<b>Type of Services</b>	<b>Screening Level Phase I Environmental Site Assessment</b>
<b>Location</b>	<b>North Ventura Coordinated Area Plan Palo Alto, California</b>

## SECTION 1: INTRODUCTION

This report presents the results of the Screening Level Phase I Environmental Site Assessment (ESA) performed for the North Ventura Area located in Palo Alto, California (Site) as shown on Figures 1 and 2. This work was performed for David J. Powers & Associates in accordance with our standard Agreement.

### 1.1 PROJECT BACKGROUND

On November 6, 2017 the Palo Alto City Council initiated the preparation of a Coordinated Area Plan for the North Ventura area (NVCAP), an approximately 60 acre site. The NVCAP is being proposed as a result of Program L4.10.1 of the recently adopted Comprehensive Plan, which states: Prepare a coordinated area plan for the North Ventura area and surrounding California Avenue area. The plan should describe a vision for the future of the North Ventura area as a walkable neighborhood with multifamily housing, ground floor retail, a public park, creek improvements and an interconnected street grid. It should guide the development of the California Avenue area as a well-designed mixed use district with diverse land uses and a network of pedestrian-oriented streets.

The City has also received Priority Development Area (PDA) grant funding from the Valley Transportation Authority (VTA) for preparation of the NVCAP. This area includes a parcel owned by the Sobrato Organization, which is commonly referred to as “the Fry’s site.” The Fry’s site and the surrounding parcels included in the proposed planning area represent a significant opportunity to plan for a walkable, mixed-use neighborhood with multifamily housing, commercial services, and well-defined connections to transit, bicycle and pedestrian facilities.

### 1.2 PURPOSE AND SCOPE OF WORK

The purpose of this investigation was to strive to document, to the extent feasible pursuant to the scope of work presented in the Agreement, Recognized Environmental Conditions at the Site based on readily known historical and current land uses and to provide recommendations to further evaluate or mitigate these Recognized Environmental Conditions.

American Society for Testing and Materials (ASTM) E 1527-13, *Standard Practice for Environmental Site Assessments* was used as a guide for development of the project scope. As defined by ASTM E 1527-13, the term Recognized Environmental Condition means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release

to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not Recognized Environmental Conditions.

As presented in our Agreement, the scope of work performed for this Screening Level Phase I ESA included the following:

- A reconnaissance of the Site to note readily observable indications of significant hazardous materials releases to structures, soil or ground water. Our observations were made from public right-of-ways.
- Acquisition and review of a regulatory agency database report of public records for the general area of the Site to evaluate potential impacts to the Site from reported contamination incidents on-Site and at nearby facilities.
- Review of selected documents obtained from the state Geotracker (<http://geotracker.waterboards.ca.gov>) and Envirostor (<http://www.envirostor.dtsc.ca.gov>) databases to obtain information regarding reported on-Site and nearby spill incidents.
- Review of readily available historical aerial photographs to help evaluate past and current Site uses.
- Preparation of a written report summarizing our findings and recommendations.

The limitations for the Screening Level Phase I ESA are presented in Section 7.

### 1.3 ASSUMPTIONS

In preparing this Screening Level Phase I ESA, Cornerstone assumed that all records obtained by other parties, such as regulatory agency databases, maps, related documents and environmental reports prepared by others are accurate and complete. We have not independently verified the accuracy or completeness of any data received.

### 1.4 ENVIRONMENTAL PROFESSIONAL

This Screening Level Phase I ESA was performed by Stason I. Foster, P.E. and Ron L. Helm, C.E.G., environmental professionals who meet the qualification requirements described in ASTM E 1527-13 and 40 CFR 312 § 312.10 based on professional licensing, education, training and experience to assess a property of the nature, history and setting of the Site.

## SECTION 2: USER PROVIDED INFORMATION

The ASTM standard defines the User as the party seeking to use a Phase I ESA to evaluate the presence of Recognized Environmental Conditions associated with a property. For the purpose of this Screening Level Phase I ESA, the User is David J. Powers & Associates.

### 2.1 SPECIALIZED KNOWLEDGE AND/OR COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The ASTM Standard requires that if the User is aware of any specialized knowledge and/or commonly known or reasonably ascertainable information within the local community about the Site that is material to Recognized Environmental Conditions, such as environmental liens, a

significantly lower purchase price due to the property being affected by hazardous materials, or other conditions that are material to Recognized Environmental Conditions in connection with the Site, it is the User’s responsibility to communicate such information to the environmental professional. Based on our discussions with David J. Powers & Associates, we understand that David J. Powers & Associates does not have such specialized knowledge and/or commonly known or reasonably ascertainable information regarding the Site.

## 2.2 REASON FOR PERFORMING PHASE I ENVIRONMENTAL SITE ASSESSMENT

We performed this Screening Level Phase I ESA to support the David J. Powers & Associates in evaluation of Recognized Environmental Conditions at the Site. This Screening Level Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions at the Site.

## SECTION 3: RECORDS REVIEW

### 3.1 STANDARD ENVIRONMENTAL RECORD SOURCES

Cornerstone obtained a report of federal, state and local regulatory agency database listings within the North Ventura area. Database listings within an approximately 1-mile radius of the North Ventura area also were obtained. The database reports were acquired from Environmental Data Resources (EDR) to evaluate the likelihood of contamination incidents within and near the Site. A list of the database sources reviewed, a description of the sources, and radius maps showing the location of reported facilities relative to the Site are attached in Appendix A (within the North Ventura area) and Appendix B (within an approximately 1-mile radius of the North Ventura area).

A brief summary of selected databases is presented below in Table 1. The database reports in Appendix A and B contain additional details regarding these listings, as well as findings associated with other databases.

**Table 1. Summary of Selected Database Listings**

Database Name and Description	Number of on-Site Listings*	Number off-Site within Approx. 1-mile**
<b>NPL:</b> Also known as Superfund, the National Priority List (NPL) database is a subset of CERCLIS and identifies properties for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.	0	1
<b>LUST:</b> The Leaking Underground Storage Tank (LUST) database contains an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.	10	57
<b>SLIC:</b> The Spills, Leaks, Investigations and Cleanup (SLIC) database contains a list of properties where the Regional Water Quality Control Board is overseeing site investigation and corrective action under the Site Cleanup Program (SCP).	10	20
<b>ENVIROSTOR:</b> The Department of Toxic Substances Control’s (DTSC’s) Envirostor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites; State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.	2	14

Continued on next page.

**Table 1 (continued). Summary of Selected Database Listings**

Database Name and Description	Number of on-Site Listings*	Number off-Site within Approx. 1-mile**
<b>VCP:</b> A list of properties within the Voluntary Cleanup Program (VCP) where the project proponents have requested that DTSC oversee investigation and/or cleanup activities.	0	3
<b>RCRA-LQG:</b> This database includes selective information on facilities that generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.	0 <sup>a</sup>	11
<b>RCRA-SQG:</b> This database includes selective information on facilities that generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.	13	30
<b>CUPA Listings:</b> A listing of sites included in the county's Certified Unified Program Agency (CUPA) database. The unified hazardous materials and hazardous waste regulatory program consolidates associated administration, permits, inspections, and enforcement activities.	28	141
<b>UST:</b> The Underground Storage Tank database contains registered USTs. The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.	0	13
<p><b>Historic UST Databases:</b></p> <p><b>FID UST:</b> The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board.</p> <p><b>HIST UST:</b> A historical listing of UST sites within the Hazardous Substance Storage Container Database.</p> <p><b>SWEEPS UST:</b> Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990s. The listing is no longer updated or maintained.</p> <p><b>RGA LUST:</b> The EDR Recovered Government Archive (RGA) Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists.</p>	5	37
<b>AST:</b> A listing of aboveground petroleum storage tank locations.	1	9
<b>DEED:</b> A list of properties with recorded land use restrictions required by the DTSC Hazardous Waste Management Program (HWMP) as a result of the presence of hazardous substances that remain on property after the facility (or part of the facility) has been closed or cleaned up.	2	4
<b>US INST CONTROL:</b> A US EPA listing of properties with institutional controls in place that are intended to prevent exposure to contaminants remaining on the property.	0	1
<b>US ENG CONTROLS:</b> A US EPA listing of properties with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to eliminate pathways for regulated substances to enter environmental media or effect human health.	0	1

\* Number of listings identified within North Venture Area boundary.

\*\* Number of listings identified outside the North Venture Area boundary within an approximately 1-mile radius.

<sup>a</sup> Three on-Site businesses were identified as former RCRA-large quantity generators.

Note: In some databases, an address may be listed more than once. Adjustments were made to attempt to remove duplicates.

### 3.2 FURTHER REVIEW OF DATABASE LISTINGS

Based on the information presented in the agency database reports, hazardous material spill incidents were reported at several on-Site and nearby locations. The potential for these releases to have impacted on-Site soil, soil vapor or ground water quality was evaluated based on our interpretation of the type and status of the reported incidents, the location of the reported incidents in relation to the Site, and the assumed ground water flow direction.

To obtain additional information regarding selected facilities and spill incidents, a cursory review of readily available documents obtained from the state Geotracker (<http://geotracker.swrcb.ca.gov>) and Envirostor (<http://www.envirostor.dtsc.ca.gov>) databases was performed. Geotracker is a database and geographic information system (GIS) that provides online access to environmental data. It tracks regulatory data about leaking underground storage tank (LUST), Department of Defense, Site Cleanup Program and Landfill facilities. The Envirostor database is maintained by the Department of Toxic Substances Control (DTSC) and contains information on investigation, cleanup, permitting, and/or corrective actions that are planned, being conducted or have been completed under DTSC's oversight. The Envirostor database includes the following facility types: Federal Superfund sites; State Response sites; Voluntary Cleanup sites; and School sites.

Note that a detailed evaluation of each individual property within the North Ventura area was not within the scope of this Screening Level Phase I ESA. Our review of selected readily available documents with the Geotracker and Envirostor databases was conducted to obtain general information regarding the predominant spill incidents that have been reported on and near the Site. Information regarding the predominant reported spill incidents is summarized in Table 2.

**Table 2. Summary of Selected on-Site and Nearby Spill Incidents**

Facility Name and Address	Location	Comments
<b>California Olive Emerson (COE) Study Area</b>		
<b>Hewlett Packard</b> 395 Page Mill Road	On-Site	Within the COE Study Area, volatile organic compound (VOC) impacted ground water from Hewlett-Packard Company (HP) facilities at 395 and 640 Page Mill Road and from Varian Medical Systems, Inc. (Varian) at 601 California Street has co-mingled. The HP property at 395 Page Mill Road is located on-Site, while the HP 640 Page Mill Road and Varian 601 California Street parcels are off-Site (up-gradient with respect to the ground water flow direction).  These three properties are listed as open cases on the SLIC database. The HP property at 395 Page Mill Road is listed on the DEED database indicating that it is subject to land use restrictions. The HP property at 395 Page Mill Road also is subject land use restrictions ( <i>i.e.</i> , Covenant and Environmental Restriction [Document No. 18842554] recorded with Santa Clara County on Mach 14, 2006). This covenant restricts certain uses and activities at the property and requires various notifications.  The off-Site HP property at 640 Page Mill Road also is listed as a National Priorities List (NPL) or Superfund site.  The COE Study Area is further discussed in Section 3.2.1.
<b>Hewlett Packard</b> 640 Page Mill Road	Off-Site	
<b>Varian Medical Systems (Varian)</b> 601 California Street	Off-Site	

**Table 2 (Continued). Summary of Selected on-Site and Nearby Spill Incidents**

Facility Name and Address	Location	Comments
<b>Park Plaza</b> 195 Page Mill Rd. and 2825-2891 Park Boulevard	On-Site	<p>Identified on the SLIC database as “Eligible for Closure.” Due to the presence of VOCs at the property, a vapor mitigation system reportedly was installed at the recently constructed mixed-use development.</p> <p>Also identified as a closed case on the LUST database. Residual petroleum hydrocarbon concentrations reportedly remain on the property.</p>
<b>Southern Pacific</b> 2901 Park Boulevard	On-Site	<p>Identified as open-inactive case on the SLIC database. Limited information from 1981 indicates that a black oily material and elevated metals concentrations were identified in a ditch along the boundary of Southern Pacific Transportation Company property and Hans Imported Car Service.</p>
<b>3045 Park Blvd Development</b> 3045 Park Boulevard	On-Site	<p>Identified as open case on the SLIC database. Prior to redevelopment in the mid-1980s, this parcel and the adjacent northwest lot reportedly were used as a railroad spur and turn-around point for railroad cars for Southern Pacific Railroad. Subsequently it was occupied by Stanford BMW/Lamborghini until 2008, and then by Akins Body Shop of Palo Alto and Hertz Car Rental until approximately 2015. Redevelopment with a new commercial building currently is planned.</p> <p>In soil, petroleum hydrocarbons and metals were detected above the Water Board’s Tier 1 Environmental Screening Levels (ESLs). VOCs and petroleum hydrocarbons also are present in ground water, and VOCs were identified in soil vapor.</p> <p>A vapor intrusion<sup>1</sup> mitigation system reportedly will be included within the design of the proposed building. Limited excavation, capping, and institutional controls are proposed to mitigate impacted soil. Characterization and remedial measures are being overseen by the Santa Clara County Department of Environmental Health (DEH).</p>
<b>Lockheed Martin</b> 3101 Park Boulevard	On-Site	<p>Identified as closed case on the SLIC database. According to a June 2016 email from the Water Board, PCE in ground water was attributed to the regional plume, and Lockheed Martin was not named as a responsible party.</p>

<sup>1</sup> Vapor intrusion is the movement of chemical vapors from contaminated ground water or soil into a nearby building. Vapors primarily enter through openings in the buildings foundation, such as cracks in the concrete slab and gaps around utility lines. It is also possible for vapors to pass through concrete, which is naturally porous. Once inside the building, vapors may be inhaled posing potential health risks to building occupants.

**Table 2 (Continued). Summary of Selected on-Site and Nearby Spill Incidents**

Facility Name and Address	Location	Comments
<b>441 Page Mill Road</b> 423, 433, 441, and 451 Page Mill Road	On-Site	<p>Identified as an open case on the SLIC database. These parcels historically were used mainly for residential purposes. Elevated concentrations of pesticides including chlordane and dieldrin, which historically were commonly used to control termites, were identified in soil near the residences. Elevated lead concentrations also were identified that presumably resulted from the historical use of lead-containing paint. VOCs were identified in soil vapor and ground water associated with regional impacts within the COE study area.</p> <p>To facilitate construction of a mixed-use development, a Site Management Plan (SMP) describing planned soil removal activities, and a Vapor Mitigation Plan (VMP) were prepared and approved by the Water Board in 2016.</p>
<b>Stanford Cleaners</b> 2875 El Camino Real	On-Site	<p>Identified as closed case on the SLIC database.</p> <p>A stoddard solvent UST was removed in 1986. Dry cleaning equipment together with fluid and filters was removed in 2010. Soil containing PCE and Stoddard solvent was excavated in 2012 in accordance with a Water Board approved Remedial Action Plan (RAP). Other measures implemented included the installation vapor intrusion mitigation system, - indoor air sampling, and installation of cut-off walls within utility trenches that cross portions of the property.</p> <p>The property also listed on the DEED database and is subject land use restrictions (<i>i.e.</i>, Covenant and Environmental Restriction [Document No. 22476273] recorded with Santa Clara County on December 19, 2013). This covenant restricts certain uses and activities at the property and requires various notifications.</p>
<b>Sabrato</b> 3001-3017 El Camino Real	On-Site	<p>Identified as an open case on the SLIC database. Prior occupants of the property reportedly included a plumbing supply company, a dry cleaner, a furniture store, and a car dealership, an auto wrecking yard and an auto repair facility, among others. A portion of the property also was historically a railroad right-of-way.</p> <p>Palo Alto Nissan at 3001 El Camino Real also is listed as a closed LUST case; two USTs were removed in 1985. Gavenman Property at 3017 El Camino Real also is listed as a closed LUST case; a 500 gallon UST was removed in 1985.</p> <p>Residual concentrations of petroleum hydrocarbons reportedly remain in soil and ground water. Elevated metals concentrations additionally were identified in a few soil samples. VOCs were identified in ground water and soil vapor.</p> <p>Construction of a new mixed-use development on the property is planned. To facilitate redevelopment, a Site Management and Contingency Plan was submitted to the DEH in September 2018. The plan presents various measures to properly manage impacted soil at the property and indicates that a vapor intrusion mitigation system will be installed beneath the buildings.</p>

**Table 2 (Continued). Summary of Selected on-Site and Nearby Spill Incidents**

Facility Name and Address	Location	Comments
<b>Portage LLC</b> 3111, 3127, 3159 El Camino Real and 440 Portage Avenue	On-Site	Identified as an open case on the SLIC database. Prior subsurface investigations identified VOCs in ground water and soil vapor, among other findings. No on-property source of VOCs was identified. Construction of a new mixed-use development on the property is planned. A Site Mitigation Plan was submitted for Water Board and US EPA review in 2014. Agency comments presented in a 2015 email from the Water Board indicate that additional evaluation of potential vapor intrusion concerns was required.
<b>Mercer Processing</b> 230 Portage Avenue	On-Site	Identified as a closed case on the SLIC database. Mercer Processing, Inc. (Mercer) occupied this property from 1989 to 1999 and conducted freeze drying activities. TCE was used in its processing operations. Identified TCE impacted soil was removed under Water Board oversight in 2002. The Water Board issued a no further action letter on April 8, 2002.
<b>Other LUST Cases</b>  Hewlett Packard 395 Page Mill Road  Bleibler Iron Works 411 Page Mill Road  Vance Brown & Sons 3101 Park Boulevard  Park Plaza 195 Page Mill Rd. and 2865 Park Boulevard  Jost Heating & Sheet Metal, 412 Olive Ave.  Carmean Trust 411 Acacia Avenue  Dura Bond Bearing Co. 3201 Ash Street  El Camino Center 340 Portage Avenue	On-Site	Each of the on-Site LUST cases listed to the left is identified as being closed. However, residual contaminant concentrations appear to remain at each of these properties.

### 3.2.1 California Olive Emerson (COE) Study Area and Varian Study Area

Based on the information reviewed, ground water on-Site and in the Site vicinity has been impacted with volatile organic compounds (VOCs). The VOC releases appear to have occurred from multiple sources within an area referred to as the California Olive Emerson (COE) Study Area, and from a second area referred to as the Varian 611 Hansen Way General Study Area (Varian Study Area). The Site is located within portions of the COE Study Area and the associated COE Perimeter Area, and is down-gradient of the Varian Study Area with respect to the reported northeasterly ground water flow direction. Figure 1 shows the Site location with respect to these study areas.

Within the COE Study Area, VOC impacted ground water from Hewlett-Packard Company (HP) facilities at 395 and 640 Page Mill Road and from Varian Medical Systems, Inc. (Varian) at 601 California Street has co-mingled. The San Francisco Bay Regional Water Quality Control Board (Water Board) is the lead agency for COE Area soil and ground water investigation and cleanup (remediation) activities. The Water Board regulates cleanup of the COE Area under *Revised Site Cleanup Requirements, Order No. 94-130*, which was issued on September 21, 1994. Region 9 of the United States Environmental Protection Agency Superfund Division (USEPA) provides technical guidance and support to the Water Board related to the former HP 640 Page Mill Road property, which is a federal Superfund site. The adjoining Varian 611 Hansen Way property and a number of other facilities within the COE Area have, or potentially have, contributed VOCs to the ground water (Stantec, 2015).

The Varian Study Area is bounded by El Camino Real to the northeast, Page Mill Road on the northwest, and Hanover Street on the southwest. The Varian Study Area is located within the Stanford Research Park (SRP), covers approximately 70 acres, and is comprised of 15 buildings in seven complexes. Varian formerly conducted manufacturing operations in many of these buildings. Specifically, six of the seven building complexes were used for manufacturing and chemical storage (Stantec, 2013). The DTSC is overseeing ongoing remediation and monitoring activities at the Varian Study Area.

HP and Varian have performed soil and ground water remediation activities in the COE Area since the 1980s, with hundreds of soil borings, cone penetration test borings, and ground water monitoring wells having been installed. Similar activities have been performed by Varian within the Varian Study Area. These investigations identified VOCs, such as tetrachloroethene (PCE) and trichloroethene (TCE), as the primary chemicals of concern.

Based on recent ground water monitoring data (Stantec, 2018), most on-Site parcels are depicted as being located within the area of VOC impacted ground water, within which TCE and PCE concentrations exceed the drinking water maximum contaminant level (MCL) of 5 micrograms per liter ( $\mu\text{g/L}$ ). TCE and PCE concentration contours are depicted on Figures 3A through 3D.

On June 1, 2011, the Water Board issued a letter to HP and Varian requiring the preparation of a work plan for conducting indoor air testing in buildings within the COE Study Area. Air testing was required in selected residential and commercial buildings where TCE concentrations in ground water exceed 50 and 100  $\mu\text{g/L}$ , respectively. Subsequently, indoor air testing was conducted in 24 buildings, including single-family homes, multi-family residential buildings, and commercial buildings in the Initial Vapor Intrusion Study Area (depicted on Figure 4). For the majority of the buildings, multiple rounds of testing were completed. A total of 82 breathing zone samples from 16 residential buildings and a total of 66 breathing zone samples from eight

commercial buildings were collected and submitted for laboratory analysis (Stantec, 2015). Twenty-one crawlspace samples were collected from residential buildings concurrent with indoor breathing zone samples. Outdoor air samples and potential pathway samples (from areas that are not routinely occupied) were also collected.

None of the breathing zone air samples contained chemicals of concern attributable to vapor intrusion at levels that exceeded corresponding long- or short-term screening levels or response action levels. Based on these findings, Stantec concluded that there is no unacceptable short- or long-term health risk to residential and commercial building occupants in properties in this area from the vapor intrusion pathway. The Water Board concurred with this conclusion in a January 8, 2015 letter, which states, "There is no evidence of vapor intrusion at unacceptable levels in any of the continuously occupied living spaces or work spaces tested to date" (Water Board, 2015).

The USEPA and Water Board subsequently requested an evaluation of indoor air within an expanded assessment area to include commercial and residential properties that have subsurface construction that are located between the Initial Vapor Intrusion Study Area and the estimated 5 µg/L limit of TCE in the first encountered ground water zone. This expanded assessment area is referred to as the "Supplemental Assessment Area" as depicted on Figure 4. Additional outreach to occupants within the Initial Vapor Intrusion Study Area also resulted in permission being granted to conduct sampling within three residential buildings within which samples were not previously collected. During the Additional Vapor Intrusion Assessment, none of the indoor air samples from living spaces and regularly occupied work spaces contained contaminants of potential concern attributable to vapor intrusion at levels that exceeded applicable long- or short-term screening levels or response action levels (Stantec, 2015). In an October 6, 2016 letter, the Water Board approved the Additional Vapor Intrusion Assessment report and indicated that no further action on vapor intrusion in buildings currently present in the designated vapor intrusion evaluation area is required.

## SECTION 4: HISTORICAL USE INFORMATION

The objective of the review of historical use information is to develop a history of the previous uses of the Site and surrounding area in order to help identify the likelihood of past uses having led to Recognized Environmental Conditions at the property. The ASTM standard requires the identification of all obvious uses of the property from the present back to the property's first developed use, or back to 1940, whichever is earlier, using reasonably ascertainable standard historical sources.

### 4.1 HISTORICAL SUMMARY OF SITE AND ADJACENT PROPERTIES

The historical sources reviewed are summarized below. The results of our review of these sources are summarized in Table 3.

- **Historical Aerial Photographs:** We reviewed aerial photographs dated between 1939 and 2012 obtained from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut; copies of aerial photographs reviewed are presented in Appendix C.

**Table 3. Summary of Historical Source Information for the Site Area**

Date	Source	Comment
1939	Aerial photograph	The predominant on-Site development is shown to consist of a former cannery on the Fry's site. The remainder of the Site is shown to be occupied mainly by several widely spaced residences with associated outbuildings and undeveloped land. Railroad tracks are shown to bisect the Site and connect to a main railroad right-of-way that borders the Site to the northeast (as depicted on Figure 2).
1943 and 1948, 1950 and 1958	Aerial photographs	During the 1940s and 1950s, an increase in on-Site residential and commercial development is apparent, along with a corresponding decrease in undeveloped land. The cannery on the Fry's site is shown to have been expanded by the early 1940s, and the on-Site Hewlett-Packard facility at 395 Page Mill Road is shown to have been constructed during the 1950s.
1968 to 2012	Aerial photographs	By the late 1960s, most on-Site parcels are shown to have been developed for residential or commercial use. Since the 1970s, a few remaining on-Site parcels are shown to have been developed, and others are shown to have been re-developed; however, Site development appears generally similar to the current mix of residential and commercial uses.

## SECTION 5: SITE RECONNAISSANCE

We performed a Site reconnaissance to evaluate current general Site conditions and to attempt to identify Site Recognized Environmental Conditions. The results of the reconnaissance are discussed below.

### 5.1 METHODOLOGY AND LIMITING CONDITIONS

To observe current Site conditions (readily observable environmental conditions indicative of a significant release of hazardous materials), Cornerstone staff Stason I. Foster, P.E. visited the Site on November 13, 2018. Our observations were made from readily accessible public right-of-ways.

### 5.2 OBSERVATIONS

At the time of our visit, the Site was observed to be developed with a mix of residential and commercial buildings. In general, the commercial buildings appeared consist of general office and retail space, along with fitness centers, a restaurant and a motel. Several automobile repair businesses also were observed on-Site.

National Fire Protection Association (NFPA) placards were observed to be posted on a few of the on-Site buildings indicating that hazardous materials are used or stored within the buildings. No evidence of on-Site hazardous materials spills was readily apparent from public right-of-ways.

## SECTION 6: CONCLUSIONS (FINDINGS) AND RECOMMENDATIONS

Cornerstone performed this Screening Level Phase I ESA to support David J. Powers & Associates in evaluation of Recognized Environmental Conditions. Our conclusions and recommendations are summarized below.

### 6.1 SITE HISTORY

Based on the information obtained during this study, the Site was developed with a cannery along with several widely spaced residences and associated outbuildings by the 1930s. Over subsequent decades, the density of commercial and residential development on the Site increased. By the late 1960s, most on-Site parcels were developed with commercial structures or residences. A few remaining parcels subsequently were developed and others have since been redeveloped. Railroad tracks formerly bisected the Site and connected to the main railroad right-of-way that borders the Site to the northeast.

### 6.2 REPORTED SPILL INCIDENTS

Ground water on-Site and in the Site vicinity has been impacted with VOCs. The VOC releases appear to have occurred from multiple sources within an area referred to as the COE Study Area, and from a second area referred to as the Varian Study Area. The Site is located within portions of the COE Study Area and the associated COE Perimeter Area, and is down-gradient of the Varian Study Area with respect to the reported northeasterly ground water flow direction.

The predominant sources of VOCs in ground water within the COE Area include former Hewlett Packard facilities at 395 Page Mill Road (on-Site) and 640 Page Mill Road (off-Site) and Varian Medical Systems at 601 California Street (off-Site). The adjoining Varian 611 Hansen Way property (Varian Study Area) and a number of other facilities within the COE Area have, or potentially have, contributed VOCs to the ground water.

As summarized in Table 2, spill incidents have been reported at several on-Site properties that have impacted soil, soil vapor and/or ground water. In general, identified contaminants have included VOCs, petroleum hydrocarbons and/or metals. Some of the on-Site LUST and SLIC cases have been closed by the overseeing regulatory agencies, while at others, characterization and remedial efforts are on-going.

The Water Board is the lead agency for COE Area soil and ground water investigation, and cleanup (remediation) activities. The Water Board regulates cleanup of the COE Area under *Revised Site Cleanup Requirements, Order No. 94-130*, which was issued on September 21, 1994. The USEPA provides technical guidance and support to the Water Board related to the former HP 640 Page Mill Road property, which is a federal Superfund site. Additionally, the Santa Clara County DEH currently is overseeing some of the on-Site cases to facilitate redevelopment activities.

### 6.3 RECOMMENDED PROPERTY-SPECIFIC STUDIES AND PLANS

Prior to redevelopment, a property-specific Phase I ESA should be completed in accordance with ASTM Standard Designation E 1527-13 to identify Recognized Environmental Conditions, evaluate the property history, and establish if the property is likely to have been impacted by chemical releases. Soil, soil vapor and/or ground water quality studies should subsequently be conducted, if warranted based on the findings of the property-specific Phase I ESAs to evaluate if mitigation measures are needed to protect the health and safety of Site occupants.

As a result of the identified VOC releases, elevated VOC concentrations in soil vapor are prevalent within the Site vicinity. Thus, vapor intrusion evaluations should be completed prior to redevelopment. Note that the DTSC, State Water Board, and the San Francisco Bay Water Board are currently developing a supplemental vapor intrusion guidance document for conducting uniform vapor intrusion evaluations in California. This guidance document when finalized (possibly in early 2019) will serve as a supplement to existing guidance (namely, DTSC 2011 Vapor Intrusion Guidance and San Francisco Bay Water Board 2014 Interim Framework). Cornerstone understands that the new guidance will recommend using a more conservative attenuation factor of 0.03 for calculation of soil vapor screening levels<sup>2</sup>, resulting in calculated ESLs that are significantly lower and more health protective than the previously published values. The vapor intrusion evaluations should be conducted in accordance with published guidance documents and using an attenuation factor of 0.03 unless otherwise approved by an overseeing regulatory agency.

**Corrective Action/Risk Management Plan** – An appropriate corrective action/risk management plan (e.g., remedial action plan [RAP], removal action workplan [RAW] or Site Management Plan [SMP], etc.) should be prepared that reflects the results of the on-Site investigations. The corrective action/risk management plan should describe mitigation measures necessary to protect the health and safety of future Site occupants, and establish appropriate management practices for handling and monitoring of impacted soil, soil vapor and ground water that potentially may be encountered during construction activities. The corrective action/risk management plan should be prepared by an Environmental Professional and be submitted to an appropriate overseeing regulatory agency (e.g., USEPA, Water Board and/or DEH) for review. Regulatory agency approval should be obtained prior to commencing construction activities. A Health and Safety Plan (HSP) also should be prepared to establish health and safety protocols for personnel working at the Site. All mitigation measures should be completed under regulatory agency oversight and meet all applicable federal, state and local laws, regulations and requirements.

**Vapor Intrusion Mitigation Plan and Associated Documents** – It is anticipated that vapor intrusion mitigation measures will be required for most new on-Site structures. The need for vapor intrusion mitigation measures will be dependent upon the planned building design and the results of vapor intrusion evaluations described above. If warranted, a Vapor Intrusion Mitigation Plan should be prepared that describes the measures to be implemented to prevent exposure of Site occupants to VOCs in indoor air as a result of vapor intrusion. The Vapor Intrusion Mitigation Plan should require that proposed occupied spaces be designed with appropriate structural and engineering features to reduce risk of vapor intrusion into buildings. At a minimum, this design should include: 1) passive sub-slab ventilation with a spray applied seamless vapor barrier (and with the ability to convert the system from passive to active

---

<sup>2</sup> The 0.03 attenuation factor would be consistent with guidance provided by the US EPA (*OSWER Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air*, June 2015).  
North Ventura Area  
Palo Alto, California  
118-104-1

ventilation), 2) monitoring to ensure the long-term effectiveness of the remedy, and 3) the implementation of institutional controls. Other designs would be acceptable if approved in writing by the overseeing regulatory agency. The Department of Toxic Substances Control (DTSC) October 2011 *Vapor Intrusion Mitigation Advisory* provides useful guidance in selecting, designing, and implementing appropriate response actions for sites where a potential vapor intrusion risk has been identified. As discussed above, note that this advisory document may be updated/amended in early 2019.

A completion report should be submitted to the overseeing regulatory agency upon completion of construction of the mitigation system including final as-built design drawings. A Long-Term Operations, Maintenance, and Monitoring Plan (OMMP) also should be submitted for agency approval that presents the actions to be taken following construction to maintain and monitor the vapor intrusion mitigation system, and a contingency plan should the vapor mitigation system fail. A financial assurance mechanism should additionally be established (*i.e.*, proof that adequate funds are available for long-term maintenance and monitoring of the vapor intrusion mitigation system) and described in the OMMP.

#### 6.4 FORMER RAILROAD TRACKS

Railroad tracks formerly traversed several on-Site parcels. Assorted chemicals historically may have been used for dust suppression and weed control along rail lines. We recommend that soil sampling be conducted along the former railroad track alignments to evaluate soil quality prior redevelopment of parcels on which railroad tracks were located. This evaluation should include sampling of shallow soil (upper 1-foot) and laboratory analyses for contaminants commonly detected along rail lines, such as metals, petroleum hydrocarbons, polycyclic aromatic hydrocarbon (PAHs), polychlorinated biphenyl (PCBs) and pesticides.

#### 6.5 LEAD-BASED PAINT AND TERMITE CONTROL PESTICIDES

The Consumer Product Safety Commission banned the use of lead as an additive in paint in 1978. Based on the age of some on-Site buildings, lead-based paint may be present. The removal of lead-based paint is not required prior to building demolition if the paint is bonded to the building materials. However, if the lead-based paint is flaking, peeling, or blistering, it must be removed prior to demolition. In either case, applicable OSHA regulations must be followed; these include requirements for worker training, air monitoring and dust control, among others. Any debris containing lead must be disposed appropriately.

Additionally, soil adjacent to structures that are painted with lead-containing paint can become impacted with lead as a result of the weathering and/or peeling of painted surfaces. Soil near wood framed structures also can be impacted by pesticides historically used to control termites. Elevated lead and pesticide concentrations were previously detected on-Site near wood-framed residences along Page Mill Road. Residual pesticide and lead concentrations may similarly remain in on-Site soil at other parcels. Prior to redevelopment, we recommend that soil sampling and laboratory analyses be conducted at the locations of prior wood framed structures to evaluate potential impacts to soil quality from the use of termite control pesticides and lead containing paint.

## 6.6 OTHER DEVELOPMENT CONSIDERATIONS

- Some on-Site properties are subject to activity and use limitations (AULs), such as institutional and engineering controls (*a.k.a.*, deed restrictions). Institutional controls (ICs) are legal or regulatory restrictions on a property's use, while engineering controls (ECs) are physical mechanisms that restrict property access or use. Compliance with existing AULs should be maintained.
- During on-Site construction, coordination of work activities with the overseeing regulatory agencies and COE Area Responsible Parties will be required to identify conditions that could affect the on-going monitoring and remedial efforts with the COE Area.
- Ground water monitoring wells and remediation system components are located on some on-Site parcels. These wells and systems must be protected during construction. Upon written approval from the overseeing regulatory agency, the wells could be destroyed under permit from the Santa Clara Water District (SCVWD) prior to development activities. Relocation of the wells may be required.

## 6.7 FACILITY CLOSURES

As part of the facility closure process for occupants that use and/or store hazardous materials, the Palo Alto Fire Department and DEH typically require that a closure plan be submitted by the occupant that describes required closure activities, such as removal of remaining hazardous materials, cleaning of hazardous material handling equipment, decontamination of building surfaces, and waste disposal practices, among others. We recommend that facility closures be coordinated with the Fire Department and DEH to ensure that required closure activities are completed/documented prior to property redevelopment or change in use.

## 6.8 IMPORTED SOIL

If the planned development will require importing soil for property grading, we recommend documenting the source and quality of imported soil. The DTSC's Clean Fill Advisory (October 2001) provides useful guidance on evaluating imported fill.

## 6.9 ASBESTOS AND OTHER HAZARDOUS BUILDING MATERIALS

Due to the age of some on-Site structures, building materials may contain asbestos. If demolition, renovation, or re-roofing of a building is planned, an asbestos survey may be required by local authorities and/or National Emissions Standards for Hazardous Air Pollutants (NESHAP) guidelines. NESHAP guidelines require the removal of potentially friable asbestos containing building materials prior to building demolition or renovation that may disturb these materials.

Some components encountered as part of a building demolition waste stream may contain hazardous materials. Universal wastes, lubrication fluids, refrigerants and other hazardous materials should be removed before structural demolition begins. Materials that may result in possible risk to human health and the environment when improperly managed include lamps, thermostats, and light switches containing mercury; batteries from exit signs, emergency lights, and smoke alarms; lighting ballasts that contain PCBs; and lead pipes and roof vent flashings. Demolition waste such as fluorescent lamps, PCB ballasts, lead acid batteries, mercury

thermostats, and lead flashings have special case-by-case requirements for generation, storage, transportation, and disposal. Before disposing of any demolition waste, the demolition contractor should determine if the waste is hazardous and ensure proper disposal of waste materials.

## 6.10 DATA GAPS

ASTM Standard Designation E 1527-13 requires the environmental professional to comment on significant data gaps that affect our ability to identify Recognized Environmental Conditions. A data gap is a lack of or inability to obtain information required by ASTM Standard Designation E 1527-13 despite good faith efforts by the environmental professional to gather such information. A data gap by itself is not inherently significant; it only becomes significant if it raises reasonable concerns. The following data gaps were identified:

- This Screening Level Phase I ESA is a limited inquiry into the environmental condition of the Site. ASTM E 1527-13, *Standard Practice for Environmental Site Assessments*, was used as a guide for development of the project scope. However, this screening level study was not intended to fulfill all requirements of the ASTM standard. Property-specific Phase I ESAs completed in accordance with ASTM E 1527-13 are recommended prior to construction/redevelopment activities.

## SECTION 7: LIMITATIONS

Cornerstone performed this Screening Level Phase I ESA to support David J. Powers & Associates in evaluation of Recognized Environmental Conditions associated with the Site. David J. Powers & Associates understands that no Screening Level Phase I ESA can wholly eliminate uncertainty regarding the potential for Recognized Environmental Conditions to be present at the Site. This Screening Level Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions. David J. Powers & Associates understands that the extent of information obtained is based on the reasonable limits of time and budgetary constraints.

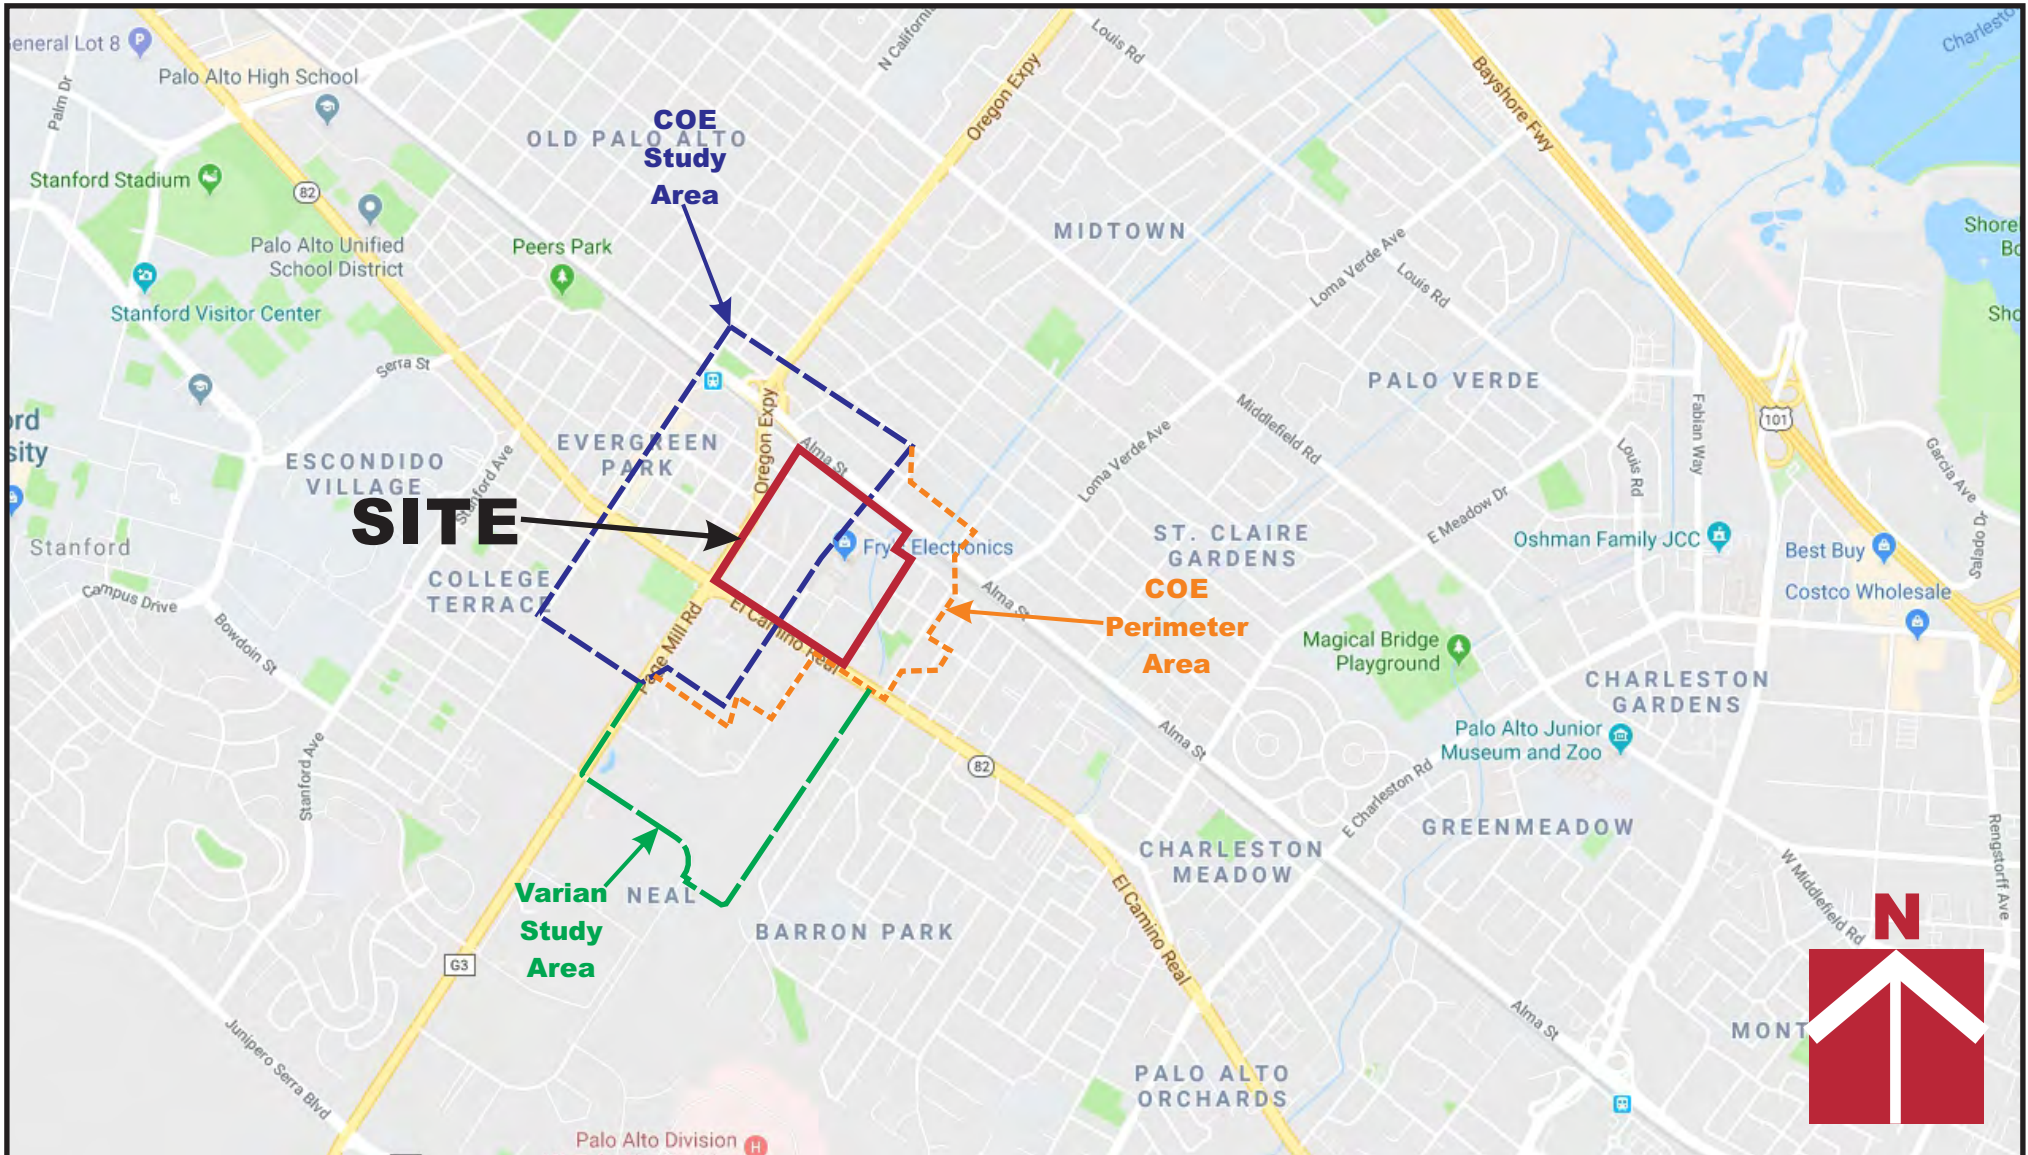

Conclusions presented in this report are based on selected, readily available information and conditions readily observed at the time of the Site visit. Screening Level Phase I ESAs are inherently limited because findings are developed based on information obtained from a non-intrusive Site evaluation. Cornerstone does not accept liability for deficiencies, errors, or misstatements that have resulted from inaccuracies in the publicly available information. In addition, publicly available information and field observations often cannot affirm the presence of Recognized Environmental Conditions; there is a possibility that such conditions exist. If a greater degree of confidence is desired, soil, ground water and/or soil vapor samples should be collected by Cornerstone and analyzed by a state-certified laboratory to establish a more reliable assessment of environmental conditions.

Cornerstone acquired an environmental database report of selected publicly available information for the general area of the Site. Cornerstone cannot verify the accuracy or completeness of the database report, nor is Cornerstone obligated to identify mistakes or insufficiencies in the information provided (ASTM E 1527-13, Section 8.1.3). Due to inadequate address information, the environmental database may have mapped several facilities inaccurately or could not map the facilities. Releases from these facilities, if nearby, could impact the Site.

This report, an instrument of professional service, was prepared for the sole use of David J. Powers & Associates and may not be reproduced or distributed without written authorization from Cornerstone. It is valid for 180 days. An electronic transmission of this report may also have been issued. While Cornerstone has taken precautions to produce a complete and secure electronic transmission, please check the electronic transmission against the hard copy version for conformity.

Cornerstone makes no warranty, expressed or implied, except that our services have been performed in accordance with the environmental principles generally accepted at this time and location.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

RGA LF..... Recovered Government Archive Solid Waste Facilities List

# EXECUTIVE SUMMARY

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 08/13/2018 has revealed that there is 1 NPL site within approximately 0.001 miles of the target property.

### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/17/2018 has revealed that there is 1 SEMS site within approximately 0.001 miles of the target property.

## EXECUTIVE SUMMARY

### ***Federal institutional controls / engineering controls registries***

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 07/31/2018 has revealed that there is 1 US ENG CONTROLS site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>HEWLETT-PACKARD (620)</b> EPA ID:: CAD980884209 EPA ID:: CAD980884209	<b>620 - 640 PAGE MILL</b>	<b>0 - 1/8 (0.000 mi.)</b>	<b>0</b>	<b>373</b>

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 07/31/2018 has revealed that there is 1 US INST CONTROL site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>HEWLETT-PACKARD (620)</b> EPA ID:: CAD980884209	<b>620 - 640 PAGE MILL</b>	<b>0 - 1/8 (0.000 mi.)</b>	<b>0</b>	<b>373</b>

### ***State and tribal leaking storage tank lists***

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there is 1 CPS-SLIC site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>HEWLETT-PACKARD (620)</b> Database: CPS-SLIC, Date of Government Version: 09/10/2018 Facility Status: Open - Remediation Global Id: SL720511210	<b>620 - 640 PAGE MILL</b>	<b>0 - 1/8 (0.000 mi.)</b>	<b>0</b>	<b>373</b>

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### ***Other Ascertainable Records***

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 07/17/2018 has revealed that there is 1 ROD

## EXECUTIVE SUMMARY

site within approximately 0.001 miles of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 07/23/2018 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**Facility Status: Open - Eligible for Closure**  
Status Date: 07/18/2018  
Global Id: SL0608525943  
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
Lead Agency Case Number: Not reported  
Latitude: 37.4264282592534  
Longitude: -122.138335704803  
Case Type: Cleanup Program Site  
Case Worker: RWP  
Local Agency: Not reported  
RB Case Number: 43S1107  
File Location: Regional Board  
Potential Media Affected: Soil, Soil Vapor  
Potential Contaminants of Concern: \* Chlorinated Hydrocarbons, Arsenic, Waste Oil / Motor / Hydraulic / Lubricating  
  
Site History: Limited soil investigations indicates limited chlorinated volatile organic compounds (CVOCs) and petroleum hydrocarbon (PHC) contamination probably originating from prior industrial site use. Groundwater contamination probably originated from off-site HP/Varian sources within the COE plume. However, elevated soil gas chlorinated volatile organic compounds (CVOCs) in soil gas under the northeastern half of the property indicate potential vadose zone CVOc sources in that area. During excavation for building footings, PHC contamination associated with several underground storage tanks (USTs) was discovered in the central portion of the property. A followup investigation defined and excavated the soil-PHCs and groundwater-PHCs were defined to within property boundaries. The proposed remedy is excavation and disposal. The building has been constructed with potential IA VI mitigated through the vapor intrusion mitigation system (VIMS) consisting of a vapor barrier plus a subslab ventilation system. Indoor air testing will be conducted to verify that the VIMS is operating as designed.

Lead Agency Case Number: Not reported  
Latitude: 37.42374  
Longitude: -122.14093  
Case Type: Cleanup Program Site  
Case Worker: MBR  
Local Agency: Not reported  
RB Case Number: 43S1198  
File Location: All Files are on GeoTracker or in the Local Agency Database  
Potential Media Affected: Contaminated Surface / Structure, Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor  
Potential Contaminants of Concern: Trichloroethylene (TCE)  
Site History: Based on information presented in the May 17, 2012, Phase 1 Environmental Site Assessment, Green Mountain Reality is planning to redevelop the Site with a mixed-use (retail, commercial, and residential) structure. The proposed structure will be three stories above ground with one level below ground for parking. The Site is located within the California Olive Emerson (COE) Study Area, with is characterized with contaminated groundwater of various volatile organic compounds (VOCs) from several upgradient sites including former Hewlett Packard 640 Page Mill Road, former Varian 601 California Avenue, and former Hewlett Packard, 395 Page Mill Road. Analysis of groundwater in the Site vicinity show trichloroethene (TCE) concentrations ranging, generally, from 50 to 130 micrograms per liter (ug/L).

**Completed Info:**

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Correspondence  
Completed Date: 06/14/1993  
Comments: The agenda from a meeting that Hewlett-Packard held with DTSC. The purpose of the meeting was to update DTSC on HP's recent activities regarding their Interim Status Document (ISD) permit and to obtain DTSC's concurrence of their approach to obtain final ISD termination. The agenda reviewed: the permitting history of the facility at 395 Page Mill Road between 1981 and 1993; the status of the ISD regulated units as of June 2, 1993; and HP's plan for going forward.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Correspondence  
Completed Date: 06/10/1994  
Comments: A correspondence from DTSC to Hewlett-Packard stating that DTSC had reviewed the closure plan dated March 28, 1994 and the certification of closure for HP's 395 Page Mill Road facility. DTSC determined that the closure plan and certification were acceptable, and that the Interim Status Document for the facility was no longer in effect as of June 10, 1994. A copy of the March 28, 1994 revised closure plan referenced in the closure certification letter could not be found in DTSC's files when the site screening was performed.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Phase 1 Addendum  
Completed Date: 08/14/2017  
Comments: DTSC performed a site screening to assess whether investigation or corrective action were needed to address releases of hazardous substances/wastes at the Site. Contamination at the Site has been a result of manufacturing electronic equipment at the Site. Chemicals of concern are mostly volatile organic compounds (VOCs) such as trichloroethene (TCE), tetrachloroethene (PCE), trichloroethane (TCA), and dichloroethene (DCE). The Regional Water Quality Control Board (RWQCB) has been the lead oversight agency since 1989. DTSC issued a closure certification for the hazardous waste management units at the site on June 10, 1994. The Site is subject to Site Cleanup Requirements as outlined in Order No. 94-130 issued by RWQCB on September 21, 1994. There is a Covenant and Environmental Restriction of Property recorded for the Site between RWQCB and Agilent Technologies restricting the usage of the Site to non-sensitive usage, and ensuring that none of the remediation or monitoring systems are disturbed. Soil remediation began in 1986, consisting of soil vapor extraction and excavation of contaminated soils. RWQCB acknowledged that the final soil cleanup standards had been met on January 30, 2008. RWQCB acknowledged that there was no threat of vapor intrusion for building occupants, and that there was no threat to short- or long-term human health in the surrounding study area. Groundwater remediation is ongoing at the Site, with performance monitoring for the effectiveness of ongoing enhanced in situ bioremediation.

Lead Agency Case Number: Not reported  
Latitude: 37.4249287000276  
Longitude: -122.139000892639  
Case Type: Cleanup Program Site  
Case Worker: RWP  
Local Agency: SANTA CLARA VALLEY WATER DISTRICT  
RB Case Number: 43S0053  
File Location: Regional Board  
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil  
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)  
Site History: This site is part of the COE Study Area - bounded by California, Olive, and Emerson Streets - that includes HP 640 PMR (MSCA site) and Varian 601 California. As part of the dual phase extraction (DPE) system GWET was shut down after reaching asymptotic groundwater-CVOC levels in 2001. Subsequent In-Situ Chemical Oxidation (ISCO) began late 2007 when groundwater CVOC levels in well RW-5 were still peaking at over 800 parts per billion (ppb). ISCO baseline groundwater sampling indicated that well OB11-2 - that had not been sampled since 1997 - contained PCE at 120,000 ppb. Subsequent ISCO injections reduced PCE levels below 50 ppb that rebounded to over 1,000 ppb by the next ISCO monitoring event. When elevated groundwater-PCE levels were noted in OB11-2, the Water Board required a workplan to evaluate potential vapor intrusion assessment that was reviewed and approved in January 2008. The COE site-wide IA VI has been completed and there were no exceedances of the indoor air ESL in the breathing zone.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

NON-CASE INFO:

<p>Global ID:          Case Type:          Status:          Status Date:          Lead Agency:          Case Worker:          Local Agency:          RB Case Number:          Loc Case Number:          File Location:          Potential Contaminants of Concern:          Potential Media Affected:          Site History:</p>	<p>T10000009221          Non-Case Information          Informational Item          08/08/2016          SANTA CLARA COUNTY LOP          AC          SANTA CLARA COUNTY LOP          Not reported          Not reported          All Files are on GeoTracker or in the Local Agency Database          Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride          Aquifer used for drinking water supply, Soil Vapor          This property is within the COE study area. A facility closure was          permitted by the City of Palo Alto Fire Department. Based on the data          received by the DEH, groundwater and soil vapor sampling was          recommended. The groundwater and soil vapor data indicate that          groundwater beneath the site is contaminated by VOCs. The VOCs in          groundwater are likely off-gassing and creating a soil vapor plume          beneath the site as well. It does not appear that the former Auto          Body operation had a significant release. The contamination found          beneath the property appears to have migrated from an upgradient          source within the COE study area. The Regional Water Quality Control          Board should be consulted prior to any redevelopment or change in          land use.</p>

**CA BOND EXP. PLAN:**

Responsible Party: TIER 3 (MINIMUM HAZARD THRESHOLD SITE) REPORT  
Project Revenue Source Company: Not reported  
Project Revenue Source Addr: Not reported  
Project Revenue Source City,St,Zip: Not reported  
Project Revenue Source Desc: Not reported  
Site Description: A ditch adjacent to an auto body shop located at the above address was identified by the Department as being contaminated with an oily black material containing lead. It is suspected that this material accumulated in the ditch from runoff at the auto body shop location. Subsequent to discovery, the area containing the ditch was graded and paved with asphalt. An auto dealership is now located on the site of the former ditch.  
Hazardous Waste Desc: Analysis of the oily material indicated the presence of petroleum products and moderate concentrations of lead.  
Threat To Public Health & Env: Not reported  
Site Activity Status: As a Tier 3 site, this site will be listed annually in this report. If the asphalt cap is removed and the property is proposed for development for other usage, DHS may order that some additional abatement be conducted.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 08-04-2014  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Facility does general auto body repair, prime, paint and detail finish work. Using only water-based base coat paints provided by EnvisoBase. Still use urethane based clear coat/top coats. -have one 15 gallon drum for disposal of excess paint from paint cups -Paint guns and tips are cleaned at safety kleen provided and serviced wast station that recycles the solvent after filtration. System is cleaned approximately every quarter. Paint filters, overspray mask paper and empty paint cups are managed as non-hazardous solids. -Paint filters also managed as non-hazardous. Testing done in 2000, generator has not retested. -Empty paint containers are less than 5 gallons, are drained to waste paint drum, and disposed of in trash. Empty containers in dumpster noted were dry, slight residuals stuck to walls but no residual pourable/scrapeable. Now using aerosol cans for application of small area applications of bumper prep materials. Mr. Jara was aware of proper management of [Truncated]

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 11-24-2014  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes:

Facility is secondary site for shop located at 3045 Park Ave. Frame and body shop with paint booth. Paints are mixed, applied and stored for up to a week. Generally at end of week, cups opened and poured to either waste thinner or waste aqueous paint drums. Dry cups noted in trash and dumpster. Rags serviced by G&K. Most touch wiping is done using disposable fiber wipes. 30 gallon drum of glycol G020C: drum of glycol marked with start date during inspection. Emergency info posted on wall. Spill kits and extinguishers available. As a very small quantity generator (less than 27 gallons of waste/month) you may keep your waste indefinitely until you have a total of 27 gallons of waste onsite. Once you reach that 27 gallon level, you need to have the waste removed within 180 days. RECOMMEND SCHEDULING ROUTINE PICK UP OF ALL WASTES EVERY SIX MONTHS. IF LARGER CONTAINERS (E.G. OIL) ARE NOT FULL, LOOK INTO USING SMALLER CONTAINERS.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: De-Certification  
Completed Date: 11/15/1993  
Comments: In September 1992; closure of surface impoundments and 100 cubic yards of contaminated soil were removed. In December 1983; company closed a water treatment system which the Department of Toxic Substances Control approved and 28 cubic yards of soil were removed and disposed of during the closure of the water treatment system. Dura Bond has been working with RWQCB concerning fuel spills and some groundwater contamination problems from an off-site source since 1984. Therefore, the site has been "decertified" and the previous cert is considered a removal action. The status of the site shows as referred to the RWQCB.

Site ID: 151336  
Site Name: SAY RAY FOREIGN AUTO SERVICE  
Violation Date: 04-15-2014  
Citation: HSC 6.5 25189.5(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a)

Violation Description: Failure to properly dispose of hazardous waste at an authorized location.

Violation Notes: Facility is not currently separating cased and non-cased oil filters. Per State of California, oil filters must be metal cased to qualify as "used oil filters" for recycling. Please begin separating these filters or place all filters in one drum but label the drum as "hazardous waste" with the contents "oily debris/filters".

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 04-15-2014  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Routine inspection of automotive repair facility. Site generates used oil, antifreeze, mop water, batteries, parts was solution, oil filters. Oil and antifreeze to tanks, each marked and with series of pick up dates. -tanks visually inspected daily upon opening shop (proximity to door) Mop water to antifreeze container. Noted two mop buckets, each with dirty water, no oily sheen on either. Have two parts wash units, each serviced quarterly by Safety Kleen. Both units aqueous solutions. 55 gallon drum for filters. Currently consolidating cased and uncased filters. Rags serviced by Aramark. Batteries serviced by Interstate. Emergency information posted in shop, phone available in shop. Fire extinguishers in shop, serviced 6/2013. All aerosol cans and quart bottles of fluids noted in garbage or metal recycle bin were empty. Keep up the great work here! Rolling oil collection vessels marked with tags zip tied to collar. All labels

Violations:

Site ID: 141679  
Site Name: PARK AVENUE MOTORS  
Violation Date: 11-20-2017  
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.  
Violation Notes: 1) Observed the following un-labeled containers accumulating hazardous waste: - one 55 gallon paper used oil filter drum - one 55 gallon metal-encased used oil filter drum (managed as hazardous waste by facility) - two 16 gallon used oil rollers - three 3 gallon evacuators accumulating used oil - one 16 gallon used brake fluid roller 2) Observed one 55 gallon drum of paper used oil filters and one 55 gallon drum of metal used oil filters missing initial accumulate dates. The drums' contents are also incorrectly identified as "solid" for the physical property, because significant quantities of free-flowing used oil was observed at the bottom of both drums. 3) Observed the following container of hazardous waste labeled only with the content composition: one 5 gallon container of metal and paper used oil filters  
Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 141679  
Site Name: PARK AVENUE MOTORS  
Violation Date: 11-20-2017  
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2  
Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.  
Violation Notes: All consolidated manifests incorrectly identify the facility's CA EPA ID Number as CAL000421179, rather than the correct CA EPA ID Number: CAL000421792.  
Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 141679  
Site Name: PARK AVENUE MOTORS  
Violation Date: 11-20-2017  
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31  
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.  
Violation Notes: Coarse brake turnings were observed on the ground surrounding the brake lathe and no accumulation container for the turnings was observed. Ensure that coarse brake turnings are collected and recycled

Violation Division: for scrap metal content or collected and managed as hazardous waste.  
Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 141679  
Site Name: PARK AVENUE MOTORS  
Violation Date: 11-20-2017  
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections  
Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General  
Violation Notes: 1) Facility employees stated that all used brake fluid is collected in the red 16 gallon used brake fluid roller and the roller is transferred to Audi Palo Alto (1730 Embarcadero Way, Palo Alto) for consolidation with the main business location's used brake fluid when the roller becomes full. 2) No Uniform Hazardous Waste Manifests or consolidated manifests exist for the facility's paper used oil filters waste stream and waste petroleum distillates waste stream. Additionally, only one consolidated manifest is associated with the facility's metal-encased used oil filters that are managed as hazardous waste. All facility employees stated that the hazardous wastes are consolidated with the main business location's hazardous waste (1730 Embarcadero) on manifests when being sent for disposal.

Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 141679  
Site Name: PARK AVENUE MOTORS  
Violation Date: 11-20-2017  
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7  
Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2) By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.  
Violation Notes: Observed two 1 quart containers of OW-20 with free-flowing quantities of oil in the trash can on the shop floor. Note that free-flowing quantities of oil was also observed at the bottom of the trash can and suspected to have leaked from other open motor oil containers. Observed one 1 gallon container of antifreeze containing free-flowing quantities of antifreeze in the trash can near the tire area.

Violation Date: 11-20-2017  
Citation: 40 CFR 1 265.201(c)(5) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.201(c)(5)

Violation Description: Failure to inspect hazardous waste tanks for the following, when present: 4) The construction materials of the tank at least weekly to detect corrosion or leaking of fixtures or seams. 5) The construction materials of, and the area immediately surrounding, discharge confinement structures (e.g., dikes) at least weekly to detect erosion or obvious signs of leakage (e.g., wet spots or dead vegetation).

Violation Notes: The used oil tank's mechanical leak gauge's float was observed to be 3/4 popped, indicating that a leak has been detected. Employees were unaware of how to inspect the leak gauge and what the popped leak gauge float meant. Additionally, a tank inspection log was posted near the tanks, but have not been filled out to demonstrate that inspections are being conducted. NOTE: Ensure that you are inspecting any discharge control systems, data gathered from monitoring equipment, and for uncovered tanks, the level of the waste in the tank at least daily. [CFR 265.201(c)]

Citation: 22 CCR 23 66273.31(a) - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.31(a)

Violation Description: Failure of the universal waste handler to transfer universal waste to the appropriate destination facility.

Violation Notes: Observed one 1/4 full ignitable parts wash aerosol can (containing acetone, toluene, and methyl alcohol) in the trash can. Aerosols cans must be fully emptied of both contents and propellant through normal use if they are disposed of as trash. Non-empty, waste aerosol cans must be collected and managed as universal waste or hazardous waste.

Violation Date: 11-20-2017  
Citation: HSC 6.5 25163(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25163(a)

Violation Description: Failure to use a DTSC registered hazardous waste transporter to transport hazardous waste or transporting hazardous waste without being a DTSC registered hazardous waste transporter.

Violation Notes: Upon inquiry as to how used brake fluid is managed, facility employees stated that all used brake fluid is collected in the red 16 gallon used brake fluid roller and the roller is transported to Audi Palo Alto (1730 Embarcadero Way, Palo Alto) for consolidation with the main business location's used brake fluid when the roller becomes full.

Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Observed one 55 gallon drum containing paper used oil filters and used oil and one 55 gallon drum of containing metal used oil filters (managed as hazardous waste) and used oil completely open (no lid) when wastes are not being added or removed. Observed one used brake fluid roller and one used coolant roller without a means to tightly close the containers when not added or removing waste. Note that the rollers accumulate hazardous wastes for longer than one day.

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection. The facility is the branch location of the Audi Palo Alto dealership. New and used cars are taken to this location for service and hazardous wastes are generated from routine automotive maintenance activities. Hazardous wastes observed during inspection include used oil, used coolant, paper used oil filters, metal-encased used oil filters, used gasoline filters, used brake fluid, used rags, and used aerosol cans. Observed the following hazardous waste containers and tanks during inspection:  
- One 250 gallon used oil tank with integral secondary containment -  
One 150 gallon used coolant tank with integral secondary containment:  
Empty at the time of inspection - two 16 gallon used oil rollers;  
three 3 gallon evacuators accumulating used oil - one 16 gallon used coolant roller: Per facility staff, used coolant is stored in the used coolant roller until it becomes full, then it is transferred into the used coolant one 16 [Truncated]

Violation Date: 11-20-2017  
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.  
Violation Notes: 1) Observed the following un-labeled containers accumulating hazardous waste: - one 55 gallon paper used oil filter drum - one 55 gallon metal-encased used oil filter drum (managed as hazardous waste by facility) - two 16 gallon used oil rollers - three 3 gallon evacuators accumulating used oil - one 16 gallon used brake fluid roller 2) Observed one 55 gallon drum of paper used oil filters and one 55 gallon drum of metal used oil filters missing initial accumulate dates. The drums' contents are also incorrectly identified as "solid" for the physical property, because significant quantities of free-flowing used oil was observed at the bottom of both drums. 3) Observed the following container of hazardous waste labeled only with the content composition: one 5 gallon container of metal and paper used oil filters

Violation Description: 11, Section(s) 66261.7  
Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Observed two 1 quart containers of OW-20 with free-flowing quantities of oil in the trash can on the shop floor. Note that free-flowing quantities of oil was also observed at the bottom of the trash can and suspected to have leaked from other open motor oil containers. Observed one 1 gallon container of antifreeze containing free-flowing quantities of antifreeze in the trash can near the tire area.

**FINDS:**

Registry ID: 110002918585

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes: Stanford Arco Auto is a single bay auto shop that does auto service but no bodywork or painting. Facility generates the following wastes: used oil, used antifreeze, oily rags (disposed of as hazardous waste and given to hauler, according to Mr. Kim), used oil and gasoline filters, spent batteries (core exchange), oily absorbent (none observed), brake fluid (currently taken to shell for disposal, according to Mr. Kim), non-empty aerosol cans (none observed), brake shavings (taken as scrap metal), and spent fluorescent tubes (taken to Orchard Supply), Facility does not generate the following wastes: parts washing solution, spent gasoline, or oily water. Mr. Kim is the sole worker in the shop and has been trained to manage hazardous waste through industry experience. He stated that he inspects all waste containers at least weekly. The following areas were inspected: Communal dumpster, shop trash cans, waste storage area inside shop, service bay. The following documents [Truncated]

Eval Notes: Stanford Arco Auto is a single bay auto shop that does auto service but no bodywork or painting. Facility generates the following wastes: used oil, used antifreeze, oily rags (disposed of as hazardous waste and given to hauler, according to Mr. Kim), used oil and gasoline filters, spent batteries (core exchange), oily absorbent (none observed), brake fluid (currently taken to shell for disposal, according to Mr. Kim), non-empty aerosol cans (none observed), brake shavings (taken as scrap metal), and spent fluorescent tubes (taken to Orchard Supply). Facility does not generate the following wastes: parts washing solution, spent gasoline, or oily water. Mr. Kim is the sole worker in the shop and has been trained to manage hazardous waste through industry experience. He stated that he inspects all waste containers at least weekly. The following areas were inspected: Communal dumpster, shop trash cans, waste storage area inside shop, service bay. The following documents [Truncated]

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Case Number: 06S3W12J02f  
Potential Media Affect: Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Trichloroethylene (TCE), Diesel, Gasoline  
Site History: The site is located within the California-Olive-Emerson (COE) regional plume of VOC affected groundwater. Chlorinated VOCs (CVOCs) associated with this regional plume, (including trichloroethene [(TCE)], have been found in soil and/or groundwater samples at low concentrations at the site at concentrations generally less than 5 a%g/L. Numerous shallow groundwater monitoring wells associated with monitoring and evaluation of the COE plume are located at on- and off-site locations in the vicinity of the former UST area. Typical groundwater depths (ranging between 13 to 17 feet bgs) and flow directions in the vicinity is understood (both within the greater COE study area as well as at the site), and based on groundwater elevation contour maps prepared by others groundwater flow direction at the subject site is north to northeast, towards San Francisco Bay (located approximately 2 miles northeast of the site). The former UST area is located in the southern portion of the main parking lot of the El Camino Center, a commercial retail shopping center. Prior to removal of the two diesel tanks (including one 1,000-gallon UST and one 1,150-gallon tank), groundwater samples were collected in 2010 in the vicinity of the former USTs. The groundwater sample results indicated low-to-moderate concentrations of total petroleum hydrocarbons quantified as gasoline (TPHg) and diesel (TPHd), and a general absence of benzene, toluene, ethylbenzene, and xylenes (BTEX) in groundwater in the near vicinity of the tanks. TPHg and TPHd were detected in grab groundwater samples at maximum concentrations of 2.1 and 24.3 milligrams per liter (mg/L), respectively; in contrast, relatively low maximum concentrations of benzene and ethylbenzene were detected at 9.4 and 11.4 micrograms per liter (a%g/L); respectively. All other petroleum hydrocarbon-related constituents were detected below San Francisco Bay Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs). The two former USTs were removed under permit with oversight by the DEH on October 18, 2011. During the tank excavation activities, approximately 750 cubic yards of hydrocarbon affected soil were removed and disposed off-site. Prior to backfilling, approximately 500 pounds of oxygen-releasing compound (ORC) was distributed across the bottom of the excavation to assist in the degradation of residual hydrocarbons in the subsurface. Surface conditions at the site consisted of an

MAP FINDINGS

**EL CAMINO CENTER (Continued)**

**S111711442**

asphalt-cement parking lot, with little base rock material beneath. During previous investigations, subsurface soils encountered beneath the parking lot were predominantly clays to the maximum depth explored (28 feet bgs). A sand lense, ranging from 1 to 7 feet thick, is present at approximately 15 feet bgs. Saturated soil was encountered in each boring at varying depths ranging from approximately 15 feet to 25 feet bgs. Static depth to water was measured in most borings at approximately 16 feet bgs. Numerous shallow groundwater monitoring wells associated with monitoring and evaluation of the COE plume are located at on- and off-site locations in the vicinity of the former UST area. Based on current and historical groundwater elevation measurements and contour maps, groundwater flow direction at the subject site is north-to-northeast. Based on the most recent groundwater data, the extent of residual petroleum hydrocarbons in groundwater appears to be generally controlled by lateral groundwater flow in the downgradient north-to-northeast groundwater flow direction. Dissolved residual petroleum hydrocarbons are being depleted via natural attenuation, advection, and diffusion. The highest concentrations of petroleum hydrocarbon residuals in groundwater appear to be in the near vicinity of the former tanks, represented by groundwater samples GW-4 and GW-8, and the downgradient extent of the residual hydrocarbon plume (less than 150 feet in length) is delineated by samples GW-1 and GW-2. The maximum concentrations of TPHd are less than the maximum groundwater concentrations detected during the 2010 investigation (24.3 mg/L); collected during the source removal actions (tank removal and overexcavations) in 2011.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal June 24, 1988): Hewlett-Packard manufactured optoelectronic equipment on a 10-acre site at 620-640 Page Mill Road in Palo Alto, Santa Clara County, California, until 1986. In July 1981, at least 300 gallons of waste solvents, including 1,1,1-trichloroethane, trichloroethylene, toluene, xylene, and alcohols, leaked from a buried storage tank for a period of at least 3 weeks. The company excavated the tank and approximately 100 cubic yards of contaminated soil and transported the materials to a hazardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act. Since 1982, the company has been pumping and treating contaminated ground water. Tests conducted in 1986 by a consultant to Hewlett-Packard detected trans-1,2-dichloroethylene, 1,1-dichloroethylene, trichloroethylene, 1,1,1-trichloroethane, and xylene, several in high concentrations (290,000 parts per billion) in ground water under the tank area. An estimated 57,000 people obtain drinking water from municipal wells within 3 miles of the site. In 1987, Hewlett-Packard excavated an additional 810 cubic yards of soil around the former tank area. Status February 21, 1990): Hewlett-Packard is conducting a remedial investigation/feasibility study (RI/FS) to determine the type and extent of off-site contamination and identify alternatives for remedial action. A report on the RI/FS is due in February 1990.

**CPS-SLIC:**

Region: STATE  
**Facility Status:** **Open - Remediation**  
Status Date: 01/01/1987  
Global Id: SL720511210  
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
Lead Agency Case Number: Not reported  
Latitude: 37.4211115046554  
Longitude: -122.144923210144  
Case Type: Cleanup Program Site  
Case Worker: RWP  
Local Agency: SANTA CLARA VALLEY WATER DISTRICT  
RB Case Number: 43S0051  
File Location: Regional Board  
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Vapor  
Potential Contaminants of Concern: Trichloroethylene (TCE), 1,1,1-Trichloroethane (TCA), Arsenic, Tetrachloroethylene (PCE)  
Site History: The responsible parties conducted the following remedial measures: - Soil excavation of the on-site dry well source in 1990s - On-site soil vapor extraction for a few years - On- and off-site groundwater extraction that continues today - On-site In-situ chemical oxidation (ISCO) Groundwater migration is under lateral control in the A1 and A2 Zones with increased off-property extraction in EW-8 and EW-10. However, CVOC levels in the A2 Zone rose from non-detectable levels

in 2000 to elevated levels since 2001. The installation and monitoring of a B-Zone well downgradient from the area of elevated A2-Zone CVOCs indicates the B Zone has not been significantly impacted. Following up on the last 5YR, the Responsible Parties are pilot testing on-property direct remediation of the A1 and A2 Zones through focused groundwater extraction that has successfully lowered CVOC levels from over DNAPL threshold to the high-hundreds to low thousands of parts per billion. On-property indoor air vapor intrusion is effectively controlled by the podium-parking design of the building that has a vapor barrier. Off-property VI evaluation is currently being conducted with the residential phase recently completed. The off-property VI evaluation concluded that VI is not occurring in single family homes and in the breathing zone of residential and commercial buildings with Regional Water Board and USEPA concurrence.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 08/13/2018	Source: EPA
Date Data Arrived at EDR: 10/04/2018	Telephone: N/A
Date Made Active in Reports: 11/09/2018	Last EDR Contact: 10/04/2018
Number of Days to Update: 36	Next Scheduled EDR Contact: 01/14/2019
	Data Release Frequency: Quarterly

EPA Region 10  
Telephone 206-553-8665

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/13/2018	Source: EPA
Date Data Arrived at EDR: 10/04/2018	Telephone: N/A
Date Made Active in Reports: 11/09/2018	Last EDR Contact: 10/04/2018
Number of Days to Update: 36	Next Scheduled EDR Contact: 01/14/2019
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/13/2018

## ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016  
Date Data Arrived at EDR: 01/05/2017  
Date Made Active in Reports: 04/07/2017  
Number of Days to Update: 92

Source: Environmental Protection Agency  
Telephone: 703-603-8704  
Last EDR Contact: 07/06/2018  
Next Scheduled EDR Contact: 10/15/2018  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/17/2018  
Date Data Arrived at EDR: 08/09/2018  
Date Made Active in Reports: 09/07/2018  
Number of Days to Update: 29

Telephone: 800-424-9346  
Last EDR Contact: 10/04/2018  
Next Scheduled EDR Contact: 01/28/2019  
Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/17/2018	Source: EPA
Date Data Arrived at EDR: 08/09/2018	Telephone: 800-424-9346
Date Made Active in Reports: 09/07/2018	Last EDR Contact: 10/04/2018
Number of Days to Update: 29	Next Scheduled EDR Contact: 01/28/2019
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/01/2018	Source: EPA
Date Data Arrived at EDR: 03/28/2018	Telephone: 800-424-9346
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/14/2018	Source: Department of the Navy
Date Data Arrived at EDR: 05/18/2018	Telephone: 843-820-7326
Date Made Active in Reports: 07/20/2018	Last EDR Contact: 10/15/2018
Number of Days to Update: 63	Next Scheduled EDR Contact: 02/25/2019
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/28/2018	Telephone: 703-603-0695
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 08/28/2018
Number of Days to Update: 17	Next Scheduled EDR Contact: 12/10/2018
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/28/2018	Telephone: 703-603-0695
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 08/28/2018
Number of Days to Update: 17	Next Scheduled EDR Contact: 12/10/2018
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/24/2018  
Date Data Arrived at EDR: 09/25/2018  
Date Made Active in Reports: 11/09/2018  
Number of Days to Update: 45

Source: National Response Center, United States Coast Guard  
Telephone: 202-267-2180  
Last EDR Contact: 09/25/2018  
Next Scheduled EDR Contact: 01/07/2019  
Data Release Frequency: Quarterly

## ***State- and tribal - equivalent NPL***

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 07/30/2018  
Date Data Arrived at EDR: 07/31/2018  
Date Made Active in Reports: 09/07/2018  
Number of Days to Update: 38

Source: Department of Toxic Substances Control  
Telephone: 916-323-3400  
Last EDR Contact: 10/30/2018  
Next Scheduled EDR Contact: 02/11/2019  
Data Release Frequency: Quarterly

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 07/30/2018  
Date Data Arrived at EDR: 07/31/2018  
Date Made Active in Reports: 09/07/2018  
Number of Days to Update: 38

Telephone: 916-323-3400  
Last EDR Contact: 10/30/2018  
Next Scheduled EDR Contact: 02/11/2019  
Data Release Frequency: Quarterly

## ***State and tribal landfill and/or solid waste disposal site lists***

SWF/LF (SWIS): Solid Waste Information System

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 08/08/2018  
Date Data Arrived at EDR: 08/10/2018  
Date Made Active in Reports: 08/24/2018

## INDIAN UST R8: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 8 (Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming and 27 Tribal Nations).

Date of Government Version: 04/25/2018	Source: EPA Region 8
Date Data Arrived at EDR: 05/18/2018	Telephone: 303-312-6137
Date Made Active in Reports: 07/20/2018	Last EDR Contact: 10/26/2018
Number of Days to Update: 63	Next Scheduled EDR Contact: 02/04/2019
	Data Release Frequency: Varies

## ***State and tribal voluntary cleanup sites***

### INDIAN VCP R7: Voluntary Cleanup Priority Listing

A listing of voluntary cleanup priority sites located on Indian Land located in Region 7.

Date of Government Version: 03/20/2008	Source: EPA, Region 7
Date Data Arrived at EDR: 04/22/2008	Telephone: 913-551-7365
Date Made Active in Reports: 05/19/2008	Last EDR Contact: 04/20/2009
Number of Days to Update: 27	Next Scheduled EDR Contact: 07/20/2009
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## VCP: Voluntary Cleanup Program Properties

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Date of Government Version: 07/30/2018  
Date Data Arrived at EDR: 07/31/2018  
Date Made Active in Reports: 09/07/2018  
Number of Days to Update: 38

Next Scheduled EDR Contact: 01/07/2019  
Data Release Frequency: Quarterly

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 09/18/2018

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **Local Lists of Hazardous waste / Contaminated Sites**

### **US HIST CDL: National Clandestine Laboratory Register**

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 09/21/2018	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 09/21/2018	Telephone: 202-307-1000
Date Made Active in Reports: 11/09/2018	Last EDR Contact: 08/28/2018
Number of Days to Update: 49	Next Scheduled EDR Contact: 12/10/2018
	Data Release Frequency: No Update Planned

### **HIST CAL-SITES: Calsites Database**

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005	Source: Department of Toxic Substance Control
Date Data Arrived at EDR: 08/03/2006	Telephone: 916-323-3400
Date Made Active in Reports: 08/24/2006	Last EDR Contact: 02/23/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 05/25/2009
	Data Release Frequency: No Update Planned

### **SCH: School Property Evaluation Program**

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 07/30/2018	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 07/31/2018	Telephone: 916-323-3400
Date Made Active in Reports: 09/07/2018	Last EDR Contact: 10/30/2018
Number of Days to Update: 38	Next Scheduled EDR Contact: 02/11/2019
	Data Release Frequency: Quarterly

### **CDL: Clandestine Drug Labs**

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 12/31/2017	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 06/12/2018	Telephone: 916-255-6504
Date Made Active in Reports: 08/06/2018	Last EDR Contact: 11/01/2018
Number of Days to Update: 55	Next Scheduled EDR Contact: 01/21/2019
	Data Release Frequency: Varies

### **TOXIC PITS: Toxic Pits Cleanup Act Sites**

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/1995	Source: State Water Resources Control Board
Date Data Arrived at EDR: 08/30/1995	Telephone: 916-227-4364
Date Made Active in Reports: 09/26/1995	Last EDR Contact: 01/26/2009
Number of Days to Update: 27	Next Scheduled EDR Contact: 04/27/2009
	Data Release Frequency: No Update Planned

### **US CDL: Clandestine Drug Labs**

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 09/04/2018

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 11/05/2018

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency

	Data Release Frequency: Annually

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 07/17/2018	Source: EPA
Date Data Arrived at EDR: 08/09/2018	Telephone: 703-416-0223
Date Made Active in Reports: 10/05/2018	Last EDR Contact: 10/04/2018
Number of Days to Update: 57	Next Scheduled EDR Contact: 12/17/2018
	Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 08/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/22/2018	Telephone: 202-564-8600

Number of Days to Update: 44	Next Scheduled EDR Contact: 02/04/2019
	Data Release Frequency: Varies

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

	Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Data Release Frequency: Varies

**HAZNET:** Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers for Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

395 PAGE MILL ROAD  
PALO ALTO, CA 94306

#### COORDINATES

## EXECUTIVE SUMMARY

### DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

Proposed NPL..... Proposed National Priority List Sites  
NPL LIENS..... Federal Superfund Liens

#### ***Federal Delisted NPL site list***

Delisted NPL..... National Priority List Deletions

#### ***Federal CERCLIS list***

FEDERAL FACILITY..... Federal Facility Site Information listing

#### ***Federal institutional controls / engineering controls registries***

LUCIS..... Land Use Control Information System

#### ***State and tribal leaking storage tank lists***

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

#### ***State and tribal registered storage tank lists***

FEMA UST..... Underground Storage Tank Listing  
INDIAN UST..... Underground Storage Tanks on Indian Land

#### ***State and tribal voluntary cleanup sites***

INDIAN VCP..... Voluntary Cleanup Priority Listing

### ADDITIONAL ENVIRONMENTAL RECORDS

#### ***Local Brownfield lists***

US BROWNFIELDS..... A Listing of Brownfields Sites

#### ***Local Lists of Landfill / Solid Waste Disposal Sites***

CA WMUDS/SWAT..... Waste Management Unit Database  
CA HAULERS..... Registered Waste Tire Haulers Listing  
INDIAN ODI..... Report on the Status of Open Dumps on Indian Lands  
ODI..... Open Dump Inventory  
DEBRIS REGION 9..... Torres Martinez Reservation Illegal Dump Site Locations  
IHS OPEN DUMPS..... Open Dumps on Indian Land

## EXECUTIVE SUMMARY

### **Local Lists of Hazardous waste / Contaminated Sites**

US HIST CDL..... Delisted National Clandestine Laboratory Register  
CA SCH..... School Property Evaluation Program  
CA Toxic Pits..... Toxic Pits Cleanup Act Sites  
US CDL..... National Clandestine Laboratory Register

### **Local Land Records**

CA LIENS..... Environmental Liens Listing  
LIENS 2..... CERCLA Lien Information

### **Records of Emergency Release Reports**

HMIRS..... Hazardous Materials Information Reporting System  
CA LDS..... Land Disposal Sites Listing  
CA MCS..... Military Cleanup Sites Listing

CA PROJECT..... PROJECT (GEOTRACKER)

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

EDR MGP..... EDR Proprietary Manufactured Gas Plants

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/17/2018 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b><i>HEWLETT-PACKARD (620)</i></b> Cerclis ID: 902134 EPA Id: CAD980884209	<b><i>620 - 640 PAGE MILL</i></b>	<b><i>0 - 1/8 (0.000 mi.)</i></b>	<b><i>0</i></b>	<b><i>60</i></b>

### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/17/2018 has revealed that there are 2

## EXECUTIVE SUMMARY

SEMS sites within approximately 1 mile of the target property.

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/17/2018 has revealed that there are 10 SEMS-ARCHIVE sites within approximately 1 mile of the target property.

### *Federal RCRA non-CORRACTS TSD facilities list*

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-TSDF sites within approximately 1 mile of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 13 RCRA-LQG sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 42 RCRA-SQG sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

EPA ID:: CAD981658313

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-CESQG site within approximately 1 mile of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 07/31/2018 has revealed that there is 1 US INST CONTROL site within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

### **State- and tribal - equivalent CERCLIS**

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/30/2018 has revealed that there are 15 CA ENVIROSTOR sites within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there is 1 CA SWF/LF site within approximately 1 mile of the target property.

### **State and tribal leaking storage tank lists**

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 87 CA LUST sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

Status: Completed - Case Closed  
Global Id: T0608537527

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 34 CA CPS-SLIC sites within approximately 1 mile of the target property.

CA HIST LUST: A listing of open and closed leaking underground storage tanks. This listing is no longer updated by the county. Leaking underground storage tanks are now handled by the Department of Environmental Health.

A review of the CA HIST LUST list, as provided by EDR, and dated 03/29/2005 has revealed that there are 51 CA HIST LUST sites within approximately 1 mile of the target property.

### State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 16 CA UST sites within approximately 1 mile of the target property.

### **State and tribal voluntary cleanup sites**

CA VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the CA VCP list, as provided by EDR, and dated 07/30/2018 has revealed that there are 3 CA VCP sites within approximately 1 mile of the target property.

### Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 46 CA SWEEPS UST sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

CA CERS TANKS: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

A review of the CA CERS TANKS list, as provided by EDR, and dated 07/23/2018 has revealed that there are 20 CA CERS TANKS sites within approximately 1 mile of the target property.

### **Records of Emergency Release Reports**

CA CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CA CHMIRS list, as provided by EDR, and dated 04/06/2018 has revealed that there are 43 CA CHMIRS sites within approximately 1 mile of the target property.

CA SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the CA SPILLS 90 list, as provided by EDR, and dated 06/06/2012 has revealed that there are 11 CA SPILLS 90 sites within approximately 1 mile of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 12 RCRA NonGen / NLR sites within approximately 1 mile of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there are 4 2020 COR ACTION sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

TSCA: The Toxic Substances Control Act identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site. The United States Environmental Protection Agency has no current plan to update and/or re-issue this database.

A review of the TSCA list, as provided by EDR, and dated 12/31/2016 has revealed that there is 1 TSCA site within approximately 1 mile of the target property.

TRIS: The Toxic Chemical Release Inventory System identifies facilities that release toxic chemicals to the air, water, and land in reportable quantities under SARA Title III, Section 313. The source of this database is the U.S. EPA.

A review of the TRIS list, as provided by EDR, and dated 12/31/2016 has revealed that there is 1 TRIS site within approximately 1 mile of the target property.

SSTS: Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

A review of the SSTS list, as provided by EDR, and dated 12/31/2009 has revealed that there is 1 SSTS site within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

PADS: The PCB Activity Database identifies generators, transporters, commercial storers and/or brokers and disposers of PCBs who are required to notify the United States Environmental Protection Agency of such activities. The source of this database is the U.S. EPA.

A review of the PADS list, as provided by EDR, and dated 06/01/2017 has revealed that there is 1 PADS site within approximately 1 mile of the target property.

GENENCOR INTERNATION License Number:: 04-27770-01	925 PAGE MILL ROAD	SW 1/4 - 1/2 (0.306 mi.)	BE643	1215

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, has revealed that there are 4 HIST FTTS sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there is 1 US AIRS site within approximately 1 mile of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 08/07/2018 has revealed that there are 289 FINDS sites within approximately 1 mile of the target property.

ECHO: ECHO provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide.

A review of the ECHO list, as provided by EDR, and dated 09/02/2018 has revealed that there are 77 ECHO sites within approximately 1 mile of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 168 CA CUPA Listings sites within approximately 1 mile of the target property.

EPA ID Number: CAD009122532 80001598

MA Financial Assurance: Information for hazardous waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.

A review of the MA Financial Assurance list, as provided by EDR, has revealed that there is 1 MA Financial Assurance site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
VARIAN ASSOC Database: Financial Assurance 2, Date of Government Version: 07/11/2018	611 HANSEN WAY	S 1/8 - 1/4 (0.169 mi.)	AM430	741

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there are 651 CA HAZNET sites within approximately 1 mile of the target property.

<b>AYDIN CORP</b>	<b>3180 HANOVER ST</b>	<b>SSW 1/2 - 1 (0.507 mi.)</b>	<b>CS944</b>	<b>2019</b>
<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FORMER AKINS AUTO BO	3045 PARK BLVD.	0 - 1/8 (0.000 mi.)	C34	107
KJ PARK	2555 PARK BOULEVARD	NNW 1/8 - 1/4 (0.159 mi.)	AJ405	663

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 07/23/2018 has revealed that there are 240 CA CERS sites within approximately 1 mile of the target property.

CA CIWQS: The California Integrated Water Quality System (CIWQS) is a computer system used by the State and Regional Water Quality Control Boards to track information about places of environmental interest, manage permits and other orders, track inspections, and manage violations and enforcement activities.

A review of the CA CIWQS list, as provided by EDR, and dated 09/04/2018 has revealed that there are 69 CA CIWQS sites within approximately 1 mile of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 31 EDR Hist Auto sites within approximately 1 mile of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 26 EDR Hist Cleaner sites within approximately 1 mile of the target property.

### EDR RECOVERED GOVERNMENT ARCHIVES

#### ***Exclusive Recovered Govt. Archives***

CA RGA LF: The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Resources Recycling and Recovery in California.

A review of the CA RGA LF list, as provided by EDR, has revealed that there is 1 CA RGA LF site within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 3 records.

<u>Site Name</u>	<u>Database(s)</u>
OLD QUARRY DISPOSAL SITE, STANDFOR	SEMS-ARCHIVE
SMITH KLINE & FRENCH LABORATORIES	SEMS-ARCHIVE
OREGON EXPWY UNDERPASS	SEMS-ARCHIVE

# OVERVIEW MAP - 5467378.6S

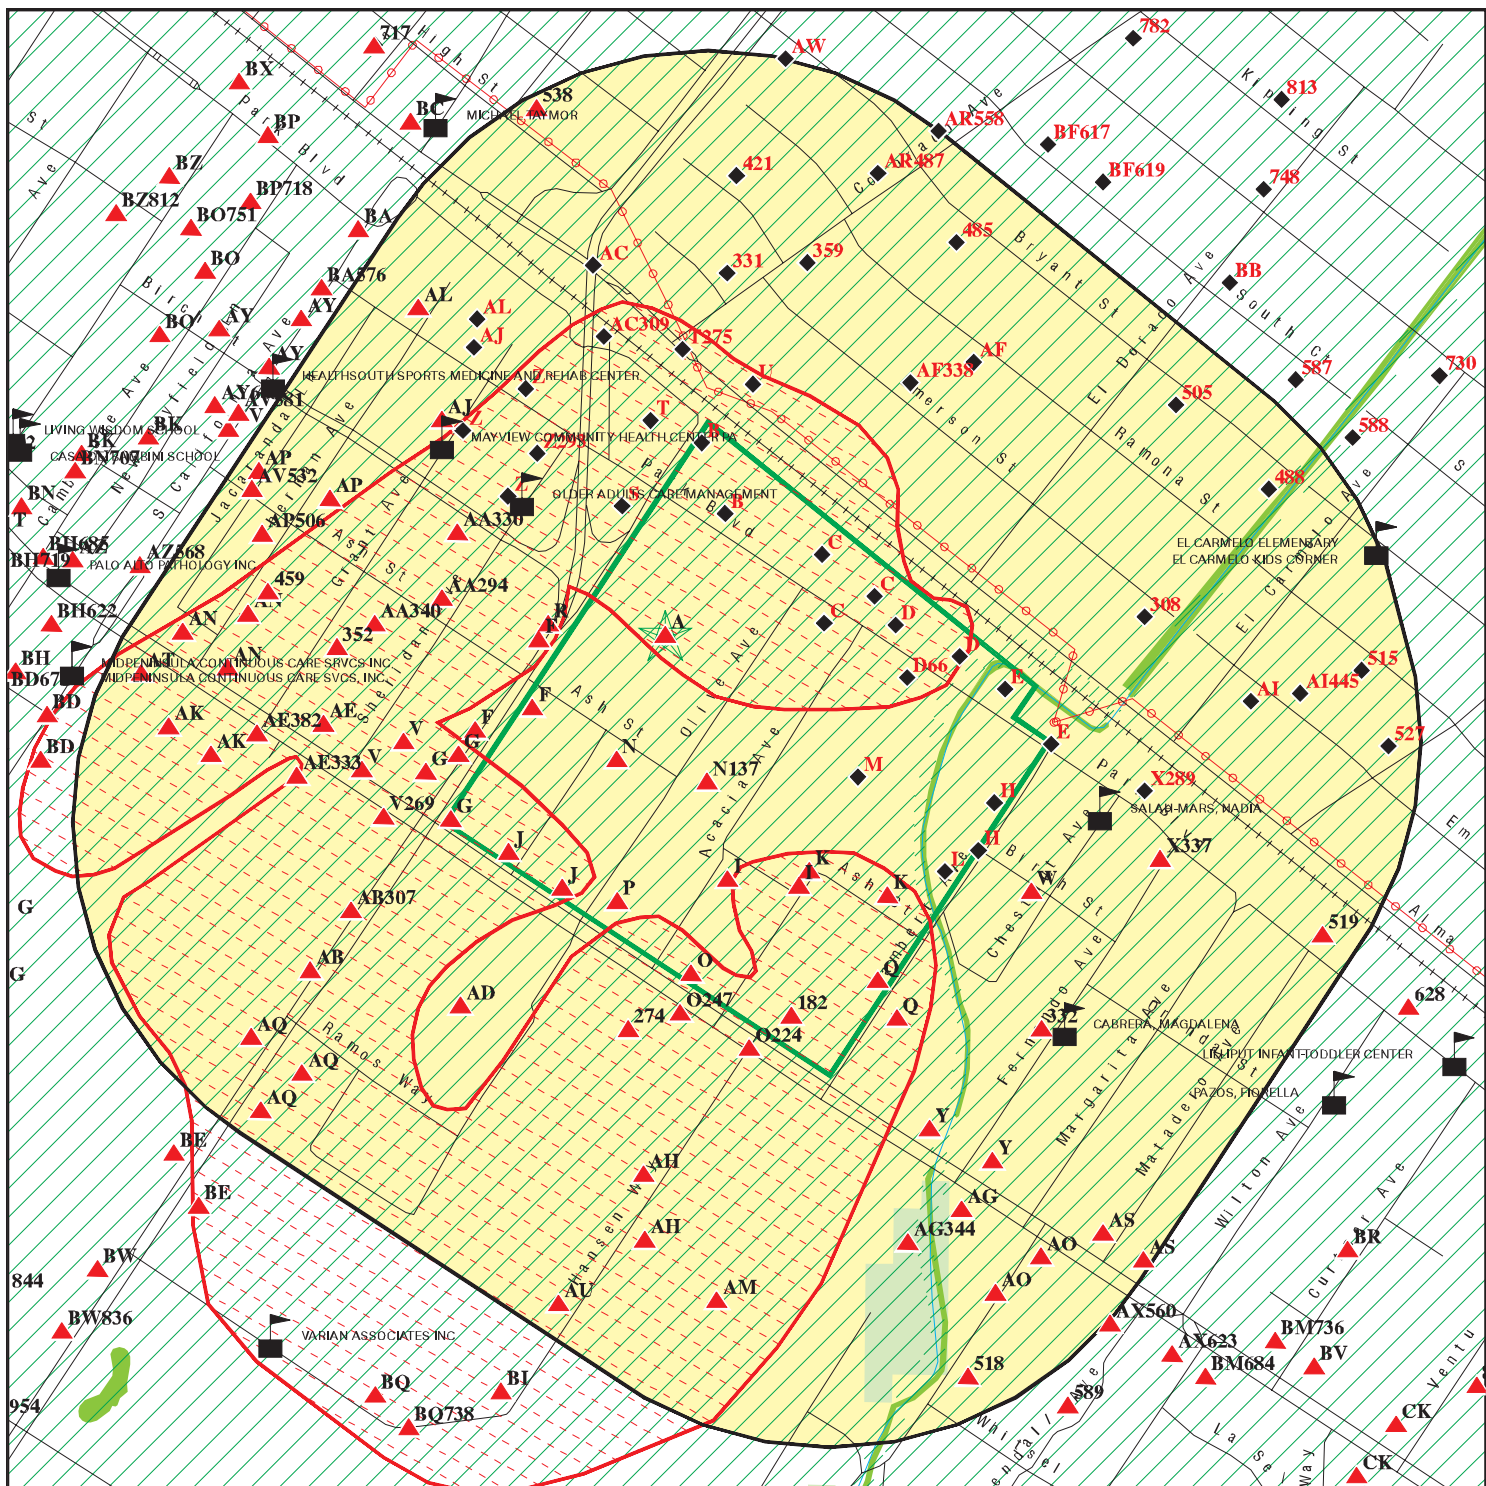

-  Target Property
-  Sites at elevations higher than or equal to the target property
-  Sites at elevations lower than the target property
-  Manufactured Gas Plants
-  National Priority List Sites
-  Dept. Defense Sites
-  Indian Reservations BIA
-  Areas of Concern
-  Power transmission lines
-  100-year flood zone
-  500-year flood zone
-  National Wetland Inventory
-  State Wetlands

Completed Sub Area Name: Not reported  
Completed Document Type: Correspondence  
Completed Date: 06/14/1993

Comments: The agenda from a meeting that Hewlett-Packard held with DTSC. The purpose of the meeting was to update DTSC on HP's recent activities regarding their Interim Status Document (ISD) permit and to obtain DTSC's concurrence of their approach to obtain final ISD termination. The agenda reviewed: the permitting history of the facility at 395 Page Mill Road between 1981 and 1993; the status of the ISD regulated units as of June 2, 1993; and HP's plan for going forward.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Correspondence  
Completed Date: 06/10/1994

Comments: A correspondence from DTSC to Hewlett-Packard stating that DTSC had reviewed the closure plan dated March 28, 1994 and the certification of closure for HP's 395 Page Mill Road facility. DTSC determined that the closure plan and certification were acceptable, and that the Interim Status Document for the facility was no longer in effect as of June 10, 1994. A copy of the March 28, 1994 revised closure plan referenced in the closure certification letter could not be found in DTSC's files when the site screening was performed.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Phase 1 Addendum  
Completed Date: 08/14/2017

Comments: DTSC performed a site screening to assess whether investigation or corrective action were needed to address releases of hazardous substances/wastes at the Site. Contamination at the Site has been a result of manufacturing electronic equipment at the Site. Chemicals of concern are mostly volatile organic compounds (VOCs) such as trichloroethene (TCE), tetrachloroethene (PCE), trichloroethane (TCA), and dichloroethene (DCE). The Regional Water Quality Control Board (RWQCB) has been the lead oversight agency since 1989. DTSC issued a closure certification for the hazardous waste management units at the site on June 10, 1994. The Site is subject to Site Cleanup Requirements as outlined in Order No. 94-130 issued by RWQCB on September 21, 1994. There is a Covenant and Environmental Restriction of Property recorded for the Site between RWQCB and Agilent Technologies restricting the usage of the Site to non-sensitive usage, and ensuring that none of the remediation or monitoring systems are disturbed. Soil remediation began in 1986, consisting of soil vapor extraction and excavation of contaminated soils. RWQCB acknowledged that the final soil cleanup standards had been met on January 30, 2008. RWQCB acknowledged that there was no threat of vapor intrusion for building occupants, and that there was no threat to short- or long-term human health in the surrounding study area. Groundwater remediation is ongoing at the Site, with performance monitoring for the effectiveness of ongoing enhanced in situ bioremediation.

Global Id: SL18321741  
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
Lead Agency Case Number: Not reported  
Latitude: 37.4249287000276  
Longitude: -122.139000892639  
Case Type: Cleanup Program Site  
Case Worker: RWP  
Local Agency: SANTA CLARA VALLEY WATER DISTRICT  
RB Case Number: 43S0053  
File Location: Regional Board  
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil  
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)  
Site History: This site is part of the COE Study Area - bounded by California, Olive, and Emerson Streets - that includes HP 640 PMR (MSCA site) and Varian 601 California. As part of the dual phase extraction (DPE) system GWET was shut down after reaching asymptotic groundwater-CVOC levels in 2001. Subsequent In-Situ Chemical Oxidation (ISCO) began late 2007 when groundwater CVOC levels in well RW-5 were still peaking at over 800 parts per billion (ppb). ISCO baseline groundwater sampling indicated that well OB11-2 - that had not been sampled since 1997 - contained PCE at 120,000 ppb. Subsequent ISCO

injections reduced PCE levels below 50 ppb that rebounded to over 1,000 ppb by the next ISCO monitoring event. When elevated groundwater-PCE levels were noted in OB11-2, the Water Board required a workplan to evaluate potential vapor intrusion assessment that was reviewed and approved in January 2008. The COE site-wide IA VI has been completed and there were no exceedances of the indoor air ESL in the breathing zone.

STATE MASTER

Registry ID: 110000609299

Environmental Interest/Information System  
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Summary Details:**

Conditions at proposal (June 24, 1988): Hewlett-Packard manufactured optoelectronic equipment on a 10-acre site at 620-640 Page Mill Road in Palo Alto, Santa Clara County, California, until 1986. In July 1981, at least 300 gallons of waste solvents, including 1,1,1-trichloroethane, trichloroethylene, toluene, xylene, and alcohols, leaked from a buried storage tank for a period of at least 3 weeks. The company excavated the tank and approximately 100 cubic yards of contaminated soil and transported the materials to a hazardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act. Since 1982, the company has been pumping and treating contaminated ground water. Tests conducted in 1986 by a consultant to Hewlett-Packard detected trans-1,2-dichloroethylene, 1,1-dichloroethylene, trichloroethylene, 1,1,1-trichloroethane, and xylene, several in high concentrations (290,000 parts per billion) in ground water under the tank area. An estimated 57,000 people obtain drinking water from municipal wells within 3 miles of the site. In 1987, Hewlett-Packard excavated an

additional 810 cubic yards of soil around the former tank area. Status February 21, 1990): Hewlett-Packard is conducting a remedial investigation/feasibility study RI/FS) to determine the type and extent of off-site contamination and identify alternatives for remedial action. A report on the RI/FS is due in February 1990.

**CPS-SLIC:**

Region: STATE  
**Facility Status: Open - Remediation**  
Status Date: 01/01/1987  
Global Id: SL720511210  
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
Lead Agency Case Number: Not reported  
Latitude: 37.4211115046554  
Longitude: -122.144923210144  
Case Type: Cleanup Program Site  
Case Worker: RWP  
Local Agency: SANTA CLARA VALLEY WATER DISTRICT  
RB Case Number: 43S0051  
File Location: Regional Board  
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Vapor  
Potential Contaminants of Concern: Trichloroethylene (TCE), 1,1,1-Trichloroethane (TCA), Arsenic, Tetrachloroethylene (PCE)  
Site History: The responsible parties conducted the following remedial measures: - Soil excavation of the on-site dry well source in 1990s - On-site soil vapor extraction for a few years - On- and off-site groundwater extraction that continues today - On-site In-situ chemical oxidation (ISCO) Groundwater migration is under lateral control in the A1 and A2 Zones with increased off-property extraction in EW-8 and EW-10. However, CVOC levels in the A2 Zone rose from non-detectable levels in 2000 to elevated levels since 2001. The installation and monitoring of a B-Zone well downgradient from the area of elevated A2-Zone CVOCs indicates the B Zone has not been significantly impacted. Following up on the last 5YR, the Responsible Parties are pilot testing on-property direct remediation of the A1 and A2 Zones through focused groundwater extraction that has successfully lowered CVOC levels from over DNAPL threshold to the high-hundreds to low thousands of parts per billion. On-property indoor air vapor intrusion is effectively controlled by the podium-parking design of the building that has a vapor barrier. Off-property VI evaluation is currently being conducted with the residential phase recently completed. The off-property VI evaluation concluded that VI is not occurring in single family homes and in the breathing zone of residential and commercial buildings with Regional Water Board and USEPA concurrence.

**PARK BOULEVARD (NO. 2901) - PALO ALTO (Continued)**

**S105960445**

Hazardous Waste Desc: containing the ditch was graded and paved with asphalt. An auto dealership is now located on the site of the former ditch.  
Threat To Public Health & Env: Analysis of the oily material indicated the presence of petroleum products and moderate concentrations of lead.  
Site Activity Status: Not reported  
As a Tier 3 site, this site will be listed annually in this report. If the asphalt cap is removed and the property is proposed for development for other usage, DHS may order that some additional abatement be conducted.

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

<p>Potential Contaminants of Concern:          Potential Media Affected:          Site History:</p>	<p>Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride          Aquifer used for drinking water supply, Soil Vapor          This property is within the COE study area. A facility closure was          permitted by the City of Palo Alto Fire Department. Based on the data          received by the DEH, groundwater and soil vapor sampling was          recommended. The groundwater and soil vapor data indicate that          groundwater beneath the site is contaminated by VOCs. The VOCs in          groundwater are likely off-gassing and creating a soil vapor plume          beneath the site as well. It does not appear that the former Auto          Body operation had a significant release. The contamination found          beneath the property appears to have migrated from an upgradient          source within the COE study area. The Regional Water Quality Control          Board should be consulted prior to any redevelopment or change in          land use.</p>

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System  
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

<b>CPS-SLIC:</b>	
Region:	STATE
<b>Facility Status:</b>	<b>Open - Eligible for Closure</b>
Status Date:	07/18/2018
Global Id:	SL0608525943
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number:	Not reported
Latitude:	37.4264282592534
Longitude:	-122.138335704803
Case Type:	Cleanup Program Site
Case Worker:	RWP
Local Agency:	Not reported
RB Case Number:	43S1107
File Location:	Regional Board
Potential Media Affected:	Soil, Soil Vapor
Potential Contaminants of Concern:	* Chlorinated Hydrocarbons, Arsenic, Waste Oil / Motor / Hydraulic / Lubricating
Site History:	Limited soil investigations indicates limited chlorinated volatile organic compounds (CVOCs) and petroleum hydrocarbon (PHC) contamination probably originating from prior industrial site use. Groundwater contamination probably originated from off-site HP/Varian sources within the COE plume. However, elevated soil gas chlorinated volatile organic compounds (CVOCs) in soil gas under the northeastern half of the property indicate potential vadose zone CVOC sources in that area. During excavation for building footings, PHC contamination associated with several underground storage tanks (USTs) was discovered in the central portion of the property. A followup investigation defined and excavated the soil-PHCs and groundwater-PHCs were defined to within property boundaries. The proposed remedy is excavation and disposal. The building has been constructed with potential IA VI mitigated through the vapor intrusion mitigation system (VIMS) consisting of a vapor barrier plus a subslab ventilation system. Indoor air testing will be conducted to verify that the VIMS is operating as designed.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Potential Contaminants of Concern: Trichloroethylene (TCE)  
Site History: Based on information presented in the May 17, 2012, Phase 1 Environmental Site Assessment, Green Mountain Reality is planning to redevelop the Site with a mixed-use (retail, commercial, and residential) structure. The proposed structure will be three stories above ground with one level below ground for parking. The Site is located within the California Olive Emerson (COE) Study Area, with is characterized with contaminated groundwater of various volatile organic compounds (VOCs) from several upgradient sites including former Hewlett Packard 640 Page Mill Road, former Varian 601 California Avenue, and former Hewlett Packard, 395 Page Mill Road. Analysis of groundwater in the Site vicinity show trichloroethene (TCE) concentrations ranging, generally, from 50 to 130 micrograms per liter (ug/L).

**Facility Status:** **Open - Inactive**  
Status Date: 08/25/2016  
Global Id: T10000005468  
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
Lead Agency Case Number: Not reported  
Latitude: 37.42154  
Longitude: -122.13842  
Case Type: Cleanup Program Site  
Case Worker: RWP  
Local Agency: Not reported  
RB Case Number: 43S1157  
File Location: Regional Board  
Potential Media Affected: Indoor Air  
Potential Contaminants of Concern: Trichloroethylene (TCE)  
Site History: The project is a redevelopment property within the COE plume with underlying groundwater probably impacted by the upgradient HP/Varian source properties. The Regional Water Board and USEPA are currently engaging the developer to submit a ste/risk management plan and indoor air testing workplan to verify that indoor air vapor intrusion.
