Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D008

. Waste name: LEAD

Violation Status: No violations found

MAP FINDINGS

**EL CAMINO CENTER (Continued)**

**S111711442**

Potential Contaminants of Concern: Trichloroethylene (TCE), Diesel, Gasoline  
Site History: The site is located within the California-Olive-Emerson (COE) regional plume of VOC affected groundwater. Chlorinated VOCs (CVOCs) associated with this regional plume, (including trichloroethene [(TCE)], have been found in soil and/or groundwater samples at low concentrations at the site at concentrations generally less than 5 a%g/L. Numerous shallow groundwater monitoring wells associated with monitoring and evaluation of the COE plume are located at on- and off-site locations in the vicinity of the former UST area. Typical groundwater depths (ranging between 13 to 17 feet bgs) and flow directions in the vicinity is understood (both within the greater COE study area as well as at the site), and based on groundwater elevation contour maps prepared by others groundwater flow direction at the subject site is north to northeast, towards San Francisco Bay (located approximately 2 miles northeast of the site). The former UST area is located in the southern portion of the main parking lot of the El Camino Center, a commercial retail shopping center. Prior to removal of the two diesel tanks (including one 1,000-gallon UST and one 1,150-gallon tank), groundwater samples were collected in 2010 in the vicinity of the former USTs. The groundwater sample results indicated low-to-moderate concentrations of total petroleum hydrocarbons quantified as gasoline (TPHg) and diesel (TPHd), and a general absence of benzene, toluene, ethylbenzene, and xylenes (BTEX) in groundwater in the near vicinity of the tanks. TPHg and TPHd were detected in grab groundwater samples at maximum concentrations of 2.1 and 24.3 milligrams per liter (mg/L), respectively; in contrast, relatively low maximum concentrations of benzene and ethylbenzene were detected at 9.4 and 11.4 micrograms per liter (a%g/L); respectively. All other petroleum hydrocarbon-related constituents were detected below San Francisco Bay Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs). The two former USTs were removed under permit with oversight by the DEH on October 18, 2011. During the tank excavation activities, approximately 750 cubic yards of hydrocarbon affected soil were removed and disposed off-site. Prior to backfilling, approximately 500 pounds of oxygen-releasing compound (ORC) was distributed across the bottom of the excavation to assist in the degradation of residual hydrocarbons in the subsurface. Surface conditions at the site consisted of an asphalt-cement parking lot, with little base rock material beneath. During previous investigations, subsurface soils encountered beneath the parking lot were predominantly clays to the maximum depth explored (28 feet bgs). A sand lense, ranging from 1 to 7 feet thick, is present at approximately 15 feet bgs. Saturated soil was encountered in each boring at varying depths ranging from approximately 15 feet to 25 feet bgs. Static depth to water was measured in most borings at approximately 16 feet bgs. Numerous shallow groundwater monitoring wells associated with monitoring and evaluation of the COE plume are located at on- and off-site locations in the vicinity of the former UST area. Based on current and historical groundwater elevation measurements and contour maps, groundwater flow direction at the subject site is north-to-northeast. Based on the most recent groundwater data, the extent of residual petroleum hydrocarbons in groundwater appears to be generally controlled by lateral groundwater flow in the downgradient north-to-northeast groundwater flow direction. Dissolved residual petroleum hydrocarbons are being depleted via natural attenuation, advection, and diffusion. The highest concentrations of petroleum

hydrocarbon residuals in groundwater appear to be in the near vicinity of the former tanks, represented by groundwater samples GW-4 and GW-8, and the downgradient extent of the residual hydrocarbon plume (less than 150 feet in length) is delineated by samples GW-1 and GW-2. The maximum concentrations of TPHd are less than the maximum groundwater concentrations detected during the 2010 investigation (24.3 mg/L); collected during the source removal actions (tank removal and overexcavations) in 2011.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

yards of contaminated soil were removed. In December 1983; company closed a water treatment system which the Department of Toxic Substances Control approved and 28 cubic yards of soil were removed and disposed of during the closure of the water treatment system. Dura Bond has been working with RWQCB concerning fuel spills and some groundwater contamination problems from an off-site source since 1984. Therefore, the site has been "decertified" and the previous cert is considered a removal action. The status of the site shows as referred to the RWQCB.

**FINDS:**

Registry ID: 110002653557

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

27 ft. CERS Description: Hazardous Waste Generator

Violations:  
Site ID: 141679  
Site Name: PARK AVENUE MOTORS  
Violation Date: 11-20-2017  
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.  
Violation Notes: 1) Observed the following un-labeled containers accumulating hazardous waste: - one 55 gallon paper used oil filter drum - one 55 gallon metal-encased used oil filter drum (managed as hazardous waste by facility) - two 16 gallon used oil rollers - three 3 gallon evacuators accumulating used oil - one 16 gallon used brake fluid roller 2) Observed one 55 gallon drum of paper used oil filters and one 55 gallon drum of metal used oil filters missing initial accumulate dates. The drums' contents are also incorrectly identified as "solid" for the physical property, because significant quantities of free-flowing used oil was observed at the bottom of both drums. 3) Observed the following container of hazardous waste labeled only with the content composition: one 5 gallon container of metal and paper used oil filters

for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Observed two 1 quart containers of OW-20 with free-flowing quantities of oil in the trash can on the shop floor. Note that free-flowing quantities of oil was also observed at the bottom of the trash can and suspected to have leaked from other open motor oil containers. Observed one 1 gallon container of antifreeze containing free-flowing quantities of antifreeze in the trash can near the tire area.

Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 141679  
Site Name: PARK AVENUE MOTORS  
Violation Date: 11-20-2017  
Citation: 40 CFR 1 265.201(c)(5) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.201(c)(5)

Violation Description: Failure to inspect hazardous waste tanks for the following, when present: 4) The construction materials of the tank at least weekly to detect corrosion or leaking of fixtures or seams. 5) The construction materials of, and the area immediately surrounding, discharge confinement structures (e.g., dikes) at least weekly to detect erosion or obvious signs of leakage (e.g., wet spots or dead vegetation).

Violation Notes: The used oil tank's mechanical leak gauge's float was observed to be 3/4 popped, indicating that a leak has been detected. Employees were unaware of how to inspect the leak gauge and what the popped leak gauge float meant. Additionally, a tank inspection log was posted near the tanks, but have not been filled out to demonstrate that inspections are being conducted. NOTE: Ensure that you are inspecting any discharge control systems, data gathered from monitoring equipment, and for uncovered tanks, the level of the waste in the tank at least daily. [CFR 265.201(c)]

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 11-20-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection. The facility is the branch location of the Audi Palo Alto dealership. New and used cars are taken to this location for service and hazardous wastes are generated from routine automotive maintenance activities. Hazardous wastes observed during inspection include used oil, used coolant, paper used oil filters, metal-encased used oil filters, used gasoline filters, used brake fluid, used rags, and used aerosol cans. Observed the following hazardous waste containers and tanks during inspection:  
- One 250 gallon used oil tank with integral secondary containment - One 150 gallon used coolant tank with integral secondary containment: Empty at the time of inspection - two 16 gallon used oil rollers; three 3 gallon evacuators accumulating used oil - one 16 gallon used coolant roller: Per facility staff, used coolant is stored in the used coolant roller until it becomes full, then it is transferred into the used coolant one 16 [Truncated]

metal-encased used oil filter drum (managed as hazardous waste by facility) - two 16 gallon used oil rollers - three 3 gallon evacuators accumulating used oil - one 16 gallon used brake fluid roller 2) Observed one 55 gallon drum of paper used oil filters and one 55 gallon drum of metal used oil filters missing initial accumulate dates. The drums' contents are also incorrectly identified as "solid" for the physical property, because significant quantities of free-flowing used oil was observed at the bottom of both drums. 3) Observed the following container of hazardous waste labeled only with the content composition: one 5 gallon container of metal and paper used oil filters

Violation Date: 11-20-2017  
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7

Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2) By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Observed two 1 quart containers of OW-20 with free-flowing quantities of oil in the trash can on the shop floor. Note that free-flowing quantities of oil was also observed at the bottom of the trash can and suspected to have leaked from other open motor oil containers. Observed one 1 gallon container of antifreeze containing free-flowing quantities of antifreeze in the trash can near the tire area. Santa Clara County Environmental Health

Violation Notes: confinement structures (e.g., dikes) at least weekly to detect erosion or obvious signs of leakage (e.g., wet spots or dead vegetation). The used oil tank's mechanical leak gauge's float was observed to be 3/4 popped, indicating that a leak has been detected. Employees were unaware of how to inspect the leak gauge and what the popped leak gauge float meant. Additionally, a tank inspection log was posted near the tanks, but have not been filled out to demonstrate that inspections are being conducted. NOTE: Ensure that you are inspecting any discharge control systems, data gathered from monitoring equipment, and for uncovered tanks, the level of the waste in the tank at least daily. Eval Date: 11-20-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine hazardous waste inspection. The facility is the branch location of the Audi Palo Alto dealership. New and used cars are taken to this location for service and hazardous wastes are generated from routine automotive maintenance activities. Hazardous wastes observed during inspection include used oil, used coolant, paper used oil filters, metal-encased used oil filters, used gasoline filters, used brake fluid, used rags, and used aerosol cans. Observed the following hazardous waste containers and tanks during inspection:

- One 250 gallon used oil tank with integral secondary containment -  
One 150 gallon used coolant tank with integral secondary containment:  
Empty at the time of inspection - two 16 gallon used oil rollers;  
three 3 gallon evacuators accumulating used oil - one 16 gallon used  
coolant roller: Per facility staff, used coolant is stored in the used  
coolant roller until it becomes full, then it is transferred into the  
used coolant one 16 [Truncated]

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Type: Routine done by local agency  
Eval Notes: Not reported  
Eval Division: Palo Alto City Fire Department  
Eval Program: HMRRP  
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 11-24-2014  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Facility is secondary site for shop located at 3045 Park Ave. Frame and body shop with paint booth. Paints are mixed, applied and stored for up to a week. Generally at end of week, cups opened and poured to either waste thinner or waste aqueous paint drums. Dry cups noted in trash and dumpster. Rags serviced by G&K. Most touch wiping is done using disposable fiber wipes. 30 gallon drum of glycol G020C: drum of glycol marked with start date during inspection. Emergency info posted on wall. Spill kits and extinguishers available. As a very small quantity generator (less than 27 gallons of waste/month) you may keep your waste indefinitely until you have a total of 27 gallons of waste onsite. Once you reach that 27 gallon level, you need to have the waste removed within 180 days. RECOMMEND SCHEDULING ROUTINE PICK UP OF ALL WASTES EVERY SIX MONTHS. IF LARGER CONTAINERS (E.G. OIL) ARE NOT FULL, LOOK INTO USING SMALLER CONTAINERS.  
Eval Division: Santa Clara County Environmental Health  
Eval Program: HW

Citation: HSC 6.5 25189.5(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a)  
Violation Description: Failure to properly dispose of hazardous waste at an authorized location.  
Violation Notes: Returned to compliance on 12/15/2014. Noted three small paint cups in the trash (appeared to be primer) which were not empty. ENSURE THAT ALL PAINT CUPS ARE EMPTIED PRIOR TO BEING PLACED IN THE TRASH.  
Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 90406  
Site Name: Akins Body Shop, Inc.  
Violation Date: 11-24-2014  
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)  
Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.  
Violation Notes: Returned to compliance on 12/15/2014. Could not locate any manifests for 2014 or 2013 demonstrating removal of thinner/solvent waste. Drum marked with accumulation start date and 2012 had PCL summary stating

and body shop with paint booth. Paints are mixed, applied and stored for up to a week. Generally at end of week, cups opened and poured to either waste thinner or waste aqueous paint drums. Dry cups noted in trash and dumpster. Rags serviced by G&K. Most touch wiping is done using disposable fiber wipes. 30 gallon drum of glycol G020C: drum of glycol marked with start date during inspection. Emergency info posted on wall. Spill kits and extinguishers available. As a very small quantity generator (less than 27 gallons of waste/month) you may keep your waste indefinitely until you have a total of 27 gallons of waste onsite. Once you reach that 27 gallon level, you need to have the waste removed within 180 days. RECOMMEND SCHEDULING ROUTINE PICK UP OF ALL WASTES EVERY SIX MONTHS. IF LARGER CONTAINERS (E.G. OIL) ARE NOT FULL, LOOK INTO USING SMALLER CONTAINERS.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Haz Waste Generator Program - Operations/Maintenance - General

Violation Notes: Returned to compliance on 11/15/2016. Used coolant container was held on-site between the dates of 1/13/14 and 12/4/15 according to Mr. Kim and records for disposal. Mr. Kim was advised that he may manage this container at the point of generation and store coolant waste for UP TO 1 year. All used oil must still be disposed of every 180 days because it does not qualify as point of generation.

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Stanford Arco Auto is a single bay auto shop that does auto service but no bodywork or painting. Facility generates the following wastes: used oil, used antifreeze, oily rags (disposed of as hazardous waste and given to hauler, according to Mr. Kim), used oil and gasoline filters, spent batteries (core exchange), oily absorbent (none observed), brake fluid (currently taken to shell for disposal, according to Mr. Kim), non-empty aerosol cans (none observed), brake shavings (taken as scrap metal), and spent fluorescent tubes (taken to Orchard Supply), Facility does not generate the following wastes: parts washing solution, spent gasoline, or oily water. Mr. Kim is the sole worker in the shop and has been trained to manage hazardous waste through industry experience. He stated that he inspects all waste containers at least weekly. The following areas were inspected:

Eval Type: Routine done by local agency  
Eval Notes: Stanford Arco Auto is a single bay auto shop that does auto service but no bodywork or painting. Facility generates the following wastes: used oil, used antifreeze, oily rags (disposed of as hazardous waste and given to hauler, according to Mr. Kim), used oil and gasoline filters, spent batteries (core exchange), oily absorbent (none observed), brake fluid (currently taken to shell for disposal, according to Mr. Kim), non-empty aerosol cans (none observed), brake shavings (taken as scrap metal), and spent fluorescent tubes (taken to Orchard Supply), Facility does not generate the following wastes: parts washing solution, spent gasoline, or oily water. Mr. Kim is the sole worker in the shop and has been trained to manage hazardous waste through industry experience. He stated that he inspects all waste containers at least weekly. The following areas were inspected: Communal dumpster, shop trash cans, waste storage area inside shop, service bay. The following documents [Truncated]

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 151336  
Site Name: SAY RAY FOREIGN AUTO SERVICE  
Violation Date: 04-15-2014  
Citation: HSC 6.5 25189.5(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a)  
Violation Description: Failure to properly dispose of hazardous waste at an authorized location.  
Violation Notes: Facility is not currently separating cased and non-cased oil filters. Per State of California, oil filters must be metal cased to qualify as "used oil filters" for recycling. Please begin separating these filters or place all filters in one drum but label the drum as "hazardous waste" with the contents "oily debris/filters".

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

**FINDS:**

Registry ID: 110002831785

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS ID: 10078396  
CERS Description: Hazardous Waste Generator

**Violations:**

Site ID: 58487  
Site Name: eCar Garage  
Violation Date: 01-26-2016  
Citation: 22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130  
Violation Description: Failure to properly handle, manage, label, and recycle used oil and fuel filters.  
Violation Notes: Returned to compliance on 03/11/2016. Observed paper and metal filters in the "drained used oil and fuel filters" container. Only metal-cased filters are exempt from regulation as a hazardous waste under the scrap metal provision. All paper filters must be disposed as hazardous waste and may be sent off with other oil contaminated solids.  
Violation Division: Santa Clara County Environmental Health

Violation Description: Haz Waste Generator Program - Operations/Maintenance - General  
Violation Notes: Returned to compliance on 03/11/2016. Noted saturated absorbent on the floor of waste storage sheds. Saturated rags were noted on top of waste storage containers and draining into a mobile waste container funnel. Ensure that absorbent used to clean up spills is picked up promptly and stored in a closed container. Saturated rags must be managed as hazardous waste and kept in closed, labeled containers. Saturated rags, saturated absorbent, and paper oil filters may be stored in the same container.

Violation Source: CERS

Evaluation:  
Eval General Type: Compliance Evaluation Inspection  
Eval Date: 01-26-2016  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Inspection conducted with Mickey Pierce. NOTES: Facility uses floor de-greaser in mop water and disposes of water down the drain. Advised Mr. Wein that de-greaser has a pH of 13 before dilution, and may qualify as hazardous waste even after dilution. If water has an oily sheen or a pH of less than 2 or greater than 12.5 it must be managed as hazardous waste. Facility opened in July of 2014 and no waste disposal records could be located for dates prior to March 13, 2015. The following violation was fixed at the time of inspection: 55 gallon container of used coolant had no physical state on the label. 55 gallon drained used oil and fuel filter container had no start date. 2x5 gallon buckets of drained used oil filters had no label and no lid. No emergency contact information was posted on-site.

**Violations:**

Site ID: 58487  
Site Name: eCar Garage  
Violation Date: 01-26-2016  
Citation: 22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130  
Violation Description: Failure to properly handle, manage, label, and recycle used oil and fuel filters.  
Violation Notes: Returned to compliance on 03/11/2016. Observed paper and metal filters in the "drained used oil and fuel filters" container. Only metal-cased filters are exempt from regulation as a hazardous waste under the scrap metal provision. All paper filters must be disposed as hazardous waste and may be sent off with other oil contaminated solids.

Violation Date: 01-26-2016  
Citation: 22 CCR 23 66273.31(a) - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.31(a)  
Violation Description: Failure of the universal waste handler to transfer universal waste to the appropriate designation facility.  
Violation Notes: Returned to compliance on 03/11/2016. Observed a non-empty aerosol container of brake cleaning solution in the trashcan among other empty aerosol containers. Mr. Wein removed the can at the time of inspection and was advised on empty container requirements for aerosol cans. Non-empty aerosol cans must be managed as universal waste.

Violation Source: CERS

Evaluation:  
Eval General Type: Compliance Evaluation Inspection  
Eval Date: 01-26-2016  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Inspection conducted with Mickey Pierce. NOTES: Facility uses floor de-greaser in mop water and disposes of water down the drain. Advised Mr. Wein that de-greaser has a pH of 13 before dilution, and may qualify as hazardous waste even after dilution. If water has an oily sheen or a pH of less than 2 or greater than 12.5 it must be managed as hazardous waste. Facility opened in July of 2014 and no waste disposal records could be located for dates prior to March 13, 2015. The following violation was fixed at the time of inspection: 55 gallon container of used coolant had no physical state on the label. 55 gallon drained used oil and fuel filter container had no start date. 2x5 gallon buckets of drained used oil filters had no label and no lid. No emergency contact information was posted on-site.

**FINDS:**

Registry ID: 110002830660

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**S105194787**

January 30, 1985: Woodward-Clyde conducted a gasoline boring investigation (8 exploratory borings with soil and grab groundwater samples). Free product was noted in several borings and a monitoring well. The DEH does not have reports of free product removal or the site redevelopment activities during this time. April 19, 1985: Water Board directive letter to install monitoring wells and associated correspondence with Page Mill - Park Company. June 1985: Two site monitoring wells installed by Woodward-Clyde and Pitcher Drilling. June 1985 and December 1985: Groundwater sampling events of 2 site monitoring wells. Between December 1985 and December 2010, no sampling or assessment activities were conducted. December 3, 2010: DEH letter requesting additional site assessment. May 24, 2011: Groundwater monitoring of 2 site wells and one downgradient offsite well. August 23, 2013: An 8-hour indoor air event was conducted; no COCs were detected (Attachment 6). August 23, 2013; Stellar Environmental conducts an exploratory boring site investigation and evaluation. August 2014: Stellar Environmental Solutions prepares an in-situ remedial product injection workplan: submitted and approved by DEH September 2014. October 20, 2015: pre-remedial injection quarterly groundwater monitoring of 2 site wells. October 27-28, 2014: remedial in-situ product injection implemented by Stellar Environmental Solutions. January 8, 2015: post-remedial injection quarterly groundwater monitoring of 2 site wells. April 2015: post-remediation quarterly groundwater monitoring of 2 site wells and one downgradient offsite well.

Local Agency: Not reported  
RB Case Number: 43S1170  
File Location: Regional Board  
Potential Media Affected: Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Trichloroethylene (TCE)  
Site History: The project is a redevelopment property within the COE plume with underlying groundwater probably impacted by the upgradient HP/Varian source properties. The developer plans to construct the building with a vapor intrusion mitigation system (VIMS) and water barrier. Indoor air testing will be conducted to verify that the VIMS is working as designed.

RB Case Number: 43S1076  
File Location: Regional Board  
Potential Media Affected: Soil  
Potential Contaminants of Concern: Arsenic, Diesel, Tetrachloroethylene (PCE)  
Site History:

This site is located at 2747 and 2787 Park Boulevard, Palo Alto, Santa Clara County. A concrete batch plant operated at the site from approximately the 1940s to the early 1990s. The site is within the California-Olive-Emerson (COE) Study Area, which is characterized by a groundwater plume of chlorinated solvents for sources located up-gradient of the site. Onsite sourced contamination is associated with underground storage tanks for various petroleum products, including diesel fuel and gasoline. Redevelopment plans proposed by 2747-87 Park Boulevard, LLC, include the demolition of an existing building and construction of a three-story Research and Development building and associated subsurface parking structures, paving, and landscaping.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 05-17-2017  
Citation: 23 CCR 16 2637 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2637

Violation Description: Failure to conduct secondary containment testing, or one or more of the following requirements: Perform the test within six months of installation and every 36 months thereafter. Use a procedure that demonstrates the system works as well as at installation. Use applicable manufacturer guidelines, industry codes, engineering standard, or professional engineer approval. Performed by a certified service technician or a licensed tank tester.  
Violation Notes: The secondary containment piping for the fuel and supply lines between the transition sump and the point where the secondary pipes end just after emerging from the building wall in the generator room has not

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 05-17-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: All underground storage tank (UST) monitoring equipment was tested today by UST Service Technician Jerry Sanouvang of Tait Environmental Services. Mr. Sanouvang has current ICC California UST Service Technician certification (exp. 4/5/2018) and Veeder-Root certification (exp. 3/26/2019). All sensors were tested using water and triggered audible and visual alarms on the Veeder-Root TLS-350 console. The UST fill spill bucket was hydrostatically tested for 1 hour and passed. Presence of mechanical overfill prevention valve in tank fill drop tube was visually confirmed. Notes: 1. All piping between the transition sump and the connection point to the generator is secondarily contained. The UST system stores Kerosene, so it does not qualify as an Emergency Generator Tank System (EGTS) as defined by California Health and Safety Code (EGTS is limited to Diesel storage). The aboveground secondary containment systems are thus subject to secondary containment testing requirements [Truncated]

Presence of mechanical overfill prevention valve in tank fill drop tube was visually confirmed. Notes: 1. All piping between the transition sump and the connection point to the generator is secondarily contained. The UST system stores Kerosene, so it does not qualify as an Emergency Generator Tank System (EGTS) as defined by California Health and Safety Code (EGTS is limited to Diesel storage). The aboveground secondary containment systems are thus subject to secondary containment testing requirements [Truncated]

Eval Notes:

All underground storage tank (UST) monitoring equipment was tested today by UST Service Technician Victor Guerrero of Tait Environmental Services and functioned properly. Mr. Guerrero has current ICC California UST Service Technician certification (exp. 6/9/2017) and Veeder-Root certification (exp. 6/28/2017). Sensors were tested using water and triggered audible and visual alarms on the Veeder-Root TLS-350 console. The UST fill spill bucket was hydrostatically tested for 1 hour and passed. Presence of mechanical overfill prevention valve in tank fill drop tube was visually confirmed. Notes: 1. Designated UST Operator monthly inspection and facility employee training records are in order. There have been no leak alarms since last year's monitoring system certification testing. 2. Records of visual inspections of unburied piping (Routine #1) monthly and each time the system is operated are in order. 3. Electronic reporting UST information reviewed for this inspection [Truncated]

Ms. McMahan has current Franklin Fueling Systems Incon Level 4 (TS-STs Sump Test System) certification (exp. 4/28/2018). The UST is a steel tank manufactured by Modern Welding. Test protocol was vacuum testing the tank annular spaces @ 10" Hg for 1 hours. Results: - Tank P1052U001 = PASS The underground product piping is double-wall Western Fiberglass flexible pipe. Vent line is double-wall Ameron Dualoy FRP. Test protocol was pressure testing the secondary containment pipe @ 5 p.s.i. for 1 hour. Results: - Tank P1052U001 Fuel Supply Line = Test boots replaced. Test pending curing of adhesive. - Tank P1052U001 Fuel Return Line = Test boot replaced. Test pending curing of adhesive. - Tank P1052U001 Vent Line = Testing not begun by end of inspection. \* \*

Eval Division: Santa Clara County Environmental Health  
Eval Program: UST  
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 05-17-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: All underground storage tank (UST) monitoring equipment was tested today by UST Service Technician Jerry Sanouvang of Tait Environmental Services. Mr. Sanouvang has current ICC California UST Service Technician certification (exp. 4/5/2018) and Veeder-Root certification (exp. 3/26/2019). All sensors were tested using water and triggered audible and visual alarms on the Veeder-Root TLS-350 console. The UST fill spill bucket was hydrostatically tested for 1 hour and passed. Presence of mechanical overfill prevention valve in tank fill drop tube was visually confirmed. Notes: 1. All piping between the transition sump and the connection point to the generator is secondarily contained. The UST system stores Kerosene, so it does not qualify as an Emergency Generator Tank System (EGTS) as defined by California Health and Safety Code (EGTS is limited to Diesel storage). The aboveground secondary containment systems are thus subject to secondary containment testing requirements [Truncated]

Eval Date: 06-01-2016  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: All underground storage tank (UST) monitoring equipment was tested today by UST Service Technician Victor Guerrero of Tait Environmental Services and functioned properly. Mr. Guerrero has current ICC California UST Service Technician certification (exp. 6/9/2017) and Veeder-Root certification (exp. 6/28/2017). Sensors were tested using water and triggered audible and visual alarms on the Veeder-Root TLS-350 console. The UST fill spill bucket was hydrostatically tested for 1 hour and passed. Presence of mechanical overfill prevention valve in tank fill drop tube was visually confirmed. Notes: 1. Designated UST Operator monthly inspection and facility employee training records are in order. There have been no leak alarms since last year's monitoring system certification testing. 2. Records of visual inspections of unburied piping (Routine #1) monthly and each time the system is operated are in order. 3. Electronic reporting UST information reviewed for this inspection [Truncated]

Eval Date: 07-03-2013  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Annual Monitoring Certification was performed by Victor Guerrero. All of his required certifications are current. The TLS-350 indicated "All Functions Normal" at the beginning and end of the inspection. System is a single 10,000 gallon kerosene tank with suction piping through a transition sump through aboveground piping into a room with a turbine emergency backup generator. Alarm history and system set-up reports were reviewed and returned to the service technician. The following sensors were tested by dipping in water: L-1 fill sump; L-2 annular space; L-3 generator room; L-4 piping sump; L-5 transition sump. All sensors provided audible and visual alarms at the control panels. All sensors were tagged by the service technician. Flapper valve was positioned in the drop tube. Overfill alarm set at 90% of tank capacity provided an audible and visual alarms when tested. Spill bucket passed its one-hour lake test. Monthly visual inspection reports for the [Truncated]

Potential Media Affected: Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Trichloroethylene (TCE)  
Site History: Since the construction of the Oregon Expressway Underpass (OEU), the OEU kept dry and passable by a 24/7 actively pumping gallery of extraction wells known as the OEU subdrain. The cone of depression effectively captured the entire COE plume and the pumped/extracted water has been directed to the nearest creek without pre-treatment until 1995. A groundwater treatment system was then installed to treat the groundwater before discharging to the creek.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110037256073

**Environmental Interest/Information System**

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

 Waste Type2: Not reported  
 Waste2: Contaminated Ground Water  
 Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.  
 Secondary Waste: Not reported  
 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.  
 Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.  
 Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

use is both industrial and commercial.

**Hazardous Waste Desc:** Historic releases of 20 chemicals into the soil and ground water onsite have been observed. Waste chemicals including 1,1,1-trichloroethane (TCA) trichloroethylene (TCE), toluene, acetone, xylene, alcohols and other chemicals used in the manufacturing process at the facility were stored in a tank. The concentration of chemicals are highest in the areas immediately below the tank's former location, particularly in the unsaturated zone.

**Threat To Public Health & Env:** There are six municipal standby wells as close as 4,000 feet from the site and several private wells located within a 3-mile radius. The standby wells serve a population of approximately 59,000 people during emergency situations. TCE has been detected in the ground water at concentrations as high as 340,000 parts per billion (ppb). Acetone and isopropyl (IPA) were also detected at high levels in the wells near the former tank area. The highest concentration detected in wells located approximately 800 feet down gradient from the source was 3800 ppb TCE in samples taken in November, 1985.

**Site Activity Status:** The subsurface soil and ground water at this site are contaminated with organic solvents believed to have leaked from an underground storage tank installed in 1967. The tank and 100 cubic yards of contaminated soil (to a maximum depth of 12.5 feet) were excavated and disposed of offsite in July, 1981. The RWQCB adopted site cleanup requirements for Hewlett-Packard on October 21, 1987.

**Evaluation:**

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 06-04-2015  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: Facility is a groundwater treatment unit and episodic RCRA LQG. CAD076314582 , CERS ID 10457527 Treatment system is authorized and operated as part of a superfund clean up. Extraction is limited to groundwater only, no vapor. Inspected system which includes untreated water tank, chemical injection tank (hydrogen peroxide), two carbon slurry extraction vessels (primary and polish)and an ozone generator/treatment system. Extraction vessels are set to run in sequence (primary then through polish to discharge) -When system is serviced for removal of slurry, primary treat tank is emptied, and valves changed to make "polish" tank the new primary treatment tank. Discharged to storm water system under NPDES permit. Had water reuse system, has been abandoned and reuse tank is marked "empty" Carbon slurry is removed approximately every 4 months as a F002 waste. System is operated by Stantec as contractor for HP. Have specific site emergency plan/health and safety management [Truncated]

**Completed Info:**

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Site Screening  
Completed Date: 02/03/1993  
Comments: The Oregon Expressway Underpass site is the location of a dewatering system that collects local groundwater for discharge into a culvert. This helps in maintaining a dry roadway and has been in operation since 1959. The site is adjacent to the Hewlett-Packard (HP) facility located at 640 Page Mill Road where groundwater contamination has been discovered. Contaminants have migrated from HP far enough to be intercepted by the Oregon Expressway Underpass dewatering system. In addition to HP, other facilities like Alza Corp, Aydin Energy, Commodore, etc. are believed to have contributed to the plume. The RWQCB is the lead agency for the site and has issued order 87-129 to address the problem. Contaminants detected at this site include the following: trichloroethylene 190 PPB; perchloroethylene 110 PPB; trichloroethylene 25 PPB; 1,1-dichloroethylene 3.1 PPB; and TRANS-1,2-dichloroethylene 24 PPB; U.S. EPA FIT has recommended NFA under CERCLIS.

Completed Area Name: PROJECT WIDE

**Completed Info:**

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Groundwater Migration Controlled  
Completed Date: 06/30/2014  
Comments: DTSC completed the Migration of Contaminated Groundwater Under Control Environmental Indicator (EI) for the Communications Power Industries (CPI) site and concluded "Yes" that it is controlled. CPI has operated at Building 2 within the Varian Site, which itself is a site where DTSC is overseeing cleanup activities. DTSC issued a Consent Order for the Varian Site in 1989. During the Varian Site characterization, the Building 2 CPI site was NOT identified as a source of contamination. Operation and maintenance is currently ongoing at the Varian Site under DTSC oversight. CPI still operates a facility in Building 2, with units under Permit-by-Rule.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 22219

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 37811

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 4127

Waste code: D005

Waste name: BARIUM

Amount (Lbs): 1457

Waste code: D006

Waste name: CADMIUM

Amount (Lbs): 6445

Waste code: D007

Waste name: CHROMIUM

Amount (Lbs): 19081

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

MAP FINDINGS

**SAND HILL PROPERTIES (Continued)**

**S119777537**

controls will be necessary to mitigate indoor air issues at this facility. Groundwater flow is presumed to be towards the northeast and depth to first encountered groundwater in the area is between 15 and 30 fbg. There are two groundwater monitoring wells on the subject property (V-9 and V-9X) that are part of ongoing monitoring plan for HP and Varian sites. The main chemicals observed in the wells are TCE, DCE, TCA and other volatile organic compounds. Indoor air monitoring was conducted within the first floor and garage areas sometime before June 3, 2014 and again on July 11, 2014. Levels of TCE were not detected within occupied offices on the first floor, but were detected above acceptable health screening levels within the garage, the elevator shaft, and the electrical equipment room within the garage. Based on the initial results, a memorandum from Melanie Morash of US EPA Region 9 to Mr. Deaton and Ms. Olivier dated June 3, 2014 recommended operation of ventilation fans in the garage during weekday working hours and on weekends as necessary. The reported levels of TCE from the July 11 sampling were 9.4 "g/m% in the garage and 130 "g/m% in the electrical storage room. It was determined the ventilation fans within the garage area should be operated during weekday working hours and on weekends as necessary. Additionally, the vapor intrusion risk should be evaluated as part of any renovations or new building construction and passive and active mitigation measures should be considered. Current Status: SHPDM LLC has submitted a vapor intrusion mitigation system design plan (VIMS) and it was approved by the Regional Water Board on July 20, 2017. The VIMS will consist of a sub-slab vapor venting system and a vapor barrier. A construction completion report will be submitted after installation and testing of the VIMS is complete and will include a VIMS operation and maintenance plan. Redevelopment activities are scheduled to begin in June 2018.

Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.

Primary Waste: CNWTRS

Waste Type2: Not reported

Waste2: Contaminated Ground Water

Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.

Secondary Waste: Not reported

Secondary Waste Type: Not reported

Design Flow: 0

Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.

Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

Description: RP states that an auxiliary tank overfilled causing a release of waste water from the tank that contained waste water from a plating operation. The release entered the storm drain system. The waste water contains low levels, 9ppm Copper and 4ppm Nickel, of contaminated water. The storm drain feeds into Matadero Creek. They are getting very low readings at the creek, less than .1 ppm copper and less than .05 ppm Nickel.

Description:	RP states that while filling a storage tank there was an overflow that caused a release of approximately 80 gallons of hydrochloric acid. Approximately 60 gallons was contained in the concrete area with the storage tank, while approximately 20 gallons was released onto the asphalt by the tanker truck. No waterway was impacted. At the request of the fire department approximately 300 personnel were evacuated from the building. The exterior release has been cleaned up and they are working on the containment area.

Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General  
Violation Notes: Returned to compliance on 11/15/2017. 1) Various types of two-part potting agents and RTV coatings that cure at room temperature or by heat curing are used in Building 1, Building 1A, Building 4, and Building 2. The SDS s available for the part B components identify the components as either meeting RCRA hazardous waste criteria for reactivity (D003 waste code) or non-RCRA hazardous waste criteria (96 hour acute aquatic toxicity) prior to curing. The facility s process is to dry all excess mixed potting agents and RTV coatings in accordance with manufacturer s instructions. During inspection, multiple un-labeled syringes ranging from being almost completely full to 1/4 full were observed to be curing. Curing excess potting agents and RTV coatings for non-hazardous disposal constitutes treatment of hazardous waste. Cease the practice of curing excess epoxy or apply for an on-site hazardous waste treatment permit from HMCDD. 2) Water is added to non-empty cans of paint that meets hazardous waste criteria [Truncated]

description of tank system piping (material, diameter); D) description of any internal and external pumps; and E) sketch or drawing of tank including dimensions. 3) Documented age of the tank system (if tank was previously used), if available, (otherwise, an estimate of the age); 4) Description and evaluation of any leak detection equipment; 5) Description and evaluation of any corrosion protection equipment, devices, or material; 6) Description and evaluation of any spill prevention or overflow equipment; 7) Description and evaluation of secondary containment for the tank system (secondary containment must meet minimum standards as specified in subsections (j)(1) through (j)(3) of this section) including applicable secondary containment for ancillary equipment as required in subsection 66265.193(f); 8) Hazardous characteristics of the waste(s) that have been or will be handled; 9) Prior to placing a new tank system or component in use, an independent, qualified installation inspector or an independent, qualified, professional engineer, registered in California, either of whom is trained and experienced in the proper installation of tank systems, shall inspect the system or component for the presence of any of the following items and document in writing the results of the inspection: A) Weld cracks or breaks; B) scrapes of protective coatings; C) corrosion; D) any structural damage or inadequate construction or installation such as cracks, punctures, damaged fittings. All discrepancies shall be documented in the assessment and remedied before the tank system

Violation Notes:

Returned to compliance on 10/21/2015. Prior tank assessment was conducted April 2010. Reassessment of system is required every 5 years. Please ensure that assessment includes all waste tanks, including used oil tanks, condensate holding tanks, cyanide holding tanks, and all waste treatment tanks.

Violation Date: 10-11-2017  
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 11/15/2017. Building 2: (Basement) one 55 gallon drum of used oil-contaminated filters and absorbent not tightly closed\*; one 55 gallon drum of contaminated bead blast media and one 55 gallon drum of bead blast vacuum contents and contaminated filters not tightly closed\*; (Baghouse Area) one 55 gallon drum of copper blast media not tightly closed\*; one 55 gallon drum of Aluminum/Titanium Oxide blast media not tightly closed\*; three gray containers of bead blast media waste completely open when hazardous waste is not being added or removed \*All drums were observed with lids loosely placed on top of drum when wastes were not being added or removed and no employees were observed in the nearby areas. Building 2: (Plating Shop) all hazardous waste containers accumulating contaminated personal protective equipment and debris utilize a swinging trash container top that cannot be tightly closed when waste it not being added or removed. Note that the accumulation containers are not [Truncated]

Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)

Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.

Violation Notes: The following hazardous waste treatment tanks were incompletely assessed to existing tank assessment standards on October 16, 2015, rather than undergoing a 5 year re-assessment [22CCR 66265.192(k)] for new tank systems: - (Basement) TB-1 first neutralization tank - (Basement) TB-2 second neutralization tank

Eval Notes: Walkthrough took place on 9/21/15 Notification of activities submitted on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is the flow through waste water treatment system which consists of cyanide destruction (two step) which is mixed with various metal bearing rinsewaters for removal of metals and pH adjustment. Drums are rinsed as additional influent to system. Resultant sludge is pressed to remove water. As a system that treats cyanide wastes, the additional requirements were confirmed: -cyanide plating area is equipped with dragout reduction drain racks between tanks and posted "dwell processes" to indicate drip, shake, spray rinse, etc.. - Cyanide specific training is provided and documented for plating room staff - Reviewed cyanide minimization using SB 14. Facility reported a reduction of 92% reduction in plating bath waste 2010-2014 and a 95% reduction in cyanide contaminated aqueous wastes 2010-2014 Recommend that map posted on CERS be made [Truncated]

Eval Notes:	FTU 002 is used to treat non-metal bearing alkaline cleaner wastes, scrubber waste, and a small quantity of non-metal bearing acidic wastes. The waste streams are automatically pumped to the first neutralization tank (TA-1) and then gravity fed to the second neutralization tank (TA-2). Sodium hydroxide is automatically fed into the neutralization tanks to adjust acidic pH waste streams. The waste streams are then pumped to the final polish neutralization tank associated with FTU 001 where any high pH wastes can be adjusted with sulfuric acid before POTW discharge. Both tanks are single-walled and share a continuously monitored vault secondary containment system described in the FTU 001 inspection report. TA-2 is equipped with a high level float switch. The following documents were reviewed: - Waste Analysis Plan - Inspection Schedule and Logs from the past 3+ years - 2015 Existing Tank System Assessments - Operating Logs - Closure Plan - 2017 Closure Cost [Truncated]

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 10-16-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: UNRESOLVED ISSUE THAT REQUIRES FOLLOW-UP: 1) Provide documentation that the secondary containment "vault" for the lead-contaminated condensate collection tank is 100 percent of the capacity of the tank [22CCR 66265.193(e)(2)(A)]. FTU 003 is used to treat lead-containing condensate from the HVAC system. Per Mr. Dale, the condensate occasionally meets hazardous waste criteria by having lead concentrations in the 12-14ppm range. The lead condensate is automatically pumped into the lead condensate collection tank located next to the cyanide rinse and floor wash tanks behind the building. A second overflow tank ( lead condensate overflow tank ) is located on the opposite side of the cyanide rinse and floor wash tanks. Any waste accumulation in the overflow tank would be metered into the main lead condensate collection tank. The lead condensate waste is then pumped from the collection tank into two ion exchange resin bottles, which are situated in series and located inside [Truncated]

Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General  
Violation Notes: Returned to compliance on 11/15/2017. 1) Various types of two-part potting agents and RTV coatings that cure at room temperature or by heat curing are used in Building 1, Building 1A, Building 4, and Building 2. The SDS s available for the part B components identify the components as either meeting RCRA hazardous waste criteria for reactivity (D003 waste code) or non-RCRA hazardous waste criteria (96 hour acute aquatic toxicity) prior to curing. The facility s process is to dry all excess mixed potting agents and RTV coatings in accordance with manufacturer s instructions. During inspection, multiple un-labeled syringes ranging from being almost completely full to 1/4 full were observed to be curing. Curing excess potting agents and RTV coatings for non-hazardous disposal constitutes treatment of hazardous waste. Cease the practice of curing excess epoxy or apply for an on-site hazardous waste treatment permit from HMCD. 2) Water is added to non-empty cans of paint that meets hazardous waste criteria [Truncated]

Violation Description: Failure to send a legible copy of each hazardous waste manifest to the Department within 30 days of each shipment of hazardous waste.

Violation Notes: Returned to compliance on 11/15/2017. The TSDf-copy of the following Uniform Hazardous Waste Manifests for hazardous wastes shipped out-of-state have not been submitted to DTSC, Exception Reports have not been submitted to DTSC, and the TSDf-copy of the manifests are available on-site for review: 008143620FLE (Ship Date: 12/15/2014) to Clean Harbors Aragonite LLC (ID Number: UTD981552177) 008143849FLE (Ship Date: 12/29/2014) to Clean Harbors Aragonite LLC (ID Number: UTD981552177) Disregard the corrective text below: Mail a copy of both TSDf-copy manifests to DTSC FACILITY MANIFESTS P.O. BOX 3000 SACRAMENTO, CA 95812-3000. \*Ensure that within 30 days from the date of transport, or submission for transport, of hazardous waste out of state, a legible copy of each manifest used is submitted to DTSC. The copy submitted to DTSC shall contain the signatures of the generator, all transporters, excepting intermediate rail transporters, and the out-of-state facility operator. Note that if you have not received [Truncated]

Eval Notes: Facility manufactures various high frequency devices with commercial, satellite and military applications. Walk through of facility took place on 9/21. The following buildings were inspected: 1, 1A, 1B,1C, 2, 2A, 4 Facility generally utilizes satellite accumulation for collection of routine contaminated solids (step cans) and small quantities of liquids (1 gal bottles). Do utilize some 55 gallon containers in select locations. Upon move to 90-day waste storage area, mark containers with second date noting arrival at area. Excess potting materials are set aside to solidify as a means to measure if potting agent in parts is fully set/cured. Majority of agent used is silicone based. Acetone used as cleaner in Building 1, collected and moved to cathode spray area of Building 4 for continued use as parts cleaner. Bottles of acetone transferred and stored for use after Building 1 are marked "acetone for reuse". Blast process generates waste with < regulatory levels of [Truncated]

Eval Notes: Lead condensate treatment system Walkthrough took place on 9/21/15 Notification of activities submitted on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is two tanks and two containers for treatment of water (cooling system condensate) which is high in lead. Condensate is routed to hold tank (with second tank as "overflow") then through two resin packed columns for metal removal. The following PBR related documentation was reviewed: Closure plan (2009) Closure cost estimate (updated 2015) Closure financial mechanism (insurance policy, issued 4/1/15 with term of one year) Waste analysis plan (updated 5/2013) --Noted that frequency of sampling is recorded as "as required". Suggest changing to "with change of process" or specify a actual time frequency. Treatment tank/area inspection logs

Eval Notes: Neutralization system Walkthrough took place on 9/21/15 Notification of activities submitted on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is a two-tank flow through waste water treatment system for the neutralization of non-metal bearing aqueous wastes from the plating shop. Tanks are gravity fed from T1 to T2, single walled. Tanks are in epoxy lined bermed area with liquid sensors at low spots in floor for release monitoring. Recommend that map posted on CERS be made more clear as to the locations of the systems. Cross hatched area makes map difficult to read. The following PBR related documentation was reviewed: Closure plan (2009) Closure cost estimate (updated 2015) Closure financial mechanism (insurance policy, issued 4/1/15 with term of one year) Waste analysis plan (updated 5/2013) --Noted that frequency of sampling is recorded as "as required". Eval Notes: Walkthrough took place on 9/21/15 Notification of activities submitted on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is the flow through waste water treatment system which consists of cyanide destruction (two step) which is mixed with various metal bearing rinsewaters for removal of metals and pH adjustment. Drums are rinsed as additional influent to system. Resultant sludge is pressed to remove water. As a system that treats cyanide wastes, the additional requirements were confirmed: -cyanide plating area is equipped with dragout reduction drain racks between tanks and posted "dwell processes" to indicate drip, shake, spray rinse, etc.. - Cyanide specific training is provided and documented for plating room staff - Reviewed cyanide minimization using SB 14. Facility reported a reduction of 92% reduction in plating bath waste 2010-2014 and a 95% reduction in cyanide contaminated aqueous wastes 2010-2014 Recommend that map posted on CERS be made [Truncated]

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: UNRESOLVED ISSUE THAT REQUIRES FOLLOW-UP: 1) Provide documentation that the secondary containment "vault" for the lead-contaminated condensate collection tank is 100 percent of the capacity of the tank [22CCR 66265.193(e)(2)(A)]. FTU 003 is used to treat lead-containing condensate from the HVAC system. Per Mr. Dale, the condensate occasionally meets hazardous waste criteria by having lead concentrations in the 12-14ppm range. The lead condensate is automatically pumped into the lead condensate collection tank located next to the cyanide rinse and floor wash tanks behind the building. A second overflow tank ( lead condensate overflow tank ) is located on the opposite side of the cyanide rinse and floor wash tanks. Any waste accumulation in the overflow tank would be metered into the main lead condensate collection tank. The lead condensate waste is then pumped from the collection tank into two ion exchange resin bottles, which are situated in series and located inside [Truncated]

Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General  
Violation Notes: Returned to compliance on 11/15/2017. 1) Various types of two-part potting agents and RTV coatings that cure at room temperature or by heat curing are used in Building 1, Building 1A, Building 4, and Building 2. The SDS s available for the part B components identify the components as either meeting RCRA hazardous waste criteria for reactivity (D003 waste code) or non-RCRA hazardous waste criteria (96 hour acute aquatic toxicity) prior to curing. The facility s process is to dry all excess mixed potting agents and RTV coatings in accordance with manufacturer s instructions. During inspection, multiple un-labeled syringes ranging from being almost completely full to 1/4 full were observed to be curing. Curing excess potting agents and RTV coatings for non-hazardous disposal constitutes treatment of hazardous waste. Cease the practice of curing excess epoxy or apply for an on-site hazardous waste treatment permit from HMCD. 2) Water is added to non-empty cans of paint that meets hazardous waste criteria [Truncated]

scrubber waste, and a small quantity of non-metal bearing acidic wastes. The waste streams are automatically pumped to the first neutralization tank (TA-1) and then gravity fed to the second neutralization tank (TA-2). Sodium hydroxide is automatically fed into the neutralization tanks to adjust acidic pH waste streams. The waste streams are then pumped to the final polish neutralization tank associated with FTU 001 where any high pH wastes can be adjusted with sulfuric acid before POTW discharge. Both tanks are single-walled and share a continuously monitored vault secondary containment system described in the FTU 001 inspection report. TA-2 is equipped with a high level float switch. The following documents were reviewed: -

Eval Date: 10-16-2017

Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: UNRESOLVED ISSUE THAT REQUIRES FOLLOW-UP: 1) Provide documentation that the secondary containment "vault" for the lead-contaminated condensate collection tank is 100 percent of the capacity of the tank [22CCR 66265.193(e)(2)(A)]. FTU 003 is used to treat lead-containing condensate from the HVAC system. Per Mr. Dale, the condensate occasionally meets hazardous waste criteria by having lead concentrations in the 12-14ppm range. The lead condensate is automatically pumped into the lead condensate collection tank located next to the cyanide rinse and floor wash tanks behind the building. A second overflow tank ( lead condensate overflow tank ) is located on the opposite side of the cyanide rinse and floor wash tanks. Any waste accumulation in the overflow tank would be metered into the main lead condensate collection tank. The lead condensate waste is then pumped from the collection tank into two ion exchange resin bottles, which are situated in series and located inside [Truncated]

Eval Type: Routine done by local agency

Eval Notes: UNRESOLVED ISSUE THAT REQUIRES FOLLOW-UP: 1) Provide documentation that the secondary containment "vault" for the Patio Area - South Section has a capacity of 100 percent of the capacity of the largest tank within its boundary without including the curb with the fence opening near the clarifier [22CCR 66265.193(e)(2)(A)]. NOTE TO FACILITY: 1) If the 55 gallon drum in the plating shop area is used for cyanide-contaminated anode bag rinsing, ensure that it is labeled with the generator name, EPA ID Number, and FTU number [22CCR 67450.3(c)(7)]. 2) Observed that the Closure Plan refers to non-SW-846 standards for sampling analyses (e.g. EPA 150.1, E200.7). Strongly recommend amending Closure Plan to use SW-846 test methods to ensure all equipment and containment have been properly decontaminated [22CCR

Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General

Violation Notes: Returned to compliance on 11/15/2017. 1) Various types of two-part potting agents and RTV coatings that cure at room temperature or by heat curing are used in Building 1, Building 1A, Building 4, and Building 2. The SDS s available for the part B components identify the components as either meeting RCRA hazardous waste criteria for reactivity (D003 waste code) or non-RCRA hazardous waste criteria (96 hour acute aquatic toxicity) prior to curing. The facility s process is to dry all excess mixed potting agents and RTV coatings in accordance with manufacturer s instructions. During inspection, multiple un-labeled syringes ranging from being almost completely full to 1/4 full were observed to be curing. Curing excess potting agents and RTV coatings for non-hazardous disposal constitutes treatment of hazardous waste. Cease the practice of curing excess epoxy or apply for an on-site hazardous waste treatment permit from HMCD. 2) Water is added to non-empty cans of paint that meets hazardous waste criteria [Truncated]

Violation Program: HW  
Violation Source: CERS

Site ID: 390435  
Site Name: COMMUNICATIONS & POWER INDUSTRIES  
Violation Date: 10-11-2017  
Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)

Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.

Violation Notes: The following hazardous waste tanks were incompletely assessed to existing tank assessment standards on October 16, 2015, rather than undergoing a 5 year re-assessment [22CCR 66265.192(k)] for new tank systems: - (Basement High Bay): used oil and water tank - west - (Basement High Bay): used oil and water tank east

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 09-22-2015  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Walkthrough took place on 9/21/15 Notification of activities submitted  
on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is the  
flow through waste water treatment system which consists of cyanide  
destruction (two step) which is mixed with various metal bearing  
rinsewaters for removal of metals and pH adjustment. Drums are rinsed  
as additional influent to system. Resultant sludge is pressed to  
remove water. As a system that treats cyanide wastes, the additional  
requirements were confirmed: -cyanide plating area is equipped with  
dragout reduction drain racks between tanks and posted "dwell  
processes" to indicate drip, shake, spray rinse, etc.. - Cyanide  
specific training is provided and documented for plating room staff -  
Reviewed cyanide minimization using SB 14. Facility reported a  
reduction of 92% reduction in plating bath waste 2010-2014 and a 95%  
reduction in cyanide contaminated aqueous wastes 2010-2014 Recommend  
that map posted on CERS be made [Truncated]

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: FTU 002 is used to treat non-metal bearing alkaline cleaner wastes,  
scrubber waste, and a small quantity of non-metal bearing acidic  
wastes. The waste streams are automatically pumped to the first  
neutralization tank (TA-1) and then gravity fed to the second  
neutralization tank (TA-2). Sodium hydroxide is automatically fed into  
the neutralization tanks to adjust acidic pH waste streams. The waste  
streams are then pumped to the final polish neutralization tank  
associated with FTU 001 where any high pH wastes can be adjusted with  
sulfuric acid before POTW discharge. Both tanks are single-walled and  
share a continuously monitored vault secondary containment system  
described in the FTU 001 inspection report. TA-2 is equipped with a  
high level float switch. The following documents were reviewed: -  
Waste Analysis Plan - Inspection Schedule and Logs from the past 3+  
years - 2015 Existing Tank System Assessments - Operating Logs -  
Closure Plan - 2017 Closure Cost [Truncated]

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 10-16-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: UNRESOLVED ISSUE THAT REQUIRES FOLLOW-UP: 1) Provide documentation that the secondary containment "vault" for the lead-contaminated condensate collection tank is 100 percent of the capacity of the tank [22CCR 66265.193(e)(2)(A)]. FTU 003 is used to treat lead-containing condensate from the HVAC system. Per Mr. Dale, the condensate occasionally meets hazardous waste criteria by having lead concentrations in the 12-14ppm range. The lead condensate is automatically pumped into the lead condensate collection tank located next to the cyanide rinse and floor wash tanks behind the building. A second overflow tank ( lead condensate overflow tank ) is located on the opposite side of the cyanide rinse and floor wash tanks. Any waste accumulation in the overflow tank would be metered into the main lead condensate collection tank. The lead condensate waste is then pumped from the collection tank into two ion exchange resin bottles, which are situated in series and located inside [Truncated]

Building 2. The SDS s available for the part B components identify the components as either meeting RCRA hazardous waste criteria for reactivity (D003 waste code) or non-RCRA hazardous waste criteria (96 hour acute aquatic toxicity) prior to curing. The facility s process is to dry all excess mixed potting agents and RTV coatings in accordance with manufacturer s instructions. During inspection, multiple un-labeled syringes ranging from being almost completely full to 1/4 full were observed to be curing. Curing excess potting agents and RTV coatings for non-hazardous disposal constitutes treatment of hazardous waste. Cease the practice of curing excess epoxy or apply for an on-site hazardous waste treatment permit from HMCD. 2) Water is added to non-empty cans of paint that meets hazardous waste criteria [Truncated]

Citation: 22 CCR 15 66265.192(k) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(k)

Violation Description: Failure of the new hazardous waste tank assessment to include all of the following information: 1) Tank configuration (i.e., horizontal, vertical), material of construction, and gross capacity (in gallons); 2) Design standard(s), if available, according to which the tank and ancillary equipment were or will be constructed and all of the following information: A) Material of construction; B) material thickness and the method used to determine the thickness; C) description of tank system piping (material, diameter); D) description of any internal and external pumps; and E) sketch or drawing of tank including dimensions. 3) Documented age of the tank system (if tank was previously used), if available, (otherwise, an estimate of the age); 4) Description and evaluation of any leak detection equipment; 5) Description and evaluation of any corrosion protection equipment, devices, or material; 6) Description and evaluation of any spill prevention or overfill equipment; 7) Description and evaluation of secondary containment for the tank system (secondary containment must meet minimum standards as specified in subsections (j)(1) through (j)(3) of this section) including applicable secondary containment for ancillary equipment as required in subsection 66265.193(f); 8) Hazardous characteristics of the waste(s) that have been or will be handled; 9) Prior to placing a new tank system or component in use, an independent, qualified installation inspector or an independent, qualified, professional engineer, registered in California, either of whom is trained and experienced in the proper installation of tank systems, shall inspect the system or component for the presence of any of the following items and document in writing the results of the inspection: A) Weld cracks or breaks; B) scrapes of protective coatings; C) corrosion; D) any structural damage or inadequate construction or installation such as cracks, punctures, damaged fittings. All discrepancies shall be documented in the assessment and remedied before the tank system

Violation Notes: Returned to compliance on 10/21/2015. Prior tank assessment was conducted April 2010. Reassessment of system is required every 5 years. Please ensure that assessment includes all waste tanks, including used oil tanks, condensate holding tanks, cyanide holding

Violation Date: 10-11-2017  
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31  
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.  
Violation Notes: Returned to compliance on 11/15/2017. Building 2: (Basement) Sodium hydroxide was observed to be leaking from the union connecting the sodium hydroxide container to FTU-002 and crystallizing on the container and piping run. Ensure that the crystallized sodium hydroxide is removed and properly disposed of and the container and system is maintained in a manner that prevents an unauthorized release of hazardous waste. Hazardous Waste Central Accumulation Area: ("Lack Pack"Locker) Saturated absorbent from a previous spill of hazardous waste was observed on the floor of the locker. Ensure saturated absorbent is immediately collected and managed as hazardous waste.

Eval Type: Routine done by local agency  
Eval Notes: Facility manufactures various high frequency devices with commercial, satellite and military applications. Walk through of facility took place on 9/21. The following buildings were inspected: 1, 1A, 1B,1C, 2, 2A, 4 Facility generally utilizes satellite accumulation for collection of routine contaminated solids (step cans) and small quantities of liquids (1 gal bottles). Do utilize some 55 gallon containers in select locations. Upon move to 90-day waste storage area, mark containers with second date noting arrival at area. Excess potting materials are set aside to solidify as a means to measure if potting agent in parts is fully set/cured. Majority of agent used is silicone based. Acetone used as cleaner in Building 1, collected and moved to cathode spray area of Building 4 for continued use as parts cleaner. Bottles of acetone transferred and stored for use after Building 1 are marked "acetone for reuse". Blast process generates waste with < regulatory levels of [Truncated]

Eval Notes: Neutralization system Walkthrough took place on 9/21/15 Notification of activities submitted on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is a two-tank flow through waste water treatment system for the neutralization of non-metal bearing aqueous wastes from the plating shop. Tanks are gravity fed from T1 to T2, single walled. Tanks are in epoxy lined bermed area with liquid sensors at low spots in floor for release monitoring. Recommend that map posted on CERS be made more clear as to the locations of the systems. Cross hatched area makes map difficult to read. The following PBR related documentation was reviewed: Closure plan (2009) Closure cost estimate (updated 2015) Closure financial mechanism (insurance policy, issued 4/1/15 with term of one year) Waste analysis plan (updated 5/2013) --Noted that frequency of sampling is recorded as "as required". Eval Notes: Walkthrough took place on 9/21/15 Notification of activities submitted on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is the flow through waste water treatment system which consists of cyanide destruction (two step) which is mixed with various metal bearing rinsewaters for removal of metals and pH adjustment. Drums are rinsed as additional influent to system. Resultant sludge is pressed to remove water. As a system that treats cyanide wastes, the additional requirements were confirmed: -cyanide plating area is equipped with dragout reduction drain racks between tanks and posted "dwell processes" to indicate drip, shake, spray rinse, etc.. - Cyanide specific training is provided and documented for plating room staff - Reviewed cyanide minimization using SB 14. Facility reported a reduction of 92% reduction in plating bath waste 2010-2014 and a 95% reduction in cyanide contaminated aqueous wastes 2010-2014 Recommend that map posted on CERS be made [Truncated]

Eval Type: Routine done by local agency  
Eval Notes: FTU 002 is used to treat non-metal bearing alkaline cleaner wastes, scrubber waste, and a small quantity of non-metal bearing acidic wastes. The waste streams are automatically pumped to the first neutralization tank (TA-1) and then gravity fed to the second neutralization tank (TA-2). Sodium hydroxide is automatically fed into the neutralization tanks to adjust acidic pH waste streams. The waste streams are then pumped to the final polish neutralization tank associated with FTU 001 where any high pH wastes can be adjusted with sulfuric acid before POTW discharge. Both tanks are single-walled and share a continuously monitored vault secondary containment system described in the FTU 001 inspection report. TA-2 is equipped with a high level float switch. The following documents were reviewed: - Waste Analysis Plan - Inspection Schedule and Logs from the past 3+ years - 2015 Existing Tank System Assessments - Operating Logs - Closure Plan - 2017 Closure Cost [Truncated]

Eval Type: Routine done by local agency  
Eval Notes: UNRESOLVED ISSUE THAT REQUIRES FOLLOW-UP: 1) Provide documentation that the secondary containment "vault" for the lead-contaminated condensate collection tank is 100 percent of the capacity of the tank [22CCR 66265.193(e)(2)(A)]. FTU 003 is used to treat lead-containing condensate from the HVAC system. Per Mr. Dale, the condensate occasionally meets hazardous waste criteria by having lead concentrations in the 12-14ppm range. The lead condensate is automatically pumped into the lead condensate collection tank located next to the cyanide rinse and floor wash tanks behind the building. A second overflow tank ( lead condensate overflow tank ) is located on the opposite side of the cyanide rinse and floor wash tanks. Any waste accumulation in the overflow tank would be metered into the main lead condensate collection tank. The lead condensate waste is then pumped from the collection tank into two ion exchange resin bottles, which are situated in series and located inside [Truncated]

quantities of liquids (1 gal bottles). Do utilize some 55 gallon containers in select locations. Upon move to 90-day waste storage area, mark containers with second date noting arrival at area. Excess potting materials are set aside to solidify as a means to measure if potting agent in parts is fully set/cured. Majority of agent used is silicone based. Acetone used as cleaner in Building 1, collected and moved to cathode spray area of Building 4 for continued use as parts cleaner. Bottles of acetone transferred and stored for use after Building 1 are marked "acetone for reuse". Blast process generates waste with < regulatory levels of [Truncated]

Eval Notes: Lead condensate treatment system Walkthrough took place on 9/21/15

Notification of activities submitted on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is two tanks and two containers for treatment of water (cooling system condensate) which is high in lead. Condensate is routed to hold tank (with second tank as "overflow") then through two resin packed columns for metal removal. The following PBR related documentation was reviewed: Closure plan (2009) Closure cost estimate (updated 2015) Closure financial mechanism (insurance policy, issued 4/1/15 with term of one year) Waste analysis plan (updated 5/2013) --Noted that frequency of sampling is recorded as "as required". Suggest changing to "with change of process" or specify a actual time frequency. Treatment tank/area inspection logs

Eval Notes: Neutralization system Walkthrough took place on 9/21/15 Notification

of activities submitted on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is a two-tank flow through waste water treatment system for the neutralization of non-metal bearing aqueous wastes from the plating shop. Tanks are gravity fed from T1 to T2, single walled. Tanks are in epoxy lined bermed area with liquid sensors at low spots in floor for release monitoring. Recommend that map posted on CERS be made more clear as to the locations of the systems. Cross hatched area makes map difficult to read. The following PBR related documentation was reviewed: Closure plan (2009) Closure cost estimate (updated 2015) Closure financial mechanism (insurance policy, issued 4/1/15 with term of one year) Waste analysis plan (updated 5/2013) --Noted that frequency of sampling is recorded as "as required". Suggest changing to "with change of process" or specify a actual time tank/area inspection [Truncated]

Eval Type: Routine done by local agency  
Eval Notes: Walkthrough took place on 9/21/15 Notification of activities submitted on CERS 2/26/15. Reviewed and approved by HMCD 3/16/15. System is the flow through waste water treatment system which consists of cyanide destruction (two step) which is mixed with various metal bearing rinsewaters for removal of metals and pH adjustment. Drums are rinsed as additional influent to system. Resultant sludge is pressed to remove water. As a system that treats cyanide wastes, the additional requirements were confirmed: -cyanide plating area is equipped with dragout reduction drain racks between tanks and posted "dwell processes" to indicate drip, shake, spray rinse, etc.. - Cyanide specific training is provided and documented for plating room staff - Reviewed cyanide minimization using SB 14. Facility reported a reduction of 92% reduction in plating bath waste 2010-2014 and a 95% reduction in cyanide contaminated aqueous wastes 2010-2014 Recommend that map posted on CERS be made [Truncated]

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: FTU 002 is used to treat non-metal bearing alkaline cleaner wastes, scrubber waste, and a small quantity of non-metal bearing acidic wastes. The waste streams are automatically pumped to the first neutralization tank (TA-1) and then gravity fed to the second neutralization tank (TA-2). Sodium hydroxide is automatically fed into the neutralization tanks to adjust acidic pH waste streams. The waste streams are then pumped to the final polish neutralization tank associated with FTU 001 where any high pH wastes can be adjusted with sulfuric acid before POTW discharge. Both tanks are single-walled and share a continuously monitored vault secondary containment system described in the FTU 001 inspection report. TA-2 is equipped with a high level float switch. The following documents were reviewed: - Waste Analysis Plan - Inspection Schedule and Logs from the past 3+ years - 2015 Existing Tank System Assessments - Operating Logs - Closure Plan - 2017 Closure Cost [Truncated]

Eval Date: 10-16-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: UNRESOLVED ISSUE THAT REQUIRES FOLLOW-UP: 1) Provide documentation that the secondary containment "vault" for the lead-contaminated condensate collection tank is 100 percent of the capacity of the tank [22CCR 66265.193(e)(2)(A)]. FTU 003 is used to treat lead-containing condensate from the HVAC system. Per Mr. Dale, the condensate occasionally meets hazardous waste criteria by having lead concentrations in the 12-14ppm range. The lead condensate is automatically pumped into the lead condensate collection tank located next to the cyanide rinse and floor wash tanks behind the building. A second overflow tank ( lead condensate overflow tank ) is located on the opposite side of the cyanide rinse and floor wash tanks. Any waste accumulation in the overflow tank would be metered into the main lead condensate collection tank. The lead condensate waste is then pumped from the collection tank into two ion exchange resin bottles, which are situated in series and located inside [Truncated]

Eval Type: Routine done by local agency  
Eval Notes: UNRESOLVED ISSUE THAT REQUIRES FOLLOW-UP: 1) Provide documentation that the secondary containment "vault" for the Patio Area - South Section has a capacity of 100 percent of the capacity of the largest tank within its boundary without including the curb with the fence opening near the clarifier [22CCR 66265.193(e)(2)(A)]. NOTE TO FACILITY: 1) If the 55 gallon drum in the plating shop area is used for cyanide-contaminated anode bag rinsing, ensure that it is labeled with the generator name, EPA ID Number, and FTU number [22CCR 67450.3(c)(7)]. 2) Observed that the Closure Plan refers to non-SW-846 standards for sampling analyses (e.g. EPA 150.1, E200.7). Strongly recommend amending Closure Plan to use SW-846 test methods to ensure all equipment and containment have been properly decontaminated [22CCR 67450.3(c)(8), 22CCR 67450.3(c)(11)(B)]. FTU 001 is used to treat metal-containing and cyanide-containing plating shop rinse waters and floor wastes and non-metal [Truncated]

Comments: Financial Assurance Mechanism accepted by DTSC Financial Responsibility Unit on 11-19-2015.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Pilot/Treatability Study Report  
Completed Date: 02/24/2017  
Comments: The Report describes the enhanced in situ bioremediation (EISB) pilot study implementation and associated performance and vapor intrusion monitoring results. Limited data from the initial injection indicates EISB may be effective at the site; however, some monitoring locations during the initial injections may have been too far from injection points to properly evaluate pilot study progress. Proposed additional fieldwork includes expansion of the pilot study injection area, as well as installation of additional monitoring wells in both the

Completed Document Type: Remedial Action Completion Report  
Completed Date: 06/11/1996  
Comments: Completed FRA for the site which includes groundwater extraction and treatment.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Design/Implementation Workplan  
Completed Date: 07/02/1995  
Comments: Approved Design documents for groundwater treatment system.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Removal Action Completion Report  
Completed Date: 04/06/1995  
Comments: Completed RA. Soil Vapor Extraction (SVE) system treated soils impacted with benzene, toluene, ethylbenzene, xylenes (BTEX) and total extractable petroleum hydrocarbons (TPH-G) which were detected near Building 3 onsite. Chemical concentrations have been reduced below remedial action objectives for the site. Verification sampling indicated that the SVE was successful in remediating affected soils. SVE system was shut down and is being removed from the site. The system extracted a cumulative mass of about 15,352 pounds of TPH-G from February 1992 through December 1993.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Financial Assurance Documentation  
Completed Date: 11/20/2015  
Comments: Financial Assurance Mechanism accepted by DTSC Financial Responsibility Unit on 11-19-2015.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Pilot/Treatability Study Report  
Completed Date: 02/24/2017  
Comments: The Report describes the enhanced in situ bioremediation (EISB) pilot study implementation and associated performance and vapor intrusion monitoring results. Limited data from the initial injection indicates EISB may be effective at the site; however, some monitoring locations during the initial injections may have been too far from injection points to properly evaluate pilot study progress. Proposed additional fieldwork includes expansion of the pilot study injection area, as well as installation of additional monitoring wells in both the Building 1 and Building 4 areas. DTSC approved the additional, recommended fieldwork.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Financial Assurance Documentation  
Completed Date: 11/19/2015  
Comments: Review completed by Financial Responsibility Unit - Financial assurance mechanism accepted and covers the approved cost estimate for operation and maintenance activities.

Completed Document Type: Design/Implementation Workplan  
Completed Date: 07/02/1995  
Comments: Approved Design documents for groundwater treatment system.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Removal Action Completion Report  
Completed Date: 04/06/1995  
Comments: Completed RA. Soil Vapor Extraction (SVE) system treated soils impacted with benzene, toluene, ethylbenzene, xylenes (BTEX) and total extractable petroleum hydrocarbons (TPH-G) which were detected near Building 3 onsite. Chemical concentrations have been reduced below remedial action objectives for the site. Verification sampling indicated that the SVE was successful in remediating affected soils. SVE system was shut down and is being removed from the site. The system extracted a cumulative mass of about 15,352 pounds of TPH-G from February 1992 through December 1993.

Completed Area Name: PROJECT WIDE

Completed Date: 03/19/1993  
Comments: Third Addendum to RI based on DTSC comments to Second Amendment and results of additional fieldwork.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Pilot/Treatability Study Report  
Completed Date: 10/27/2003  
Comments: The pilot study results showed VOCs in groundwater can be reduced by injecting sodium permanganate.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Pilot/Treatability Study Report  
Completed Date: 03/14/2005  
Comments: In-situ chemical oxidation pilot study has successfully reduced the concentrations of VOCs in the immediate area of the permanganate injection.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Monitoring Report  
Completed Date: 10/09/2007  
Comments: Groundwater concentrations are consistent with historical results.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Monitoring Report  
Completed Date: 11/07/2008  
Comments: Sodium permanganate injections have resulted in VOC concentration reductions in localized areas surrounding most injection wells. Sampling also demonstrate that injections did not mobilize hexavalent chromium at concentrations of concern.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Monitoring Report  
Completed Date: 05/18/2010  
Comments: Report approved 5/18/2010. Reduced monitoring for the first of the two yearly monitoring events to only 12 wells to be sampled and analyzed for VOCs. However, if resultant data collected from future monitoring events yield increasing concentrations or indicate possible plume migration, DTSC may require that monitoring be modified with regard to chemicals to be analyzed and/or frequency of monitoring events.

**CA BOND EXP. PLAN:**

Responsible Party: RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN  
Project Revenue Source Company: Not reported  
Project Revenue Source Addr: Not reported  
Project Revenue Source City,St,Zip: Not reported  
Project Revenue Source Desc: The RPs will be issued a remedial action order and are expected to comply with it. DHS has budgeted \$50,000 to provide for oversight and monitoring of investigation and cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with remedial investigations and cleanup activities.  
Site Description: Varian, an electronics manufacturing firm, has occupied the site since 1952. Investigations were initiated by Varian as part of a regional investigation in the Stanford Research Park.  
Hazardous Waste Desc: Investigations are ongoing in three areas of the facility. At the north end of the site, chlorinated solvents, including up to 1,500 parts per billion (ppb) of trichloroethene (TCE) have been detected in shallow ground water. Gasoline contamination has been found in soil and shallow ground water near Building 4. Investigations at an adjacent site, Aydin, revealed TCE at up to 1,400 ppb and DCE an 190 ppb in shallow ground water at the south end of the Varian facility.  
Threat To Public Health & Env: Contamination of shallow ground water poses a potential threat to deeper aquifers currently used as backup municipal water supplies. There are three municipal wells within a two mile radius of the site.  
Site Activity Status: DHS will prepare a consent order or a remedial action order requiring further investigation and site cleanup. Varian is continuing its investigation work and is expected to comply with the order.

Longitude:	-122.137047
Case Type:	Cleanup Program Site
Case Worker:	Not reported
Local Agency:	Not reported
RB Case Number:	43s1044
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports. Per CIWQS, the Water Boards terminated the facility's permit of July, 2009.

Region: STATE  
Facility Status: **Completed - Case Closed**  
Status Date: 07/30/2018  
Global Id: T10000001638  
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
Lead Agency Case Number: Not reported  
Latitude: 37.4261726546906  
Longitude: -122.143270969391  
Case Type: Cleanup Program Site  
Case Worker: RWP  
Local Agency: Not reported  
RB Case Number: 43S1133  
File Location: Regional Board  
Potential Media Affected: Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Trichloroethylene (TCE)  
Site History: The underlying HP/Varian plume has been under hydraulic control since the late 1980s with off-property extraction wells and the Oregon Expressway Underpass subdrain system operating on a 24/7 basis. Developer will conduct IA testing after building constructed the building with a VIMS even though groundwater-CVOC levels are very low. Not reported

Eval Date: 08-03-2016  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Facility uses steam autoclave and OPA cold sterilization solution which is neutralized with HydeOut before disposing to the drain. Surfaces are disinfected with disposable wipes, enzymatic tablets are used in the ultrasonic cleaner, carpules of lidocaine and whitener are used completely, and facility does not generate expired pharmaceuticals. No metal impression trays are used. First aid kits are sent back for exchange before expiration. Facility switched to digital x-rays in March and has some remaining x-ray waste. Facility has a total of 3x5 gallon containers of developer and 3x5 gallon containers of fixer with a total of approximately 6 gallons of fixer and 6 gallons of developer between them (last recycled in October of 2015, receipt reviewed). Facility has 1 box of lead bite wings which were last recycled for their metal content in 2013 (receipt reviewed). Amalgam separator is located in office and fixer waste is located on porch behind office in secondary [Truncated]

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: Facility uses steam autoclave and OPA cold sterilization solution which is neutralized with HydeOut before disposing to the drain. Surfaces are disinfected with disposable wipes, enzymatic tablets are used in the ultrasonic cleaner, carpules of lidocaine and whitener are used completely, and facility does not generate expired pharmaceuticals. No metal impression trays are used. First aid kits are sent back for exchange before expiration. Facility switched to digital x-rays in March and has some remaining x-ray waste. Facility has a total of 3x5 gallon containers of developer and 3x5 gallon containers of fixer with a total of approximately 6 gallons of fixer and 6 gallons of developer between them (last recycled in October of 2015, receipt reviewed). Facility has 1 box of lead bite wings which were last recycled for their metal content in 2013 (receipt reviewed). Amalgam separator is located in office and fixer waste is located on porch behind office in secondary [Truncated]

 Global Id: T0608500445  
 Latitude: 37.4190451960747  
 Longitude: -122.133711576462  
 Status: Completed - Case Closed  
 Status Date: 08/31/2016  
 Case Worker: AC  
 RB Case Number: 12-034  
 Local Agency: SANTA CLARA COUNTY LOP  
 File Location: All Files are on GeoTracker or in the Local Agency Database  
 Local Case Number: 06S3W12R01f  
 Potential Media Affect: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil

Potential Contaminants of Concern: Benzene, Toluene, Xylene, MTBE / TBA / Other Fuel Oxygenates, Gasoline  
 Site History: The site is currently an unoccupied former auto repair and commercial gasoline service station. An unauthorized release was reported in November 1986 following the removal of two gasoline underground storage tanks (USTs) in July of 1986. An unknown volume of soil was excavated to a depth of 12 feet below grade and disposed of off-site. Several rounds of investigation and sampling, including the installation of 12 monitoring wells, have adequately defined the nature and extent of the contaminant plume. Remediation included soil excavation, completed in 1986, and soil vapor extraction with air sparging conducted between January 2013 and September 2014. The most recent groundwater sampling data report concentrations that satisfy the groundwater criteria of the Low-Threat Case Closure Policy.

**STANFORD-MAYFIELD REDEVELOPMENT (Continued)**

**S112833005**

RB Case Number: 43S1150  
File Location: Regional Board  
Potential Media Affected: Soil, Soil Vapor  
Potential Contaminants of Concern: Trichloroethylene (TCE)  
Site History: The project is a redevelopment property within the COE plume with underlying groundwater probably impacted by the upgradient HP/Varian source properties. Elevated SV-TCE levels in the corner of the property overlying the COE plume prompted the developer to construct the building with a vapor intrusion mitigation system (VIMS) and water barrier. Post-mitigation IA testing verified that the VIMS is working as designed.

FINDS:

Registry ID: 110002635140

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.  
  
 Primary Waste: CNWTRS  
 Waste Type2: Not reported  
 Waste2: Contaminated Ground Water  
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.  
  
 Secondary Waste: Not reported  
 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The facility is not a POTW.  
 Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.  
  
 Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Potential Contaminants of Concern: Benzene, Toluene, Xylene, MTBE / TBA / Other Fuel Oxygenates, Gasoline  
Site History: 1985 Underground Storage Tank (UST) Removal and Replacement: During 1985, four steel USTs (two 5,000 gallon and two 8,000 gallon) were replaced with three double-walled fiberglass USTs. These activities are documented in GeoStrategies Inc.'s December 8, 1995 Site Remedial Investigation Summary. No other reports were found documenting these activities. 1985 Subsurface Investigation: During September 1985, EMCON Associates, Inc. (EMCON) advanced three exploratory borings (S-A, S-B, S-1) at the site. Up to 3,400 milligrams per kilogram (mg/kg) of total petroleum hydrocarbons as gasoline (TPHg) were detected in soil samples collected from boring SB-5. Boring S-1 was converted to a groundwater monitoring well. During December 1985, Gettler-Ryan Inc. installed three monitoring wells (S-2 through S-4) at the site. These investigations are summarized in EMCONs November 5, 1985 letter and EMCONs May 19, 1986 letter. 1986 Subsurface Investigation: During April 1986, EMCON installed four groundwater monitoring wells (S-5 through S-8) at the site. Soil samples were only obtained for soil classification. This investigation is summarized in EMCONs May 19, 1986 letter. 1986 Well Survey: During April 1986, EMCON conducted a water well survey and found 20 wells located within a one-half mile radius of the site. Six of the wells were listed as water supply wells. Details of the well survey are discussed in EMCONs May 19, 1986 letter. 1987 Subsurface Investigation: During December 1987, Pacific Environmental Group, Inc. (Pacific) installed three groundwater monitoring wells (S-9 through S-11) to assess gasoline constituent concentrations in soil and groundwater off site. Soil samples were only obtained for soil classification. The site investigation is summarized in Pacifics January 29, 1988 letter. 1988 Subsurface Investigation: During May 1988, Pacific installed one groundwater monitoring well (S-12), one vadose well (SP-1), and one recovery well pilot hole boring (RW-1) to assess gasoline constituent concentrations in soil and groundwater off site. Soil samples were obtained for soil classification, and one sieve analysis (RW-1) was conducted to determine future recovery well design parameters. The site investigation is summarized in Pacifics October 27, 1988 letter. 1988 Well Installation: During December 1988, Woodward-Clyde Consultants (WCC) installed one groundwater recovery well (SR-1) well at the location of pilot boring RW-1. The field activities are summarized in WCCs April 14, 1989 letter. 1989-1996 Groundwater Remedial Activities: A groundwater extraction and treatment (GWET) system operated at the site from 1989 to 1996. During this operation of the GWET system, 69,228,250 gallons of groundwater were extracted, removing approximately 13.9 gallons of TPHg and 2.21 gallons of benzene. The remediation activities are summarized in Pacifics April 29, 1996 Quarterly Report - Second Quarter 1996. 1989 Subsurface Investigation: During December 1989, GeoStrategies, Inc. (GSI) installed three off-site groundwater monitoring wells (S-14, S-15, and S-17) and one on site monitoring well (S-16). Up to 290 mg/kg of TPHg and 1.6 mg/kg of benzene were detected in soil samples collected from boring S-14. The site investigation is summarized in GSIs February 26, 1990 Well Installation/Interim Recovery System Report. 1991 Subsurface Investigation: During January 1991, GSI installed three groundwater monitoring wells (S-18 through S-20) on-site. Up to 100 mg/kg of TPHg and 1.2 mg/kg of benzene were detected in soil samples collected from borings S-19 and S-18, respectively. The site investigation is summarized in GSIs April 5, 1991 Well Installation Report. 1991 Well

Installations: During October 1991, GSI installed four groundwater monitoring wells (S-21 through S-24), three recovery wells (SR-2 through SR-4), and one vapor extraction well (SV-1) on site. Up to 1,400 mg/kg of TPHg and 4.5 mg/kg of benzene were detected in soil samples collected from boring SR-3. The site investigation is summarized in GSIs February 19, 1992 Well Installation Report. 1992-1996 Soil Vapor Remedial Activities: A soil vapor extraction (SVE) system operated at the site from December 1992 to April 1996. During the operation of the SVE system, 12,386.02 pounds (lbs) of TPHg and 33.34 lbs of benzene were extracted. These activities are documented in Toxichem Management Systems, Inc.s (Toxichems) April 30, 1997 Quarterly Report - Second Quarter 1996. 1994 Well Installations: During March and April 1994, Pacific installed two on-site air sparging wells (SP-2 and SP-3) and two off-site groundwater monitoring wells (S-25 and S-26). Up to 12 mg/kg of TPHg and 0.7 mg/kg of benzene were detected in soil samples collected from boring SP-3. The site investigation is summarized in Pacifics April 29, 1994 Groundwater Monitoring Well Installation Report. 1994 Air Sparge Test: During August 1994, Pacific performed a one-day air sparge test, and it was determined that air sparging was a viable technology for remediation. These activities are documented in Pacifics January 20, 1995 Quarterly Report - Fourth Quarter 1994. 1997 Bioremediation Test: During April 1997, Pacific performed an intrinsic bioremediation evaluation test on selected wells (S-1, S-2, S-24, S-25), and it was determined that oxygen enhancement is beneficial to intrinsic biodegradation. These activities are documented in Pacifics July 31, 1997 Quarterly Report - Second Quarter 1997. 1998 UST Upgrades: During 1998, the UST tank tops and dispensers were upgraded and the product piping was replaced. These activities are documented in Toxichems January 30, 2001 Corrective Action Plan. No other reports were found documenting these activities. 2000 Subsurface Investigation: During September 2000, Toxichem advanced four direct push borings (GP-1 through GP-4) on site and three direct-push borings (GP-5 through GP-7) off site. Up to 270 mg/kg of TPHg and 5.9 mg/kg of methyl tertiary butyl ether (MTBE) were detected in soil samples collected from on-site boring GP-4. Up to 0.257 mg/kg of benzene were detected in soil samples from boring GP-3. Up to 0.1 mg/kg of TPHg were detected in soil samples from off-site boring GP-5. Benzene was not detected in off-site borings. The site investigation is summarized in Toxichems October 13, 2000 Soil and Groundwater Investigation Report. 2000 Soil Vapor Risk Evaluation: During February 2000, Toxichem performed a soil vapor risk evaluation and determined that the concentration of existing soil vapor does not pose a significant risk to either commercial development of the former Combes Auto site or continued commercial use at the Shell-branded Service Station, and it was determined there is not a significant risk to the residents living immediately down gradient of the sites. These activities are summarized in Toxichems May 31, 2000 Soil Vapor Risk Evaluation. 2000 Conduit Study and Well Survey: During February 2000, Toxichem conducted a conduit survey review of preferential pathways for contaminant migration. Toxichem reviewed the well survey performed by EMCON in 1986 and determined that two wells were the only potentially down-gradient water-supply wells within a half-mile radius. The Fernando Well is completed to a depth of 1,020 feet below grade (fbg) and has a sanitary seal at 91 fbg. The well is currently inactive, but may be included in an emergency water supply well rehabilitation

project. Well 29 is an inactive domestic well located approximately one half-mile northeast of the site. Toxichem performed utility surveys and determined that it is unlikely that any private or City of Palo Alto utilities are acting as preferential migration pathways. 2000-2004 Groundwater Remedial Activities: Periodic groundwater extraction operated from January 2000 through October 2002, and a total of 29,243 gallons of groundwater was extracted from well S-2 by vacuum truck, resulting in the removal of approximately 1.25 pounds of TPHg, 0.03 pounds of benzene, and 5.2 pounds of MTBE. In March 2003, the GWET system was re-installed. This GWET system consisted of electric submersible pumps in wells SR-1 and SR-2. From March 2003 through November 2004, a total of 18,433,100 gallons of groundwater was extracted resulting in the removal of approximately 1.1 pounds of TPHg, 0.6 pounds of benzene, and 0.4 pounds of MTBE. These remedial activities are documented in Toxichems July 31, 2002 Quarterly Monitoring Report - Second Quarter 2002 and Toxichems October 26, 2005 Quarterly Monitoring Report - Third Quarter 2005. 2001 Subsurface Investigation: During December 2001, Toxichem advanced seven direct push borings (GP-8 through GP-14) off site. Up to 0.64 micrograms per liter (a%g/L) of benzene and 110 a%g/L of MTBE were detected in grab groundwater samples collected from off-site borings GP-8 and GP-12, respectively. The site investigation is summarized in Toxichems January 25, 2002 Additional Site Assessment and Feasibility Testing Report. 2001 Corrective Action Plan (CAP): Toxichem submitted a CAP summarizing site conditions, remedial action objectives, and remedial action plans. This summary is presented in Toxichems January 30, 2001 Corrective Action Plan. 2002 Subsurface Investigation: During April 2002, Toxichem advanced one pilot boring (FB-1) to approximately 80 fbg and installed two monitoring wells (S-27 and S 28). Soil samples were obtained for soil classification. TPHg and benzene were not detected from any of the grab groundwater samples. The site investigation is summarized in Toxichems July 15, 2002 Soil and Groundwater Investigation Report. 2006 UST Removal, Replacement: During June 2006, Cambria Environmental Technology, Inc. (Cambria) oversaw the removal of one 550-gallon, dual walled fiberglass waste oil UST and collected one soil sample (WO-1-8). These activities are documented in Cambrias August 15, 2006 Underground Storage Tank Removal Report. 2013 Site Conceptual Model (SCM): During April 2013, Conestoga Rovers & Associates (CRA) submitted a SCM to obtain and review the historical site data and identify any potential data gaps. This is documented in CRAs April 12, 2013 Site Conceptual Model. Groundwater Monitoring: Groundwater monitoring was conducted at the site from May 1988 to December 2014.

**BARRON PARK SHELL (Continued)**

**S103951943**

Violation Notes: Observed three approximately 1/3 full brake and parts cleaner aerosol cans in the trash dumpster. Immediately cease disposing of aerosol cans as trash unless they have been fully emptied of both contents and propellant and begin collecting and managing as hazardous waste or universal waste.

Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 11012  
Site Name: BARRON PARK SHELL  
Violation Date: 09-25-2017  
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22

Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.

Violation Notes: Metal-encased used oil filters are being as "drained used oil and gasoline filters" but are not being punctured/crushed/fully drained of all used oil. A small layer of used oil was observed in the 55 gallon accumulation drum. A copy of DTSC's Used Oil Filter Advisory will be provided with this inspection report. NOTE: While paper and metal-encased used oil filters were observed in separate accumulation containers, no consolidated manifests or bills of lading identify the paper used oil filters. Ensure the segregated paper used oil filters (i.e. used oil-saturated debris) are collected and managed as hazardous waste.

Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 11012  
Site Name: BARRON PARK SHELL  
Violation Date: 09-10-2013  
Citation: 22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130

Violation Description: Failure to properly handle, manage, label, and recycle used oil and fuel filters.

Violation Notes: Returned to compliance on 09/10/2013. Drums of used oil filters had "older" start date marked on it. Label replaced with one noting date of last pick up. NO CORRECTIVE ACTIONS REQUIRED.

Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 11012  
Site Name: BARRON PARK SHELL  
Violation Date: 10-02-2017  
Citation: 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)

Violation Description: Failure to have an approved UST Monitoring Plan.

Violation Notes: Returned to compliance on 10/20/2017. The UST Monitoring Plans for all three USTs incorrectly identifies the following elements: - Under Dispenser Containment (UDC) Monitoring: UDC Leak Alarm Triggers Automatic Pump Shutdown: Amend to NO - Under Dispenser Containment (UDC) Monitoring: Failure/Disconnection of UDC Monitoring System Triggers Automatic Pump Shutdown: Amend to NO A "marked-copy" will be provided with the inspection report.

Site ID: 11012  
Site Name: BARRON PARK SHELL  
Violation Date: 09-25-2017  
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)  
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.  
Violation Notes: Used antifreeze is routinely generated, but a pick-up has not occurred since 5/16/2016. Ensure that used antifreeze is picked up every 180 days.

Eval Notes: Oversaw annual monitoring system certification performed by UST Compliance Testing. Technician Tony Fontana has all applicable certifications which are valid ICC (ICC 5289227-UT, 6/23/2014), Veeder Root (A23686, 8/9/2015) and VMI (2332/2333, 6/29/2015). All three tank's annular sensors provided audible and visual alarms at the monitoring panel for both high and low liquid. All three STP sumps provided audible and visual alarms as well as positive shutdown of the turbines. UDC sensors at each dispenser (stand alone) provided shutdown of power to the pump. Pump reset achieved only by resetting breakers. Electronic LLDs for both 87 and 91 fuels provided alarms at monitoring panel as well as turbine shutdown. Tested with simulated 3gph, 10psi leak using VMI tester. Overfill provided by mechanical flapper valve in drop tubes. Spill buckets tested for one hour with water. Buckets showed no loss of liquid during test. Noted some liquid (water) in all three STP sumps. [Truncated]

Violation Description: Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).

Violation Notes: Returned to compliance on 10/20/2017. The Annual Monitoring System certification was due by 9/30/2017, but was not conducted until today, 10/2/2017. No further action is needed to correct this violation. However, ensure that arrangements are made to have the Annual Monitoring System Certification conducted every 12 months going forward.

Section(s) 25250.7  
Violation Description: Failure to prevent intentional contamination of used oil with other hazardous waste other than minimal amounts of vehicle fuel.  
Violation Notes: Used brake fluid is commingled with used oil and managed as used oil. Used oil cannot be contaminated with anything other than incidental amounts of vehicle fuel (e.g. engine blow-by ). Either begin collecting and managing the used brake fluid as a separate hazardous waste stream or begin managing the used oil/used brake fluid as fully-regulated hazardous waste.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 10-02-2017  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On-site for a routine inspection in conjunction with the Annual Monitoring System Certification performed by U.S.T. Compliance Testing service technician, Tony Fontana. Mr. Fontana has a current ICC Service Technician certification, Veeder-Root certification, and VMI LDT-890 certification. The underground storage tank (UST) systems are comprised of three 10,000 gallon underground storage tanks (Regular-1, 2-Aux. Regular, 3-Premium). The piping lines of both Regular USTs are manifolded and share a line leak detector. The tanks have reported installation date of 1/1/1985, are used for motor vehicle fueling, and use pressurized piping for product delivery. The fill spill buckets are located in fill sumps, but the fill sumps are not regulated secondary containment pursuant to 23CCR 2636(a)(1); mechanical overflow prevention protection devices ( flapper valves ) are used for overflow protection on all three USTs. The tank annular spaces are monitored by Veeder-Root model [Truncated]

Violations:

Site ID: 11012  
Site Name: BARRON PARK SHELL  
Violation Date: 09-25-2017  
Citation: HSC 6.5 25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25201(a)  
Violation Description: Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to this chapter.  
Violation Notes: Metal brake shavings are being disposed of to the trash. Either begin recycling the metal brake shavings for their scrap metal value or begin collecting and managing as hazardous waste.  
Violation Division: Santa Clara County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 11012  
Site Name: BARRON PARK SHELL  
Violation Date: 09-25-2017  
Citation: 22 CCR 23 66273.31(a) - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.31(a)  
Violation Description: Failure of the universal waste handler to transfer universal waste to the appropriate destination facility.  
Violation Notes: Observed three approximately 1/3 full brake and parts cleaner aerosol cans in the trash dumpster. Immediately cease disposing of aerosol cans as trash unless they have been fully emptied of both contents and propellant and begin collecting and managing as hazardous waste or universal waste.

Violation Date: 09-25-2017  
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22  
Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.  
Violation Notes: Metal-encased used oil filters are being as "drained used oil and gasoline filters" but are not being punctured/crushed/fully drained of all used oil. A small layer of used oil was observed in the 55 gallon accumulation drum. A copy of DTSC's Used Oil Filter Advisory will be provided with this inspection report. NOTE: While paper and metal-encased used oil filters were observed in separate accumulation containers, no consolidated manifests or bills of lading identify the paper used oil filters. Ensure the segregated paper used oil filters (i.e. used oil-saturated debris) are collected and managed as hazardous waste.

person who reconditions or remanufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of this section; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of this section shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Observed six 1 quart containers of 0W-40 containing pourable quantities of oil in the trash dumpster.

Violation Description: Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).

Violation Notes: Returned to compliance on 10/20/2017. The Annual Monitoring System certification was due by 9/30/2017, but was not conducted until today, 10/2/2017. No further action is needed to correct this violation. However, ensure that arrangements are made to have the Annual Monitoring System Certification conducted every 12 months going forward.

Citation: HSC 6.5 25250.7 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.7

Violation Description: Failure to prevent intentional contamination of used oil with other hazardous waste other than minimal amounts of vehicle fuel.

Violation Notes: Used brake fluid is commingled with used oil and managed as used oil. Used oil cannot be contaminated with anything other than incidental amounts of vehicle fuel (e.g. engine blow-by ). Either begin collecting and managing the used brake fluid as a separate hazardous waste stream or begin managing the used oil/used brake fluid as fully-regulated hazardous waste.

Violation Description: 16, Section(s) 2637(e)  
Failure to submit a copy of the secondary containment test results to the CUPA within 30 days after the test.

Violation Notes: Returned to compliance on 10/20/2017. A copy of the 2015 Secondary Containment Testing Report has not been submitted to HMCD. A copy of the report was acquired during today's inspection. No further action is needed. However, ensure that all future secondary containment testing reports are submitted to HMCD within 30 days of testing.

Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Used antifreeze is routinely generated, but a pick-up has not occurred since 5/16/2016. Ensure that used antifreeze is picked up every 180 days.

Oversaw annual monitoring system certification performed by UST Compliance Testing. Technician Tony Fontana has all applicable certifications which are valid ICC (ICC 5289227-UT, 6/23/2014), Veeder Root (A23686, 8/9/2015) and VMI (2332/2333, 6/29/2015). All three tank's annular sensors provided audible and visual alarms at the monitoring panel for both high and low liquid. All three STP sumps provided audible and visual alarms as well as positive shutdown of the turbines. UDC sensors at each dispenser (stand alone) provided shutdown of power to the pump. Pump reset achieved only by resetting breakers. Electronic LLDs for both 87 and 91 fuels provided alarms at monitoring panel as well as turbine shutdown. Tested with simulated 3gph, 10psi leak using VMI tester. Overfill provided by mechanical flapper valve in drop tubes. Spill buckets tested for one hour with water. Buckets showed no loss of liquid during test. Noted some liquid (water) in all three STP sumps. [Truncated]

Eval Notes: On-site for a routine inspection in conjunction with the Annual

Monitoring System Certification performed by U.S.T. Compliance Testing service technician, Tony Fontana. Mr. Fontana has a current ICC Service Technician certification, Veeder-Root certification, and VMI LDT-890 certification. The underground storage tank (UST) systems are comprised of three 10,000 gallon underground storage tanks (Regular-1, 2-Aux. Regular, 3-Premium). The piping lines of both Regular USTs are manifolded and share a line leak detector. The tanks have reported installation date of 1/1/1985, are used for motor vehicle fueling, and use pressurized piping for product delivery. The fill spill buckets are located in fill sumps, but the fill sumps are not regulated secondary containment pursuant to 23CCR 2636(a)(1); mechanical overfill prevention protection devices ( flapper valves ) are used for overfill protection on all three USTs. The tank annular spaces are monitored by Veeder-Root model [Truncated]

**FINDS:**

Registry ID: 110012231977

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status:	Completed - Case Closed
Status Date:	09/13/2016
Case Worker:	AC
RB Case Number:	19-097
Local Agency:	SANTA CLARA COUNTY LOP
File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	06S3W12F02f
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	1998 Phase I Environmental Site Assessment (ESA): According to Krazan & Associates' (Krazan's) February 11, 1998 Phase I Environmental Site Assessment report, the site was occupied by a brewery from at least 1884 to 1935 and by a Shell-branded service station from approximately 1939 to the early 1970s. The brewery facilities reportedly included a 1,200-gallon oil underground storage tank (UST). The Shell-branded service station had three 1,000-gallon gasoline USTs and a hydraulic lift. No information is available regarding the former locations or the removal of these USTs. Construction of the current on-site office building, which includes a basement occupying at least three-quarters of the site, would likely have discovered any USTs existing on site at that time. Krazan's report includes a copy of the January 3, 1973 building permit for construction of the building. The environmental site assessment also identified the property immediately across South California Avenue as the site of another gasoline service station from at least 1946 to 1970. 1998 Subsurface Investigation: In March 1998, Lowney & Associates (Lowney) drilled five exploratory borings (EB-1, EB-2, EB-3, EB-4, and EB-5). The borings were completed in the on-site building basement (approximately 9 to 10 feet below the adjacent street surface) to a depth of approximately 24 feet below grade (fbg). Groundwater was encountered in each boring at approximately 22 to 24 fbg. Grab groundwater samples contained up to 950,000 micrograms per liter (a%g/L) total petroleum hydrocarbons as diesel (TPHd) and 120,000 a%g/L total petroleum hydrocarbons as gasoline (TPHg). Up to 900 a%g/ L methyl tertiary-butyl ether (MTBE) was initially reported in four of the five groundwater samples analyzed

by EPA Method 8020. Confirmation analyses on the highest reported MTBE concentration (sample EB-3) by EPA Method 8260 did not detect MTBE. Lowney did not collect soil samples from the exploratory borings for chemical analyses or provide boring logs in their report. The investigation is detailed in Lowney's April 3, 1998 Ground Water Quality Evaluation report. 1999 Subsurface Investigation: In November 1999, Cambria Environmental Technology, Inc. (Cambria) installed three groundwater monitoring wells (MW-1, MW-2, and MW-3). Soil samples collected from the well borings contained up to 310 milligrams per kilogram (mg/ kg) TPHd, 1,300 mg/ kg TPHg, and 2.1 mg/kg benzene. No TPHd, TPHg, or benzene was detected in soil samples from well boring MW-3. Up to 0.76 mg/ kg MTBE was reported in soil samples analyzed by EPA Method 8020, but no MTBE was detected when the samples were analyzed by EPA Method 8260. Details of this investigation are summarized in Cambria's December 10, 1999 Subsurface Investigation Report and December 20, 1999 Subsurface Investigation Report Addendum. 2000 Subsurface Investigation: In April 2000, Cambria installed one groundwater monitoring well (MW-4) and drilled two soil borings (SB-5 and SB-6). The soil borings were drilled up gradient and down gradient from the former source area on site (based on the groundwater gradients obtained from wells MW-1 through MW-3). Well MW-4 was installed in the likely source area in the basement of the office building. Soil samples collected from SB-6 and MW-4 soil contained up to 140 mg/ kg TPHd, 710 mg/kg TPHg, and 0.92 mg/kg benzene. The only MTBE reported in soil samples was 0.29 mg/ kg (SB-6 at 30.5 fbg) by EPA Method 8020; however, MTBE was not detected in the same sample when analyzed by EPA Method 8260. No analytes were detected in the soil samples collected from boring SB-5, located down gradient from the site, with exception of 12 mg/ kg TPHd at 10 fbg. Grab groundwater samples were collected from SB-5 and SB-6, and two grab groundwater samples were collected from the MW-4 well boring. Grab groundwater samples contained up to 310,000 a%g/L TPHd, 130,000 a%g/L TPHg, and 11,000 a%g/L benzene. MTBE was not detected by EPA Method 8260, with the exception of 5 a%g/L in SB-5. Cambria's June 8, 2000 Additional Subsurface Investigation Report details investigation results. 2001 Conduit Study: In January 2001, Cambria performed a subsurface conduit study of the area adjacent to the site to determine the potential for underground utility trenches to affect groundwater flow near the site. Gas and water lines are generally located at depths of 3 to 8 fbg. Storm and sanitary sewer conduits often exist at greater depths than gas and water lines. Cambria measured the depths of the storm and sanitary sewer systems via access manholes adjacent to the site. The depths to flow lines in the conduits were all less than 5 fbg. Given that prevailing groundwater on site ranges from 17.5 to 20 fbg, it is unlikely that the gas, water, storm, or sanitary sewer lines on or near the site are acting as preferential pathways for migration of groundwater contaminants. The results were reported in Cambria's January 18, 2001 Conduit Study. 2001 Corrective Action Plan (CAP): Cambria's May 29, 2001 CAP reviewed site conditions and potential sensitive receptors, identified benzene, toluene, ethylbenzene, and total xylenes (BTEX) as the chemicals of concern (COCs), and evaluated soil vapor extraction and monitored natural attenuation as remedial alternatives. Cambria recommended that a Tier 2 risk-based corrective action (RBCA) analysis be performed to evaluate the potential health risk posed by site hydrocarbons. 2001 CAP Addendum, Indoor Air Sampling, and RBCA Analysis: Cambria's August 27, 2001

Corrective Action Plan Addendum: Risk-Based Corrective Action Analysis report presented the results of two indoor air samples collected on July 27, 2001. The samples were collected from near the floor level in the building basement using passive integrated air sampling devices (Summa canisters) over an approximate 4-hour period. No outdoor air "background" samples were collected, and a survey of the building basement for possible "background" sources of COCs was not conducted. The basement is not normally occupied, and air sampling was not conducted in any other occupied areas of the building. The maximum benzene air concentration obtained was 0.97 micrograms per cubic meter (a%/m<sup>3</sup>). Cambria presented a Tier 2 RBCA analysis, based on the American Society of Testing and Materials' RBCA approach. A conceptual site model identified indoor air inhalation of vapors originating from soil and groundwater as complete exposure pathways to be evaluated. Representative concentrations of soil, groundwater, and indoor air were presented based on maximum-detected concentrations in each media. Due to the existence of the commercial office building, a target carcinogenic risk level of 1x 10<sup>-6</sup> was presented for the commercial receptor scenario. In lieu of modeling indoor air concentrations from soil or groundwater, the results of indoor air sampling were used as the exposure point concentrations for evaluation of the indoor air inhalation exposure pathway. Cambria calculated a risk of 0.678 x 10<sup>-6</sup> as the risk due to the highest measured benzene concentrations in basement air, and identified an air concentration of 1.43 a%/m<sup>3</sup> benzene as the risk based screening level for a 1x 10<sup>-6</sup> risk level. 2001 CAP Addendum: Cambria's October 23, 2001 Corrective Action Plan Addendum presented proposed final cleanup levels for groundwater and recommended continued annual groundwater monitoring until the results can demonstrate a clear attenuating trend of COC concentrations and a time estimate to reach cleanup goals can be made. The Santa Clara Valley Water District approved the CAP in a January 25, 2002 letter. 2004 Remedial Method and Site Risk Assessment Re-evaluation: Cambria's January 29, 2004 Site Review-Remedial Method and Site Risk Assessment Re-evaluation letter re-evaluated the site and recommended continued annual groundwater monitoring until the results can demonstrate a clear attenuating trend of COC concentrations and a time estimate to reach cleanup goals can be made. The letter also stated that previous investigations and groundwater monitoring have shown that hydrocarbons are not significantly migrating from the site, and the decreases in hydrocarbon concentrations in off-site wells indicate that natural attenuation processes are working to remediate soil and groundwater. 2011 Subsurface Investigation: In April and May 2011, Conestoga-Rovers & Associates (CRA) installed one groundwater monitoring well (MW-5) and two sub-slab soil vapor probes (SVP-1 and SVP-2). Soil samples from the well boring contained up to 9.8 mg/kg TPHd and 65 mg/kg TPHg. No benzene or MTBE was detected in the soil samples. No BTEX was detected in soil vapor samples collected from the sub-slab probes. CRA's July 22, 2011 Subsurface Investigation Report details these results. 2013 Subsurface Investigation: In August 2013, CRA advanced two soil borings (SB-7 and SB-8). Grab groundwater samples from the well borings contained up to 40,000 a%/L TPHd and 110,000 a%/L TPHg. Benzene was only detected in one boring, SB-7 at 30 fbw, at a concentration of 1.2 a%/L. CRA's December 9, 2013 Subsurface Investigation Report details these results. 2013 Soil Vapor Sampling: CRA conducted quarterly soil vapor

sampling during 2013 from sub-slab soil vapor probes SVP-1 and SVP-2. No BTEX detections exceeded San Francisco Bay Regional Water Quality Control Board's environmental screening levels, 1 and no naphthalene was detected in any soil vapor samples. CRA's February 20, 2014 Soil Vapor Monitoring Report contains the historical soil vapor data. Groundwater Monitoring: Quarterly groundwater monitoring was conducted from fourth quarter 1999 through the end of 2000. Since 2001, semiannual groundwater monitoring has been conducted during the first and third quarters.

FINDS:

Registry ID: 110002666320

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Name: CALIFORNIA AVE. NORGE VILLAGE CLEANERS  
Violation Date: 04-13-2016  
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)  
Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.  
Violation Notes: Returned to compliance on 06/06/2016. Ms. Ellis stated that all dry cleaning lint is currently disposed of with regular trash. Ms. Ellis was advised that cleaning machine lint containing Green Earth likely qualifies as hazardous waste due to its toxicity. Determine if lint is hazardous (may chose to test lint via aquatic bioassay) and if determined to be hazardous waste, begin managing it in a closed and labeled container.

Eval Type: Routine done by local agency  
Eval Notes: Facility is a dry cleaning shop with one machine that uses Green Earth. Entire shop, including wet and dry cleaning areas, boiler room, and trashcans were inspected on 4/11/2016. Returned on 4/13/2016 to review consolidated manifests for disposal of solid dry cleaning filters and liquid sludges from 2013-2016. Facility uses towels in case of a spill, has serviced fire extinguishers, and has a current emergency posting. Waste containers are inspected weekly and employees are trained by Ms. Ellis. Aisle space is adequate, and the facility's EPA ID number is currently active. The following violations were corrected at the time of inspection by Ms. Ellis: 1x30 gallon container of hazardous waste was missing hazardous characteristics. Ms. Ellis fixed this label at the time of inspection.

Environmental Interest/Information System  
 HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110002860002

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type: Phase 1 Addendum  
Completed Date: 06/23/2017  
Comments: The Intevac/EO Sensors, Inc site is owned by Stanford University. General Electric conducted research and manufactured electron tubes and other devices at the site from 1954 to 1966. Varian Associates Electro-Optical Sensors Division began producing night vision products at the site in 1967. Varian sold the operations to Intevac in 1991, where they operated until 1996. The site was redeveloped in 1996 and an office building was constructed on the site. The site is a part of the California-Olive-Emerson study area of Palo Alto, and located adjacent to the 640 Page Mill Road HP Superfund Site. trichloroethylene (TCE), 1,1,1-trichloroethane, 1,1-dichloroethylene, and 1,1-dichloroethane have been detected in groundwater. Of the chlorinated VOCs that were detected in groundwater, TCE was the most widely distributed and detected at the highest concentrations. The site has been under the oversight of Regional Water Quality Control Board (RWQCB) since the 1980s. There is ongoing groundwater remediation under RWQCB's oversight.

Environmental Interest/Information System  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System  
 AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
