All actions were consistent with the information provided in the approved "tank system on-site cleaning application". Two sets of piping exist: Group A which consists of two lines of 3 inch over 2 inch Ameron red thread fiberglass feeding a transition sump then to the building for the "penthouse" day tank/e-gen. Group B which consists of two lines of 4 inch over 2 inch Smith fiberglass feeding the ground level day tank/e-gen. Group A piping had been excavated and [Truncated]

Eval Notes: Onsite to oversee the removal of a UST. Upon arrival, tank was in process of being inerted by addition of 100 lbs of dry ice. Tank interior was visually inspected, with no signs of residual contamination or sludge in the tank. LEL and O2 reading were taken, and upon reaching LEL13% and O2 2.6%, the tank was approved for removal. Tank was removed from the excavation and set on pavement to be crushed and placed in a 20 yard roll off bin for disposal as non-hazardous waste. Excavator machine was unable to reach native oil under the tank to facilitate sample taking. Sampling was deferred until Monday, October 24. Noted that piping had been removed from the trench from the tank to the transition sump. Piping was indicated as having been rinsed back to the tank for cleaning. Piping was noted as being resting on plastic at the time of inspection

Violations Found: No  
Eval Type: Other, not routine, done by local agency  
Eval Notes: Onsite to collect samples from tank excavation. Tank removed Thursday, 10/20. Excavator at time could not reach point at which native soil was present. Deferred sampling until larger excavator could be brought in. One sample was taken from the west end of the excavation. Sample was intermittent loose soil with a lot of pea gravel interspersed. Sample was hand packed to brass sleeve with teflon coverings under caps. Evidence tape was affixed to caps. Sample was recorded on a Chain of Custody and was submitted to lab for analysis. During subsequent excavation, an adjacent tree sloughed into the excavation pit. Sampling was suspended due to site safety concerns.

Eval Type: Other, not routine, done by local agency  
Eval Notes: Onsite to oversee additional piping sampling. The following samples were taken using brass sleeves: Sample Location 6: "pipe run 4". Taken from beneath piping enters/exits building and in area adjacent to previously abandoned piping. Old piping was located during excavation, no record of contents or closure. Sample taken at approximately 5 feet BGS. Sample location 8: "pipe run 5". Taken from beneath piping run from ground level emergency generator to tank. Sample located approximately half way between generator enclosure wall and sidewalk at a depth of 6 feet BGS. Location is also approximately 20 feet from Sample location 1. Piping exiting the ground level generator enclosure immediately took a downward vertical turn and then in approximately 2 feet, turned on an angle toward the tank. Area immediately under the vertical section of piping was excavated for sampling, but poured concrete was encountered at approximately 4.5-5 feet BGS which

Violations:

Site ID: 36253  
Site Name: HEWLETT PACKARD B-20  
Violation Date: 04-22-2016  
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665

Violation Description: Failure to comply with one or more of the following: failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion.

Violation Notes: Returned to compliance on 05/16/2016.

The spill

container failed initial hydrostatic testing. A new cap was placed on the fill riser and the spill container was tested a second time. Following replacement of the riser cap, the spill container failed hydrostatic testing again. The spill container was tested a third time after tightening a fitting on the riser, and failed again. Service Station Systems, Inc. technicians were still troubleshooting the spill container at the end of this inspection. \*Repair or replace the spill container as necessary to ensure proper spill containment during filling of the UST system. Note: A permit is required for spill container replacement.

Violation Description: Failure of sensor to be located in the proper position/location.  
Violation Notes: Returned to compliance on 11/11/2014. There are two sets of return and supply pipelines entering the tank top sump for the diesel underground storage tank. Secondary containment for these pipelines terminates within the sump, as designed, to allow for monitoring of primary pipelines. One of the four termination points is covered with a blue test boot that does not have an open valve facing downward (between the 3:00 o'clock and 9:00 o'clock positions), therefore preventing detection of a leak at the earliest possible opportunity. This test boot must be rotated downward or removed to allow for proper monitoring of this pipeline.

Eval Notes: Onsite to oversee the removal of a UST. Upon arrival, tank was in process of being inerted by addition of 100 lbs of dry ice. Tank interior was visually inspected, with no signs of residual contamination or sludge in the tank. LEL and O2 reading were taken, and upon reaching LEL 13% and O2 2.6%, the tank was approved for removal. Tank was removed from the excavation and set on pavement to be crushed and placed in a 20 yard roll off bin for disposal as non-hazardous waste. Excavator machine was unable to reach native oil under the tank to facilitate sample taking. Sampling was deferred until Monday, October 24. Noted that piping had been removed from the trench from the tank to the transition sump. Piping was indicated as having been rinsed back to the tank for cleaning. Piping was noted as being resting on plastic at the time of inspection

Eval Notes: Onsite to collect samples from tank excavation. Tank removed Thursday, 10/20. Excavator at time could not reach point at which native soil was present. Deferred sampling until larger excavator could be brought in. One sample was taken from the west end of the excavation. Sample was intermittent loose soil with a lot of pea gravel interspersed. Sample was hand packed to brass sleeve with teflon coverings under caps. Evidence tape was affixed to caps. Sample was recorded on a Chain of Custody and was submitted to lab for analysis. During subsequent excavation, an adjacent tree sloughed into the excavation pit. Sampling was suspended due to site safety concerns.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
  
- . Waste code: F002
- . Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
  
- . Waste code: F003
- . Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Site Screening  
Completed Date: 03/30/1993  
Comments: No further action per EPA's preliminary assessment for this site only determined that its hazard ranking score (hrs) would not admit it into the National Priority List (NPL). Recommendation by dtsc on reevaluation of the site reflects DTSC's own criteria. This 3.6 acre currently active site, mostly paved or landscaped, has been the site of several interests associated with research and development in food, medicine, genetics and biology. Through various leases and subleases, Alza has been the lessee since 1972 and sole operator at the site since March 1986. Sampling since 1987 indicated that surface soil was contaminated with chloroform (520 mg/kg), carbon tetrachloride (250 mg/kg), freon (1.1 mg/kg) and DCE (120mg/kg) and groundwater in the uppermost interconnected aquifers was contaminated with chloroform (4100 mg/kg), carbon tetrachloride and TCE. soil samples also detected presence of chloroform (2000mg/kg). Soil gas and groundwater treatment systems have been in operation at site under oversight of Regional Water Quality Control Board. Deeper potable aquifer of wide use as drinking water source has not been impacted. This site screening was based in part on the CERCLA screening site inspection report prepared by Ecology and Environment for USEPA (contained in DTSC file). DTSC files were reviewed. REQCBA and county files were not located or reviewed. Extent of soil contamination was about 200 sf. groundwater contamination extends at least 200 feet from soil contamination area and one well screened in deeper aquifer detected 1.5 mg/l of chloroform.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Voluntary Cleanup Agreement  
Completed Date: 12/20/2012  
Comments: VCA to review Phase I and Phase II Investigation Reports and to provide comments executed.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Cost Recovery Closeout Memo  
Completed Date: 08/01/2013  
Comments: All work has been completed under the VCA for this site. All cost records should be summarized and closed as of August 30, 2012. A final billing should be prepared and sent to the Project Proponent.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: No Further Action Letter  
Completed Date: 07/29/2013  
Comments: No visual impacts, odors, or photo-ionization detector detections were observed in the soil. No chemical of concern concentrations were detected above site screening criteria in soil. No visual or odor detections were reported in the groundwater samples. Only benzene was detected at concentrations exceeding groundwater screening level. Benzene, freon, 1, 3-butadiene, and trichloroethylene (TCE) were detected in the soil gas; however, only benzene and 1,3-butadiene exceeded the screening level. DTSC determined that the human health risk for these chemicals of concern, based on the maximum detected concentrations is approximately 1x 10<sup>-6</sup>, well within the acceptable risk range for residential land use.

Completed Sub Area Name: Not reported  
Completed Document Type: Voluntary Cleanup Agreement  
Completed Date: 12/20/2012  
Comments: VCA to review Phase I and Phase II Investigation Reports and to provide comments executed.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Cost Recovery Closeout Memo  
Completed Date: 08/01/2013  
Comments: All work has been completed under the VCA for this site. All cost records should be summarized and closed as of August 30, 2012. A final billing should be prepared and sent to the Project Proponent.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: No Further Action Letter  
Completed Date: 07/29/2013  
Comments: No visual impacts, odors, or photo-ionization detector detections were observed in the soil. No chemical of concern concentrations were detected above site screening criteria in soil. No visual or odor detections were reported in the groundwater samples. Only benzene was detected at concentrations exceeding groundwater screening level. Benzene, freon, 1, 3-butadiene, and trichloroethylene (TCE) were detected in the soil gas; however, only benzene and 1,3-butadiene exceeded the screening level. DTSC determined that the human health risk for these chemicals of concern, based on the maximum detected concentrations is approximately  $1 \times 10^{-6}$ , well within the acceptable risk range for residential land use.

Violation Source: CERS

Site ID: 56010  
Site Name: PENINSULA ENDODONTICS DENTAL GROUP  
Violation Date: 01-29-2014  
Citation: HSC 6.67 Multiple - California Health and Safety Code, Chapter 6.67, Section(s) Multiple

Violation Description: Haz Waste Generator Program - Operations/Maintenance - General  
Violation Notes: Returned to compliance on 11/20/2014. Container holding gluteraldehyde was noted as open, with funnel in bung hole, without waste being added or removed. CONTAINER WAS CLOSED DURING THE INSPECTION. PLEASE KEEP CONTAINER CLOSED EXCEPT WHEN ADDING WASTE. NO CORRECTIVE ACTION REQUIRED.

Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Evaluation:

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 01-29-2014  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Endodontic practice that generates small amounts of spent fix and developer from glove box developer (infrequently used, only when digital not detailed enough). Use gluteraldehyde for sterilization along with steam autoclave. Gluteraldehyde stored in 5 gallon bucket. Spent fix and developer stored in 1 gallon containers each. Ultrasonic solution is ESMA E589 solution. pH at concentrate is below 12.5, MSDS does not indicate toxicity. Solution is flushed to drain after use. Service provided by Stericycle quarterly. Reviewed receipts (manifests) for 2013 and 2012. Reviewed amalgam disposal receipts for 2013 and 2012 Emergency info posted in office, near phone, on back of door.

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D018
- . Waste name: BENZENE

File Location:                    All Files are on GeoTracker or in the Local Agency Database  
Local Case Number:               06S3W11A02f  
Potential Media Affect:         Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Gasoline  
Site History:                      1986 3 underground storage tanks (USTs) were removed from the site. 6 soil samples were reported to have been collected and analyzed for Total Petroleum Hydrocarbons and reported to have a maximum concentration of 27 parts per million (ppm). All other site developments were also removed and the site remained vacant and undeveloped. 1988 In June, 3 soil samples (#1 through #3) were collected between 2.5-3 feet below the ground surface (ft bgs) near the dispenser islands and were reported to have maximum concentrations of 460 ppm Total Petroleum Hydrocarbons as Gasoline, 3.0 ppm Toluene, 17 ppm Ethylbenzene, and 84 ppm Xylenes. In September, 4 borings were advanced onsite near sample #3, which was reported with the highest concentrations of contaminants. One soil sample was collected from each boring at depths of 4-5 feet and an additional sample was collected at 9 ft bgs in the boring closest to the location of #3. Maximum concentrations were reported of 670 ppm TPHg, 0.5 ppm Benzene, 0.9 ppm Toluene, 8.6 ppm Ethylbenzene, and 49 ppm Xylenes. 1989 In January, 1 monitoring well (MW1) was advanced to approximately 45 ft bgs and groundwater was encountered around 31 ft bgs. 6 soil samples were collected and reported to have maximum concentrations of 4,200 ppm TPHg, 9 ppm Benzene, 110 ppm Toluene, 52 ppm Ethylbenzene, and 260 ppm Xylenes. The initial groundwater sample

collected from this well was reported to contain 1,700 parts per billion (ppb) TPHg, 65 ppb Benzene, 7.1 ppb Toluene, 5.4 ppb Ethylbenzene, and 56 ppb Xylenes. 1990 In November, it was reported that approximately 8-inches of free product (FP) was measured in well MW1. 1991 In July, two monitoring wells were installed along the property boundary on the parcel immediately north of the site (1705 El Camino Real). Only 1 soil sample was collected from MW2 at 12 ft bgs and was not reported to contain TPHg, Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX). Groundwater samples were collected from each well and MW2 was not reported to have TPHg and BTEX above the laboratory reporting limits and MW1 was reported to contain 4,700 ppb TPHg, 120 ppb Benzene, 63 ppb Toluene, 11 ppb Ethylbenzene, and 500 ppb Xylenes. 1992 In May, 3 wells (MW2 through MW4) were advanced onsite to 51-55.5 ft bgs. 12 soil samples were collected and reported highest concentrations in the samples collected from 30.5 ft bgs and maximum concentrations of 2,900 ppm TPHg, 6.8 ppm Benzene, 17 ppm Toluene, 11 ppm Ethylbenzene, and 64 ppm Xylenes. Periodic monitoring of the wells commenced. 1993 In January, FP was now being measured in well MW2 in addition to well MW1. It was reported that well MW2 contained over 2 feet of FP. FP bailing was conducted on a monthly basis. Disposition and total volume of FP removed from the wells was not reported. 1994 In February, 2 offsite wells (MW5 and MW6) and 1 onsite extraction well (EW1) were installed. 4 soil samples were collected in the offsite wells and were not reported to have concentrations of TPHg, BTEX and TPH as Diesel (TPHd) above the laboratory reporting limits. 3 soil samples were collected from well EW1 and reported to have low concentrations of TPHg and BTEX. The new wells were added to the groundwater monitoring program. In March, a soil vapor extraction test was conducted at the site. In April, a skimmer was placed in well MW1 to collect FP. In September, extraction well EW2 was installed onsite for extraction of vapor and groundwater to a depth of 40 feet. 8 soil samples were collected and not reported to have concentrations of the Constituents of Concern (COCs) present above the laboratory reporting limits. 1995 In June, a dual vapor and groundwater extraction system began operation onsite. 1996 In February, 2 extraction wells (EW3 and EW4) were installed to 40 ft bgs. 6 soil samples were collected and reported maximum concentrations of 888 ppm TPHg, 48.7 ppm TPHd, 7.9 ppm Benzene, 2.3 ppm Toluene, 11.2 ppm Ethylbenzene, and 21.74 ppm Xylenes. 1997 In March, a soil vapor extraction well (EW5) was installed to 30 ft bgs. 2 soil samples were collected and reported to have maximum concentrations of 170 ppm TPHg and low concentrations of BTEX and 1,2-Dichloroethane (DCA). Methyl tert-Butyl Ether (MtBE) was not reported to be present in the samples above the laboratory reporting limits. In August, 9 sparge wells (SP1 through SP9) were installed onsite to 45 ft bgs. Subsequently, an air sparge test was conducted. It was not reported that soil samples were collected for chemical analysis. In October, air sparging started in conjunction with the vapor and groundwater extraction. 2000 In June, remediation activities stopped at the site. It is estimated that the soil vapor extraction removed 1,273 pounds of hydrocarbons and approximately 4,658,440 gallons of groundwater were extracted at the site. In December, 6 soil borings (B1 through B6) were advanced onsite. Boring B2 and B3 were completed as groundwater monitoring wells (MW7 and MW8, respectively) to 40 ft bgs. 24 soil samples were collected and reported to contain maximum concentrations of 2,400 ppm TPHg, 5.6 ppm Benzene, 58 ppm Toluene, 22 ppm Ethylbenzene, 140 ppm Xylenes, 0.15

MAP FINDINGS

**ULTRAMAR C/O HORIZON ENVIRONME (Continued)**

**U001595953**

ppm MtBE, and 0.11 ppm Tert Butyl Alcohol (TBA). 2001 In January, a dual phase extraction (DPE) test was conducted at the site. In November, groundwater extraction recommenced at the site. And soil vapor extraction began again on January 25, 2002. 2002 In June, 2 vapor extraction wells (VW3 and VW4) were installed. 4 soil samples were collected and reported to have low to non-detectable concentrations of the COCs. 2004 In September, well EW5 and MW6 were destroyed. Well EW5 was historically dry and well MW6 was historically non-detect for COCs. 2005 In April, 15 confirmation soil borings (CB1 through CB15) were advanced onsite. 58 soil samples were collected and reported maximum concentrations of 5,400 ppm TPHg, 16 ppm Benzene, 71 ppm Toluene, 40 ppm Ethylbenzene, and 380 ppm Xylenes. The highest concentrations of TPHg and Benzene were reported in soil samples collected between 30-35 ft bgs from borings in the south-central portion of the site. Groundwater was encountered between 34-35 ft bgs. In July, a Tier 2 Risk Based Correction Action (RBCA) analysis was completed for the site. Soil and groundwater data collected since January 2005 were used and the mean concentrations were determined to be Benzene at 5,000 ppb in groundwater and 2.3 ppm in soil and TPHg at 22,000 ppb in groundwater and 710 ppm in soil. The assessment included a point of exposure being a well located approximately 600 feet away from the site. The most restrictive Site Specific Threshold Level (SSTL) was to protect the well with a proposed cleanup level of 200 ppb Benzene in groundwater and 0.51 ppm Benzene in soil. Additionally, it calculated a SSLT for soil volatilization to indoor air of 0.63 ppm Benzene. These SSTLs were recommended as site cleanup levels. In August, 16 wells for remediation (VW9 through VW17, VW20, VW22 through VW24, and SW9 through SW11) were advanced in the area of the proposed building onsite. 45 soil samples were collected and reported to contain maximum concentrations of 12,000 ppm TPHg, 67 ppm Benzene, 280 ppm Toluene, 140 ppm Ethylbenzene, and 700 ppm Xylenes. In December, 18 electrodes (38 ft bgs), 13 dual vacuum extraction wells (45 ft bgs) and 4 thermo-wells (38 ft bgs) were installed onsite. 2006 In March, Six-Phase Heating (SPH) Technology was implemented at the site and was completed in September. The SPH technology is a thermally-enhanced dual phase extraction (DPE) technique that targets both contaminated soil and groundwater. It uses electrical energy resistively to heat the soil and groundwater to the boiling point of water. Contaminants are mobilized by direct volatilization and in-situ steam stripping, removed by DPE and treated via Catalytic Oxidation (CATOX). In April, it was discovered that FP was present in a vacuum extraction well. The FP was bailed from the well. An additional vacuum thermal oxidizer (Thermox) unit was brought on site to remove FP from wells VE4, 5, 6, and 8. The Thermox units were shut down in September. The volume of FP removed was not reported. In August, 8 confirmation soil borings (WS1 through WS6 and CES1 and CES2) were advanced onsite to maximum depths of 36 feet. Groundwater was encountered around 32 ft bgs in the borings. Grab groundwater samples were collected from borings WS1 and WS2. In September, 5 additional remedial wells (RW30-RW34) were installed to 35-40 ft bgs in order to augment the ongoing remedial efforts. DPE continued after September when the Thermox systems and heating were discontinued. DPE ceased in November. It is estimated that from March through November, 44,541 pounds of hydrocarbons in vapor were removed from the subsurface. In November, 7 confirmation soil borings (RCB1 through RCB7) were advanced to 35 ft bgs onsite. 15 soil samples were

collected between 20-35 ft bgs and were reported to have low to non-detectable concentrations the COCs. Also at this time the 18 electrode wells, 4 thermocouple wells, 4 groundwater monitoring wells (MW3, MW4, MW7 and EW4), and 24 other remedial wells, and 7 remedial wells were destroyed. All site wells were destroyed in order for site development activities to commence. 2007 In January, 4 temporary soil gas sampling probes (SG1 through SG4) were advanced for the collection of soil gas samples from depths of approximately 5 and 10 ft bgs within the footprint of the building; except for SG2, which was advanced in the covered parking area attached to the building. Maximum concentrations of 2,300,000 micrograms per cubic meter (a%/m3) TPHg and 270a%/m3 Benzene in samples collected from 10 ft bgs in borings SG2 and SG3. The TPHg concentration in SG2 reduced to 450,000 a%/m3 in the 5 foot sample and the Benzene concentration in SG3 reduced to below the laboratory reporting limit in the 5 foot sample. Clear decreasing trends were seen in all 4 soil gas sampling locations with shallower depth of sample. The report concluded Based on the soil gas data collected, future site usage and remediation conducted it is Horizons opinion that no health risk from vapor intrusion to enclosed space of the proposed building exists at this site and this health risk pathway is closed. 2008 In October, 3 monitoring wells (PRMW1 through PRMW3) were advanced to 40 ft bgs onsite. These wells were installed following completion of site development activities and were used for groundwater rebound monitoring. 12 soil samples were collected and reported to have very low to non-detectable concentrations of COCs. Quarterly groundwater monitoring restarted at the site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Latitude: 37.433004222  
 Longitude: -122.1282954  
 Status: Open - Site Assessment  
 Status Date: 04/26/2018  
 Case Worker: AC  
 RB Case Number: 13-033  
 Local Agency: SANTA CLARA COUNTY LOP  
 File Location: All Files are on GeoTracker or in the Local Agency Database  
 Local Case Number: 06S2W06N01f  
 Potential Media Affect: Other Groundwater (uses other than drinking water)  
 Potential Contaminants of Concern: Gasoline  
 Site History:

In 1998, Einarson, Fowler, & Watson conducted a Phase I/Phase II investigation of the Site at the request of the property owner. The investigation included the advancement of 6 soil borings at the Site (SAF-1 to SAF-6). Maximum concentrations of total petroleum hydrocarbons as gasoline range organics (TPH-GRO) and benzene, toluene, ethylbenzene, and total xylenes (BTEX compounds) in soil were detected in boring SAF-1 located in the vicinity of the former underground storage tanks (USTs), at 2,200 milligrams per kilogram (mg/kg), 2.6 mg/kg, 5.3 mg/kg, 20 mg/kg, and 64 mg/kg, respectively. Maximum concentrations of TPH-GRO and BTEX compounds in groundwater were detected at 130,000 micrograms per liter ("g/L) (boring SAF-6), 9,400 "g/L (boring SAF-1), 1,900 "g/L (boring SAF-1), 7,300 "g/L (boring SAF-6), and 24,000 "g/L (boring SAF-6), respectively. Boring SAF-6 is on the southern edge of the former station building in the area of the former waste oil UST. In 1999, 3 groundwater monitoring wells (MW-1, MW-2, and MW-3) were installed on-site by Eriker and Kalinowski, Inc. at the request of the property owner. The highest benzene concentration in groundwater was detected in well MW-1 at 208 "g/L. Dissolved TPH-GRO and methyl tertiary-butyl ether (MtBE) were below detection limits in all three wells at the time of sampling. The highest concentrations of benzene and TPH-GRO detected in soil samples collected during this investigation were 0.077 mg/kg (MW-1 at 6.5 feet bgs) and 11.9 mg/kg (MW-3 at 6 feet bgs), respectively. At the request of the Santa Clara Valley Water District (SCVWD), Chevron began quarterly groundwater monitoring in Third Quarter 2002. The highest concentration of TPH-GRO was detected in well MW-2 at 13,000 "g/L on October 15, 2003. The highest concentration of benzene was detected in well MW-3 at 280 "g/L on July 30, 2005. MtBE has not been detected in any groundwater samples collected from Site wells based on analysis by US Environmental Protection Agency (EPA) Method 8260B. On June 25, 2004, Stantec installed 3 soil borings (SB-1, SB-2, and SB-3) to assess the extent of petroleum hydrocarbons in soil and groundwater down-gradient of the Site. TPH-GRO was detected at a maximum concentration of 1,400 mg/kg in a soil sample collected from borehole SB-3 at 11.5 feet bgs. Benzene was detected at a maximum concentration of 0.004 mg/kg in a soil sample collected from borehole SB-3 at 8.5 feet bgs. The highest concentration of TPH-GRO in

groundwater was detected at 13,000 "g/L in a sample collected from borehole SB-1. The highest concentration of benzene in the groundwater was detected at 1,500 "g/L in a sample collected from borehole SB-1. From December 22, 2005 to June 17, 2006, Stantec advanced 11 soil borings (SB-3 through SB-13), and installed three groundwater monitoring wells (MW-4, MW-5, and MW-6) and two soil vapor monitoring wells (VW-1 and VW-2) at the Site and the adjacent commercial property (702 Colorado Avenue, Palo Alto, CA). Two additional investigation boreholes (A-1 and A-2) were advanced to verify the status of the former Site USTs. TPH-GRO was detected at a maximum concentration of 1,400 mg/kg in a soil sample collected from borehole SB-5 at 15.5 feet bgs. Benzene was detected at a maximum concentration of 0.065 mg/kg in a soil sample collected from borehole SB-12 at 11.5 feet bgs. The highest concentrations in groundwater of TPH-GRO (82,000 "g/L) and benzene (970 "g/L) were detected in grab groundwater samples from boreholes SB-9, and SB-12, respectively. During this investigation it was confirmed that the former Site USTs were no longer present. On September 7, 2007, and September 4, 2008, soil vapor samples were collected from vapor monitoring wells VW-1 and VW-2 to evaluate the potential indoor air risks to occupants of the University Investments building. The soil vapor monitoring wells are located on-site adjacent to the University Investments building in the vicinity of where the highest concentrations of volatile organic compounds (VOCs) in soil and groundwater samples have historically been detected. All soil vapor samples were collected using 100% certified 6-liter Summa canisters over a 30 minute period at approximately 167 milliliters per minute (mL/min). Benzene concentrations in the soil vapor samples collected from vapor well VW-2 in 2007 and 2008 exceeded the screening levels for commercial receptors; however, the maximum benzene concentration detected in groundwater near VW-2 (collected from well MW-1) was more than an order of magnitude less than the environmental screening level (ESL) for the vapor intrusion pathway (170 "g/L vs. 1,816 "g/L). This suggests that the vapor may be coming from the soil, although no benzene was detected in soil samples collected from soil borings SB-7 and SB-9 from 5 to 19.5 feet bgs. In October 2008, Stantec advanced three exploratory soil borings (SB-14, SB-15, and SB-16) and installed four groundwater monitoring wells (MW-7 and MW-8) off Site to further define the vertical and lateral extent of petroleum hydrocarbons in soil and groundwater down gradient (northeast) of the Site. Additional offsite investigation was conducted in June 2010. In June 2009 - 3 soil vapor monitoring wells (VW3 through VW5) were installed onsite.

Violation Date: 11-09-2017  
Citation: HSC 6.5 25189.5(a),25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a),25201(a)

Violation Description: Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to HSC 6.5.

Violation Notes: Facility switched to a powdered tartar and stain remover and employees were not aware that this new product contains sulfamic acid. A test batch of the liquid had a pH of 0 during the inspection. Employees have been disposing of this corrosive hazardous waste to the sanitary sewer system. Cease disposal of this corrosive liquid to the sink. Begin collecting this waste in a closed, labeled container. Ms. Akiona was given a label for this material at the time of inspection.

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Facility generates waste glutaraldehyde cold sterile solution. Facility has roughly 1x5 gallon container of waste glutaraldehyde on-site. Receipts show that the facility disposes of this waste annually (manifests reviewed). Facility uses steam autoclave only. Ultrasonic bath uses enzymatic tablets. Surfaces are disinfected with non-saturated cavicide wipes. Facility also uses Birex spray and manages inventory closely so this material is used before expiration. Facility does not generate hazardous waste from tray cleaning and uses mostly whitening strips. Amalgam separator waste is mailed back annually through Pristine ES and chair traps are stored in a 1x5 gallon labeled container and picked up on-site (receipts reviewed). The following violations were corrected at the time of inspection: G020 Marking of hazardous waste: 1x5 gallon container of waste glutaraldehyde was marked as "oil and water". Label was corrected during inspection and manifests correctly show waste [Truncated]

Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D004

**FINDS:**

Registry ID: 110055523250

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spent solutions are collected in labeled 1.5 gallon containers, with pick up service provided by PhotoWaste Recycling as needed. Lead foil from back of bites also picked up by PWR. Amalgam trap located under sink in work area. Doctor does not do amalgam fillings, only composite/resins. Sterilize using both steam and cold sterile solution. Utilizing gluteraldehyde based solution, mix with baking soda prior to disposing to sink once sterilization efficacy is reduced. Utilizing Birex and pre-impregnated quat ammonia wipes for surface disinfection.

 Baseline Flow: 0  
 Reclamation: Not reported  
 POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

**CALIFORNIA AVENUE HOUSING PHASE II SITE (Continued)**

**S103982804**

Completed Document Type: Preliminary Endangerment Assessment Report  
Completed Date: 12/13/2013  
Comments: Based upon the review and evaluation of the site environmental assessment and investigation reports, DTSC concluded the Site would not pose a significant threat to human health or the environment under residential land use and determined that no further action is necessary with respect to investigation of hazardous substances releases at the Site. However, an investigation that has been performed on the adjacent 1601 California Avenue property indicates a release of hazardous substances may have occurred on the property. Further investigation is to be conducted and may indicate additional sampling is needed to determine the extent that TCE soil gas and groundwater plumes have migrated from the 1601 California Avenue property.

CERS HAZ WASTE:  
Site ID: 110388  
CERS ID: 10352137  
CERS Description: Hazardous Waste Generator

Evaluation:  
Eval General Type: Compliance Evaluation Inspection  
Eval Date: 07-14-2015  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: Practice is general dentistry. Utilize film for x-rays. Spent develop and fix solutions are collected in 5-gallon container. Vendor provided label affixed to container (missing start date, but not required of silver only CESQGs). Lead foil is collected in a pan and then picked up by Photo Waste Recycling Amalgam not used for fillings, do have amalgam trap. Serviced by PWR. Sterilization via steam autoclave. Spot

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Historical Generators:

Date form received by agency: 02/22/2006

Site name: BP WEST COAST PRODUCTS LLC 4430  
Classification: Large Quantity Generator

. Waste code: 134  
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 343  
. Waste name: Unspecified organic liquid mixture

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018  
. Waste name: BENZENE

Violation Status: No violations found

 Local Agency: Not reported  
 File Location: All Files are on GeoTracker or in the Local Agency Database  
 Local Case Number: 06S2W07C02f  
 Potential Media Affect: Surface water  
 Potential Contaminants of Concern: Gasoline  
 Site History: Former ARCO Service Station No. 4430 (the site) is currently an inactive retail service station. Prior to facility closure activities, a station building, two service bays with hydraulic hoists, four fuel dispensers, three 12,000 gallon double walled fiberglass gasoline underground storage tanks (USTs), and one 550 gallon double walled fiberglass waste oil UST were present on the site. Product dispensers, piping, hoists, and USTs were removed from the site on July 21, 2005. The site location map; site plan;

groundwater elevation contour map; groundwater concentration map; and groundwater flow direction rose diagram are presented as Figures 1 through 5, respectively. All monitoring and sampling activities at the site during the second quarter 2009 were performed by Stantec. The current groundwater sampling field data and standard procedures for groundwater sampling are presented in Attachment A. The sampling point designated Trench was not gauged as the groundwater sampling technician was unable to access the survey point. However, a grab groundwater sample was obtained from the trench at a point adjacent to the survey point. The groundwater samples collected were submitted under COC protocol to Calscience Environmental Laboratories, Inc., a California state certified laboratory. Samples were analyzed for the presence of GRO (C6-C12) by Environmental Protection Agency (EPA) Method 8015B; benzene, toluene, ethylbenzene, and total xylenes (collectively BTEX); di-isopropyl ether; ethanol; ethyl tert-butyl ether; MtBE; tert-amyl methyl ether; TBA; 1,2-dibromoethane; and 1,2-dichloroethane by EPA Method 8260B. Water generated during well purging and sampling and equipment cleaning was pumped into a truck-mounted water tank. Stantec transported the Non-Hazardous waste under a manifest to a central holding tank located at ARCO Service Station No. 2144, 1100 Tully road, San Jose, California. The water will subsequently be transported by Belshire Environmental Services to a California certified waste handling facility, for proper disposal. At the time of this report the central holding tank has not yet been emptied for disposal. Waste disposal documentation for the second quarter 2009 will be included in the next groundwater monitoring and sampling report. In the Quarterly Groundwater Monitoring Report Third Quarter 2007, this site was recommended for no further action status based on current and recent historical groundwater concentrations. Concentrations of GRO, benzene and MtBE onsite continue to follow decreasing concentration trends. Stantec looks forward to the SCCDEHs response.

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS HAZ WASTE:  
Site ID: 133855  
CERS ID: 10347241  
CERS Description: Hazardous Waste Generator

Evaluation:  
Eval General Type: Compliance Evaluation Inspection  
Eval Date: 04-17-2014  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: Dental practice that uses digital x-rays and composite fillings.  
Generate waste from static tray sterilization using ethanol. Ethanol stored under sink in 5 gallon container with HW label (no ASD, but not required as CESQG). Container, once full, is shipped as waste. Manifest form 2012 for shipment was reviewed. TSDf copy noted. Amalgam trap in basement, shared with neighboring practice. Trap contents consolidated to 5 gallon bucket, shipped as Universal Waste to ATS. Logs of service posted. Receipts for management/shipment of amalgam reviewed (generally 4-6 month intervals). Training on UW safe handling provided to facility personnel. Also do monthly OSHA/HIPPA training based on topic of month in newsletter as well as annual bloodborne and PPE training. BB/PPE training is scheduled for 4/14.

Environmental Interest/Information System  
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

would be no significant risk to future residents based on the future development plans.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Risk Assessment Report  
Completed Date: 04/04/2016  
Comments: The Supplemental Investigation and Risk Assessment indicates there will not be a significant risk to future site users (residents, site visitors), based on the proposed redevelopment layout. Future residences are not to be constructed over the area where a soil vapor plume of trichloroethylene (TCE) remains in soil vapor at depths of greater than 25 feet below ground surface. Based on the proposed redevelopment plan, this area will be an open park space. Polychlorinated biphenyls in soil at concentrations above the residential screening level were excavated and removed from the site.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Preliminary Endangerment Assessment Report  
Completed Date: 01/29/2018  
Comments: The Preliminary Endangerment Assessment (PEA) Report provides historical and current information regarding environmental conditions at the Site, an evaluation of the potential risk to human health and the environment, and recommends additional measures to reduce the potential risk. No further action was determined to be needed for areas of the Site planned for construction of housing. Elevated concentrations of trichloroethylene were found in soil vapor in the discrete open park area (located in the center of the Site). The PEA Report recommends placing a land use covenant (LUC) on the discrete open park area to restrict and manage future land use. Stanford will enter into a LUC with DTSC, and provide protocols for the monitoring and management of the discrete open park area use in a Post Development Management Plan, which shall be reviewed and approved by DTSC.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Fact Sheets  
Completed Date: 05/13/2016  
Comments: Fact sheet detailing current status of project site: Supplemental Investigation and Risk Assessment has been approved by DTSC, which discusses the presence of trichloroethylene (TCE) in soil vapor and risk assessment findings.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Technical Report  
Completed Date: 07/01/2015  
Comments: The report documents investigation and remediation activities that were performed to address the release of polychlorinated biphenyls (PCBs) reported by Hewlett Packard Scientific Instruments Division in 1987. More than 33,300 tons of PCB impacted soil was removed from the Site and disposed at permitted non-hazardous and hazardous waste landfills. The investigation and remediation activities documented in the report were performed prior to DTSC's involvement with the Site.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Technical Report  
Completed Date: 12/01/2015  
Comments: The document is an addendum to the previous report documenting investigation and remediation of soil impacted by polychlorinated biphenyls (PCBs). Additional excavation of PCB-impacted soil was completed on eastern boundary of the Site. This soil was not previously removed due to structural stability concerns related to an adjacent parking lot. DTSC did not oversee the additional soil removal.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Voluntary Cleanup Agreement  
Completed Date: 08/19/2015  
Comments: DTSC entered into a Voluntary Cleanup Agreement with the Board of Trustees of Leland Stanford Junior University, Office of Stanford Real Estate to review documentation of prior Site remediation and to oversee a Preliminary Endangerment Assessment.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Correspondence  
Completed Date: 03/18/2016  
Comments: DTSC received questions and comments in letters and via email from the College Terrace Residents Association (CTRA) and the Center For Public Environmental Oversight (CPEO) on January 26, 2016. DTSC, in coordination with Stanford University and Haley & Aldrich, provided responses to CTRA's and CPEO's questions and comments via email on March 18, 2016.

Description:	RP states that .25 cup of uraning dye was mixed with approx 1500 gallons of water to mitigate a grease blockage in a storm drain. The release is not contained and is traveling down the storm drain system which leads to Matadero Creek. The creek has not been impacted yet. Crews are in the process of diking off the storm drain to prevent the creek from being impacted.

. Waste code: D000  
. Waste name: Not Defined

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D008  
. Waste name: LEAD

. Waste code: F001  
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

Site ID: 396679  
Site Name: Lockheed Martin SSC-F2 B/245  
Violation Date: 12-05-2017  
Citation: 22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52  
Violation Description: Failure to include all of the following in the Contingency Plan: description of actions personnel will take in response to a release or emergency, arrangements with local authorities, list of emergency coordinators including name, addresses & phone numbers, list of emergency equipment and their physical description, location and capabilities, evacuation plan, and OES phone number. (If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions.)  
Violation Notes: 1) The Contingency Plan does not address the following required elements: - a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required, the location and a physical description of each item on the list, and a brief outline of its capabilities. Note that the Plan's cross-reference identifies Annex 7 as containing a list of all emergency equipment, but no list is included in Annex 7 or elsewhere in the Plan. - an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan shall describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires). Note that the Plan's cross reference list identifies Section 2.1 as [Truncated]

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 12-21-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: UNRESOLVED ISSUE: 1) The majority of the fire extinguishers are marked with a monthly visual inspection tag (observed 3 throughout the buildings with no monthly visual inspection tag), but are marked with an annual maintenance tag dated 2015. The zip tags on the extinguishers are also identifies as 2015. Provide documentation that all fire extinguishers are being annually maintained in accordance with all requirements [22CCR 66265.33]. NOTES TO FACILITY: 1) Molybdenum metal shavings and fines are generated by the hand saw in Room 290. Ensure that molybdenum metal shavings are either collected and managed as scrap metal if they meet the definition of "scrap metal" per 22CCR 66260.10 or collected and managed as hazardous waste [HSC 25189.5]. 2) Ensure that the following required elements are included in employee hazardous waste training records: 1) the name and job title of each person in a position that has hazardous waste management responsibility; 2) a written job [Truncated]

Citation: 22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52

Violation Description: Failure to include all of the following in the Contingency Plan: description of actions personnel will take in response to a release or emergency, arrangements with local authorities, list of emergency coordinators including name, addresses & phone numbers, list of emergency equipment and their physical description, location and capabilities, evacuation plan, and OES phone number. (If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions.)

Violation Notes: 1) The Contingency Plan does not address the following required elements: - a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required, the location and a physical description of each item on the list, and a brief outline of its capabilities. Note that the Plan's cross-reference identifies Annex 7 as containing a list of all emergency equipment, but no list is included in Annex 7 or elsewhere in the Plan. - an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan shall describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires). Note that the Plan's cross reference list identifies Section 2.1 as [Truncated]

Eval Date: 12-21-2017  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection beginning on 12/5/2017 and completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 203, and 245 and operates under EPA ID Number CAD009129354. Minimal amounts of hazardous waste is generated in this building at the time of inspection. The only hazardous waste stream observed is solvent (IPA, MEK) contaminated wipes. Hazardous waste is transferred to general hazardous waste accumulation area weekly. See violation G020 in the inspection report issued for building 245 regarding container labeling. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Notes: On-site for a routine hazardous waste inspection. This inspection began on 12/5/2017 and was completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 206, and 245 and operates under EPA ID Number CAD009129354. Observed used oil and "used coolant" generated in the Machine Shop at the time of inspection and accumulating in the fenced-off used oil and maintenance hazardous waste accumulation area located outside the facility. Metal scraps are collected and managed as scrap metal. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection. This inspection began on 12/5/2017 and was completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 206, and 245 and operates under EPA ID Number CAD009129354. Observed used oil and "used coolant" generated in the Machine Shop at the time of inspection and accumulating in the fenced-off used oil and maintenance hazardous waste accumulation area located outside the facility. Metal scraps are collected and managed as scrap metal. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Notes:	On-site for a routine hazardous waste inspection beginning on 12/5/2017 and completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 203, and 245 and operates under EPA ID Number CAD009129354. Minimal amounts of hazardous waste is generated in this building at the time of inspection. The only hazardous waste stream observed is solvent (IPA, MEK) contaminated wipes. Hazardous waste is transferred to general hazardous waste accumulation area weekly. See violation G020 in the inspection report issued for building 245 regarding container labeling. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 12-21-2017  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection beginning on 12/5/2017 and completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 203, and 245 and operates under EPA ID Number CAD009129354. Minimal amounts of hazardous waste is generated in this building at the time of inspection. The only hazardous waste stream observed is solvent (IPA, MEK) contaminated wipes. Hazardous waste is transferred to general hazardous waste accumulation area weekly. See violation G020 in the inspection report issued for building 245 regarding container labeling. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection. This inspection began on 12/5/2017 and was completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 206, and 245 and operates under EPA ID Number CAD009129354. Observed used oil and "used coolant" generated in the Machine Shop at the time of inspection and accumulating in the fenced-off used oil and maintenance hazardous waste accumulation area located outside the facility. Metal scraps are collected and managed as scrap metal. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection beginning on 12/5/2017 and completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 203, and 245 and operates under EPA ID Number CAD009129354. Minimal amounts of hazardous waste is generated in this building at the time of inspection. The only hazardous waste stream observed is solvent (IPA, MEK) contaminated wipes. Hazardous waste is transferred to general hazardous waste accumulation area weekly. See violation G020 in the inspection report issued for building 245 regarding container labeling. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Notes: On-site for a routine hazardous waste inspection. This inspection began on 12/5/2017 and was completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 206, and 245 and operates under EPA ID Number CAD009129354. Observed used oil and "used coolant" generated in the Machine Shop at the time of inspection and accumulating in the fenced-off used oil and maintenance hazardous waste accumulation area located outside the facility. Metal scraps are collected and managed as scrap metal. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Notes:	On-site for a routine hazardous waste inspection beginning on 12/5/2017 and completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 203, and 245 and operates under EPA ID Number CAD009129354. Minimal amounts of hazardous waste is generated in this building at the time of inspection. The only hazardous waste stream observed is solvent (IPA, MEK) contaminated wipes. Hazardous waste is transferred to general hazardous waste accumulation area weekly. See violation G020 in the inspection report issued for building 245 regarding container labeling. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection beginning on 12/5/2017 and completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 203, and 245 and operates under EPA ID Number CAD009129354. Minimal amounts of hazardous waste is generated in this building at the time of inspection. The only hazardous waste stream observed is solvent (IPA, MEK) contaminated wipes. Hazardous waste is transferred to general hazardous waste accumulation area

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 12-21-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes:

On-site for a routine hazardous waste inspection. This inspection began on 12/5/2017 and was completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 206, and 245 and operates under EPA ID Number CAD009129354. Observed used oil and "used coolant" generated in the Machine Shop at the time of inspection and accumulating in the fenced-off used oil and maintenance hazardous waste accumulation area located outside the facility. Metal scraps are collected and managed as scrap metal. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Notes: On-site for a routine hazardous waste inspection beginning on 12/5/2017 and completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 203, and 245 and operates under EPA ID Number CAD009129354. Minimal amounts of hazardous waste is generated in this building at the time of inspection. The only hazardous waste stream observed is solvent (IPA, MEK) contaminated wipes. Hazardous waste is transferred to general hazardous waste accumulation area weekly. See violation G020 in the inspection report issued for building 245 regarding container labeling. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Notes: On-site for a routine hazardous waste inspection. This inspection began on 12/5/2017 and was completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 206, and 245 and operates under EPA ID Number CAD009129354. Observed used oil and "used coolant" generated in the Machine Shop at the time of inspection and accumulating in the fenced-off used oil and maintenance hazardous waste accumulation area located outside the facility. Metal scraps are collected and managed as scrap metal. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection. This inspection began on 12/5/2017 and was completed along with the inspection report issuance on 12/21/2017. The building operates as a contiguous hazardous waste facility with buildings 202, 206, and 245 and operates under EPA ID Number CAD009129354. Observed used oil and "used coolant" generated in the Machine Shop at the time of inspection and accumulating in the fenced-off used oil and maintenance hazardous waste accumulation area located outside the facility. Metal scraps are collected and managed as scrap metal. Observations made during the records review portion of this inspection are documented in the Building 245 inspection report.

Reclamation: Not reported  
 POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

CERS Description: Hazardous Waste Generator

Violations:  
Site ID: 40524  
Site Name: JORDAN MIDDLE SCHOOL  
Violation Date: 11-29-2016  
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)  
Violation Description: Failure to keep records of any test results, waste analyses, or other determinations made in accordance with section 66262.11 for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.  
Violation Notes: Returned to compliance on 12/12/2016. Art: excess glazes are rinsed to drain via wash sink. MSDS for products indicate that glazes may contain 0-3% zinc in form of zinc oxide. This is up to 30,000 mg/l zinc, and the regulatory level is 5,000 (or 0.5%).
