northwest of and adjacent to the 640 PMR site. Periodic IA sampling by the present occupants indicates that indoor air contaminants are below levels of concern. A deed restriction prohibits the use of groundwater for drinking water and excavation without notifying the Water Board. Varian conducted remedial actions at the site including:

- Soil excavation of the on-site dry well source in 1990
- On-site soil vapor extraction for a few years
- On- and off-site groundwater extraction from 1987 until 2003.
- On-site In-situ chemical oxidation (ISCO) for the last several years

After several years of in-situ chemical oxidation (ISCO), TCE DNAPL conditions persist in the courtyard area through the present time. Varian conducted additional RI in preparation for changing the remedy from ISCO to enhanced reductive dechlorination (ERD). The Water Board reviewed and approved a pilot study workplan for ERD and issued an approval letter. The pilot study and followup results indicated that ERD may be selected as the final remedy

 Eval Notes:                        Practice is general dentistry. Utilize film for x-rays. Spent develop  
 and fix solutions were collected in 30-gallon container, not using  
 smaller size due to no longer share with Mazzatti. Dr. Armistead hopes  
 to complete conversion to digital x-rays soon. Lead foil is collected  
 and picked up by metal recycler who also takes precious metals.  
 Amalgam disposal service provided for separator by mail back system.  
 Capsules and chariside collection to containers currently, no disposal  
 as of yet. Sterilization via steam autoclave. Also using KOH/IPA and  
 sulfamic acid based cleaning solutions. Both solutions determined to  
 be non-hazardous (pH) in 2011. Reviewed receipts for removal of  
 wastes.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Violation Notes: - Hazardous waste determination documentation is absent or lacks sufficient detail. Each station in each lab has unique materials and wastes. In most rooms, neither scientists nor EHS manager or specialist could provide details on what wastes were generated or how they were managed. - Observed 1 hazardous waste profile where "pipettes contaminated with acids" were shipped as "corrosive solids, basic, organic, n.o.s." - A waste profile for large scale recovery regular cake waste and high metal content batch waste was not available upon request. - Observed paper towels contaminated with brown liquids commingled with pipette tips and "Chemometec NucleoCassette" material in containers labeled as non-hazardous in the A suite labs. One of these containers with the contaminated towels had a brown hazardous waste collection container next to the bucket with a blank hazardous waste label. Genencor is an R&D facility that has large and small scale fermentation labs, an applications lab with washing machines to test how developed enzymatic cleaners work, and a number of chemistry, microbiology, and enzymology labs throughout the building. Facility generates hazardous waste in the following labs and locations: Small maintenance shop ( in warehouse- generates oily rags, used oil, scrap metal) Roughly 44 labs and rooms on floor 1 Roughly 15 labs and rooms on floor2 Facility has a large utility yard where the glycol cooling system is located. This area was not presented at the time of inspection and has not been included in this report. -Facility is an episodic RCRA Large Quantity Generator (ex: facility generated 2.2 kg of P030 and 6.8 kg of P105 listed waste [Truncated])

Violation Notes: Observed numerous issues with containers at the point of generation with missing or inadequate labels. The following observations have been provided as examples: - Accumulation room: 2x1 Liter bottles of blue stain with no hazardous characteristics or start date - D122- 1 Liter bottle of stain with no hazardous characteristics - A206- 500 mL ethanol waste bottle with a start date of 1/11/19 - D wing- 1 gallon sulfuric acid container with no start date - D wing- 1 step can of ethanol contaminated wipes that was marked as "empty weekly" in fermentation lab. This container must be marked as "empty daily" or have a date. Other containers in the facility for wipes were labeled compliantly. - D wing- 1x1 gallon container with a blank hazardous waste label - Dasqip- 1x 500 mL with no hazardous characteristics or physical state marked on the bottle - Media lab- 1 bottle of simply blue stain and 1 bottle of glucose hazardous wastes with no hazardous characteristics - 1 [Truncated]

Violation Notes: - Hazardous waste determination documentation is absent or lacks sufficient detail. Each station in each lab has unique materials and wastes. In most rooms, neither scientists nor EHS manager or specialist could provide details on what wastes were generated or how they were managed. - Observed 1 hazardous waste profile where "pipettes contaminated with acids" were shipped as "corrosive solids, basic, organic, n.o.s." - A waste profile for large scale recovery regular cake waste and high metal content batch waste was not available upon request. - Observed paper towels contaminated with brown liquids commingled with pipette tips and "Chemometec NucleoCassette" material in containers labeled as non-hazardous in the A suite labs. One of these containers with the contaminated towels had a brown hazardous waste collection container next to the bucket with a blank hazardous waste label. Lab employees and EHS specialist could not identify what was in either container. [Truncated]

(f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of this section shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Facility has a policy of emptying containers completely then immediately triple rinsing containers and managing resulting containers as non-hazardous waste. Observed a number of non-empty containers in trashcans throughout the facility that still contained free-flowing amounts of liquid. Violation Notes: Observed a number of inconsistencies between labs that could lead to illegal disposal of hazardous waste. Ensure that comprehensive hazardous waste determinations for each type of waste in each lab are made and documented. The following observations are included as examples: - Some labs have ethanol spray bottles and wipes that are used to clean counters, glassware, and instruments. In some labs, these wipes are disposed of in the trash, while in others they are disposed of in red step cans and are managed as hazardous wastes. Similarly, some labs with listed acids and bases have a hazardous waste container for debris contaminated with acids or bases, while other labs place these debris in biohazard bins. In the D wing lab, an employee stated that they put these materials in either the biohazard bin or the standard sharps container (cardboard box) located in the corner of the lab. - Facility EHS manager and specialist were unaware of how empty containers of acutely or [Truncated]

Violation Notes: Observed containers of hazardous waste at the point of generation accumulating waste for too long: - B116- 1 gallon container had a start date of 2/2/16, 1 gallon container had a start date of 3/9/16 - Granulation lab- 2x30 gallon containers of enzyme dust (these containers cannot be managed as point of generation since they exceed the 55 gallon limit) with start dates of 10/1/16 and 11/01/16 - B115- container with a start date appears to be "2/25/16" - A14L- 1 Liter container of ethanol waste with a start date of 8/22/13 - Dasqip- 500 mL waste bottle with a start date os 12/03/2015

Violation Notes: Observed numerous issues with containers at the point of generation with missing or inadequate labels. The following observations have been provided as examples: - Accumulation room: 2x1 Liter bottles of blue stain with no hazardous characteristics or start date - D122- 1 Liter bottle of stain with no hazardous characteristics - A206- 500 mL ethanol waste bottle with a start date of 1/11/19 - D wing- 1 gallon sulfuric acid container with no start date - D wing- 1 step can of ethanol contaminated wipes that was marked as "empty weekly" in fermentation lab. This container must be marked as "empty daily" or have a date. Other containers in the facility for wipes were labeled compliantly. - D wing- 1x1 gallon container with a blank hazardous waste label - Dasqip- 1x 500 mL with no hazardous characteristics or physical state marked on the bottle - Media lab- 1 bottle of simply blue stain and 1 bottle of glucose hazardous wastes with no hazardous characteristics - 1 [Truncated]

Violation Description: Failure to determine if the waste generated is a hazardous waste.  
Violation Notes: Observed a number of inconsistencies between labs that could lead to illegal disposal of hazardous waste. Ensure that comprehensive hazardous waste determinations for each type of waste in each lab are made and documented. The following observations are included as examples: - Some labs have ethanol spray bottles and wipes that are used to clean counters, glassware, and instruments. In some labs, these wipes are disposed of in the trash, while in others they are disposed of in red step cans and are managed as hazardous wastes. Similarly, some labs with listed acids and bases have a hazardous waste container for debris contaminated with acids or bases, while other labs place these debris in biohazard bins. In the D wing lab, an employee stated that they put these materials in either the biohazard bin or the standard sharps container (cardboard box) located in the corner of the lab. - Facility EHS manager and specialist were unaware of how empty containers of acutely or [Truncated]

Eval Notes: Inspection commenced on 3/21/17 and concluded on 3/30/17. Facility EHS specialist Laura Claverie-Diaz and EHS Manager Monique Henry have been working with the facility for approximately 6 months. Genencor is an R&D facility that has large and small scale fermentation labs, an applications lab with washing machines to test how developed enzymatic cleaners work, and a number of chemistry, microbiology, and enzymology labs throughout the building. Facility generates hazardous waste in the following labs and locations: Small maintenance shop ( in warehouse- generates oily rags, used oil, scrap metal) Roughly 44 labs and rooms on floor 1 Roughly 15 labs and rooms on floor2 Facility has a large utility yard where the glycol cooling system is located. This area was not presented at the time of inspection and has not been included in this report. -Facility is an episodic RCRA Large Quantity Generator (ex: facility generated 2.2 kg of P030 and 6.8 kg of P105 listed waste [Truncated])

Eval Notes: EPA ID CAR000049890 Facility generally utilizes satellite accumulation with step cans, with consolidation to 30 or 55 gallon containers for bags/liners removed from steps. Do generate intermittent waste from SF6 system (generates HF), one-off chemicals (various corrosives). Episodically generate LQG quantities of non-RCRA wastes in months where tooling/CNC machines coolant must be changed for quality assurance. --Keep log of quantities of waste by month at HW storage area to be able to determine if LQG status for any month and trigger more frequent (90 day) pick up. Operating a SF6 recycle capture unit to assist in ensuring that SF6 compressed gas cylinders are empty prior to shipment/return of cylinders. Empty containers generally returned to vendor for. Reviewed manifests for 2014-2016 Noted manifest 001093325 used for reshipment of "empty container" waste. Originally shipped under BOL ZZ00353617 on 4/27/16. Accepted at Veolia. . Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003  
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Type: Routine done by local agency  
Eval Notes: Facility is general and cosmetic dental practice. Switched from photo to digital x-rays approximately 3 years prior. Have amalgam trap on vacuum and sink lines. Serviced by PhotoWaste (last service Sept 2015) Chairside sink strainers are containerized in bucket and removed with trap service. Sterilization using only steam/pressure autoclave (SciCon). No cold/chemical sterilization. Sterilizer is sent offsite for maintenance and cleaning as needed. Disinfection of surfaces conducted using pre-impregnated Caviwipes Tarter control and other scale type cleaning using enzymatic tablets in water within a ultrasonic unit. Dispense lidicane with syringe and used carpules disposed of as sharps. Facility no longer generates hazardous waste (except universal waste amalgam). Will be removed from routine regulation by this Department. email: ellotsinger@gmail.com

Violation Description: Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Notes: Returned to compliance on 02/25/2016. Wastes from laboratories are consolidated into 55 and 30 gallon containers in a "90 day" waste accumulation area. The consolidation containers are marked only with the date waste is first added to the container. This date does not account for the time the waste has already been onsite. Consolidation containers need to be marked so that they reflect two dates: the date the first container of waste is added (triggering the 90 day storage limit) as well as the oldest date of any container added (triggering the 1 year LSAA accumulation limit), since the conditions of satellite accumulation state that the waste must be removed within the applicable time limit or 1 year, which occurs first. Violation Notes: Returned to compliance on 02/25/2016. Wastes from laboratories are consolidated into 55 and 30 gallon containers in a "90 day" waste accumulation area. The consolidation containers are marked only with the date waste is first added to the container. This date does not account for the time the waste has already been onsite. Consolidation containers need to be marked so that they reflect two dates: the date the first container of waste is added (triggering the 90 day storage limit) as well as the oldest date of any container added (triggering the 1 year LSAA accumulation limit), since the conditions of satellite accumulation state that the waste must be removed within the applicable time limit or 1 year, which occurs first. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003

. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Environmental Interest/Information System  
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes: Pip Printing has 2 offset printing presses and one plate maker. They generate silver waste from the plate maker which is shipped with a uniform manifest. Waste ink from offset rollers is managed in separate, small containers next to each printer and all waste ink is taken to the local Household Hazardous Waste Facility. Rollers are wiped down with rags which are laundered by Aramark. Trashcans and dumpsters were inspected and facility recycles all fluorescent light tubes and batteries. Noted 1 container of RICOH C7100 copier toner (magenta) containing powder in the trash can at the shop. Mr. Maystead indicated that he has determined these toners not to be hazardous waste and that manufacturer collects canisters to recycle the plastic. MSDS for this toner could not be located in the MSDS binder that is maintained on site. Facility employees were previously trained by the former office manager and new office manager will be responsible for continued training in the future. [Truncated]

File Location: All Files are on GeoTracker or in the Local Agency Database  
Local Case Number: 06S3W12E01f  
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil  
Potential Contaminants of Concern: Gasoline  
Site History: 1983 In January, eight monitoring wells (MW-1 through MW-8) were installed to approximately 30 feet below grade. No soil samples were collected from the well borings. No groundwater monitoring data has been reported for monitoring wells MW-1 through MW-8 from January 1983 until February 1990. 1987 In January, one 550 gallon waste oil underground storage tank (UST) was removed and replaced with one 550 gallon double walled waste oil tank. 16 cubic yards of TPH-impacted soil was transported by Crosby & Overton to Chemical Waste Management facility in Kettlemen Hills for disposal. Three soil samples were collected from the UST excavation. TPH as oil and grease were detected at concentrations of 806 mg/kg and 8 mg/kg in samples collected from 6.5 feet bgs and 13 feet bgs, respectively. 1990 In April, seven inches of separate phase hydrocarbon was discovered in MW-8, located next to the dispenser islands. 1991 In July, six borings were drilled onsite and converted to monitoring wells (MW-9 and MW-10), and four monitoring wells (MW-11- through MW-14) were installed offsite. Vadose wells V-1 and V-2 were installed onsite and well MW-3 was reconstructed for aquifer testing. 1.75 gallons of separate phase hydrocarbons (SPH) was bailed out of MW-6 and MW-8. 1992 In May, a groundwater extraction (GWE) program was initiated. The GWE program consisted of pneumatic fluid pumps and extraction wells E- 1 through E- 4. Extracted water was treated by carbon absorption prior to discharge to the sanitary sewer. The GWE system was shut down in March 1996 and restarted December 1998 to control migration of impacted groundwater. GWE operation was discontinued in August 2007. The GWE system extracted 3.64 million gallons of groundwater and removed 55 pounds of petroleum hydrocarbons as gasoline, 2.82 pounds of benzene and 20 pounds of MTBE. In June, a soil vapor extraction (SVE) system started operation at the site. The vacuum blowers were connected to wells and MW-1, MW-4, MW-8, V-1, V-2, and E-4. The vapors were discharged directly to the atmosphere. The SVE system operated through October 1995. 1994 In April, one offsite monitoring well (MW-15) was installed to a depth of 35 feet below grade, converted monitoring well MW-5 to extraction well E- 4, and drilled soil boring B-7 to approximately 35 feet below grade. 1998 In March and June, elevated concentrations of MTBE (47,000 ug/L to 280,000 ug/L) were detected in onsite groundwater monitoring and extraction wells. 1999-2000 From August 1999 to March 2000, 16 borings were drilled (GP-1 through GP-16), and one groundwater monitoring well (MM-9d) was installed to 48 feet below grade (fbg). The soil borings were advanced to depths of between 36 fbg and 44 fbg, and depth discrete groundwater samples were collected from two water bearing zones. 2001 In October, a CAP was submitted recommending continuing and expanding GWE and implementing short-term SVE. A water well survey was conducted and found 31 active and abandoned groundwater monitoring wells within and 1/4 mile radius of the site. Only one well owned by the City of Palo Alto is an active water supply well and is 850 feet deep. 2003 In February, a groundwater extraction well pair (E-6 and E-6B) were installed. Four soil borings GP-17 through GP-21 were drilled off-site. The borings

where advanced to depths of 23 to 27 feet below grade and depth-discrete groundwater samples were collected from the two water bearing zones. 2005 In February, four shallow soil samples (D-1 through D-4) were collected beneath each of the four former product dispensers during station upgrades. The analytical results of soil samples are summarized in Attachment 3. In April, 23.45 tons of soil was excavated from the dispenser islands and off-hauled to Kettleman Hills disposal facility. In addition, 15.1 tons of pea gravel was off-hauled to Forward Landfill in Manteca, California. 2006 In June, one 550 gallon dual wall fiberglass waste oil UST was removed one soil sample was collected at 12 feet below grade from the bottom of the UST excavation. 2007 Eight monitoring wells and five extraction wells were removed from the site groundwater monitoring program. 2007-2013 Quarterly or semi-annual groundwater monitoring was performed.

The site has single walled tanks and single walled pressurized piping. Piping is exempt form containment per HSC252929(e)(2) as it was installed in 1982, is manufactured of fiberglass and is equipped with a ELLD that is programmed to continually test for a leak of 0.2 gph. The site is also an e-site, so all sensors were tested for tamper, low water, high water, fuel and communication alarms. Each alarm provides positive shutdown of the turbine. The following sensor locations were tested: 87A STP, TLM and fill sumps; 87B STP, TLM and fill sumps; 91 STP, TLM and fill sumps; and UDC at dispensers 1/2, 3/4, 5/6, and 7/8.                                   discovered during the removal of three 10,000 underground storage  
                                  tanks at the above referenced site. Soil samples collected from  
                                  beneath the tanks and surrounding areas reported low levels of  
                                  petroleum hydrocarbons. A limited soil excavation was performed to  
                                  remove impacted soil. Confirmation soil sampling after excavation did  
                                  not report contaminant concentrations above the laboratory detection  
                                  limits. Based on the information provided, the DEH has determined  
                                  that the reported contamination does not warrant additional

                                  that any additional or previously unidentified contamination at this

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil  
 Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Diesel, Polynuclear aromatic hydrocarbons (PAHs)  
 Site History: The site is located upgradient from the California-Olive-Emerson (COE) Superfund site. Remedial excavations removed 1,475 tons of diesel-contaminated soil inside Buildings 2 and 2A and 370 tons of trichloroethane-contaminated soil outside Building 2. Since diesel fuel includes SVOCs, we directed the Responsible Party to evaluate potential indoor air (IA) vapor intrusion that appeared to indicate IA-naphthalene levels that exceeded the May 2008 environmental screening level (ESL). After adjusting the ventilation system, the IA-naphthalene levels dropped below the ESL. During a review of all relevant technical documents that included a 1997 Phase I Environmental Site Assessment, two old spills of polychlorinated biphenyls (PCBs) were discovered. The Regional Water Board then directed the the Responsible Party to characterize and remove PCB-contaminated concrete and soil outside of Buildings 2 and 2A. The Responsible Party then removed the PCB-impacted soil and concrete and USEPA approved the removals. Since diesel fuel includes SVOCs, we directed the Responsible Party to evaluate potential IA VI that appeared to indicate low levels of IA-naphthalene levels from the subsurface. With the HVAC system adjusted for increased ventilation, IA-naphthalene levels are below our IA ESL and the occupants are protected.

ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

**HAZARDOUS AIR POLLUTANT MAJOR**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Eval Notes: Follow up inspection to oversee piping line pressure testing in response to notation of fuel in secondary piping during 2015 SB989 secondary containment testing. 91 octane and 87 octane primary product piping was tested by Affordatest, technician Zane Nimmo. Mr. Nimmo holds current ICC UST tester certification (ICC 5263322-UT, exp 6/25/15) Piping held 70 psi pressure for 30 minutes without loss. History: Per J. Sutfin of Superior Underground Tank Service, fuel has been found in the secondary piping during consecutive SB 989 tests. Site passed a line tightness test in 2012. Believe that fuel in line is residual fuel that accumulated in the secondary piping since approximately 2003, when repairs were done at UDC of dispenser 5/6. --repairs done with permit, under oversight of PAFD per Mr. Sutfin. System was recently (2/2015) tightness tested via helium leak test. Lines held 50 psi Helium for 3 hours without any loss noted at the sump penetrations or at the UDC [Truncated]

Eval Notes: I am on site, 3897 El Camino Real, Palo Alto, to follow-up on the outstanding issues from the January 10, 2017 inspection by this office. The Notice of Inspection dated 1/10/2017 from this office was reviewed with Dan Askari. John Sutfin, SUTS, was on site to make a proposal for addressing liquid found in the annular space of the 87 Octane piping. This liquid that was removed from the low point in the piping was as identified as aged fuel (dark color) that has been in the secondary containment since the time a leak was discovered in the 87 Octane piping at the #5/6 dispenser, more than 8 years ago. The piping was worked on at that time, re-installing flex connections at the UDC of dispenser #5/6. Since that time, there has been a low point in the piping just outside the STP sump at the first elbow in the product pipe run towards the dispensers. Today there is no liquid in the 87 Octane sump. All liquid in the secondary piping was removed on March 7, 2017 by SUTS. [Truncated]

Violation Description: Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.  
Violation Notes: Approximately one gallon of fuel was observed in each of fill spill buckets (87-grade and 91-grade). Additionally, approximately 0.5 gallon of fuel was observed in the vapor recovery spill bucket for the 87-grade UST system. The liquid was confirmed to be fuel by the extremely strong fuel odor that emanated from a representative sample of the fluid that was removed from each bucket prior to spill bucket testing. It is of note that the the Designated Underground Storage Tank Operator (DUSTO) Monthly Inspection Reports report the presence of "fluid" in spill buckets on the following dates: - 1/5/2016: 87-grade fill spill bucket contains fluid - 2/3/2016: Both 87-grade and 91-grade fill spill bucket contain fluid - 3/16/2016: 87-grade fill spill bucket contains fluid - 6/9/2016: 87-grade vapor bucket contains fluid - 11/9/2016: 87-grade fill spill bucket contains fluid - 12/8/2016: 87-grade fill spill bucket contains fluid Additionally, HMCD recorded the presence [Truncated]

Eval Notes: Follow up inspection to oversee piping line pressure testing in response to notation of fuel in secondary piping during 2015 SB989 secondary containment testing. 91 octane and 87 octane primary product piping was tested by Affordatest, technician Zane Nimmo. Mr. Nimmo holds current ICC UST tester certification (ICC 5263322-UT, exp 6/25/15) Piping held 70 psi pressure for 30 minutes without loss. History: Per J. Sutfin of Superior Underground Tank Service, fuel has been found in the secondary piping during consecutive SB 989 tests. Site passed a line tightness test in 2012. Believe that fuel in line is residual fuel that accumulated in the secondary piping since approximately 2003, when repairs were done at UDC of dispenser 5/6. --repairs done with permit, under oversight of PAFD per Mr. Sutfin. System was recently (2/2015) tightness tested via helium leak test. Lines held 50 psi Helium for 3 hours without any loss noted at the sump penetrations or at the UDC [Truncated]

Eval Notes: I am on site, 3897 El Camino Real, Palo Alto, to follow-up on the outstanding issues from the January 10, 2017 inspection by this office. The Notice of Inspection dated 1/10/2017 from this office was reviewed with Dan Askari. John Sutfin, SUTS, was on site to make a proposal for addressing liquid found in the annular space of the 87 Octane piping. This liquid that was removed from the low point in the piping was as identified as aged fuel (dark color) that has been in the secondary containment since the time a leak was discovered in the 87 Octane piping at the #5/6 dispenser, more than 8 years ago. The piping was worked on at that time, re-installing flex connections at the UDC of dispenser #5/6. Since that time, there has been a low point in the piping just outside the STP sump at the first elbow in the product pipe run towards the dispensers. Today there is no liquid in the 87 Octane sump. All liquid in the secondary piping was removed on March 7, 2017 by SUTS. [Truncated]

Violation Description: Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.

Violation Notes: Approximately one gallon of fuel was observed in each of fill spill buckets (87-grade and 91-grade). Additionally, approximately 0.5 gallon of fuel was observed in the vapor recovery spill bucket for the 87-grade UST system. The liquid was confirmed to be fuel by the extremely strong fuel odor that emanated from a representative sample of the fluid that was removed from each bucket prior to spill bucket testing. It is of note that the the Designated Underground Storage Tank Operator (DUSTO) Monthly Inspection Reports report the presence of "fluid" in spill buckets on the following dates: - 1/5/2016: 87-grade fill spill bucket contains fluid - 2/3/2016: Both 87-grade and 91-grade fill spill bucket contain fluid - 3/16/2016: 87-grade fill spill bucket contains fluid - 6/9/2016: 87-grade vapor bucket contains fluid - 11/9/2016: 87-grade fill spill bucket contains fluid - 12/8/2016: 87-grade fill spill bucket contains fluid Additionally, HMCD recorded the presence [Truncated]

Eval Notes: Follow up inspection to oversee piping line pressure testing in response to notation of fuel in secondary piping during 2015 SB989 secondary containment testing. 91 octane and 87 octane primary product piping was tested by Affordatest, technician Zane Nimmo. Mr. Nimmo holds current ICC UST tester certification (ICC 5263322-UT, exp 6/25/15) Piping held 70 psi pressure for 30 minutes without loss. History: Per J. Sutfin of Superior Underground Tank Service, fuel has been found in the secondary piping during consecutive SB 989 tests. Site passed a line tightness test in 2012. Believe that fuel in line is residual fuel that accumulated in the secondary piping since approximately 2003, when repairs were done at UDC of dispenser 5/6. --repairs done with permit, under oversight of PAFD per Mr. Sutfin. System was recently (2/2015) tightness tested via helium leak test. Lines held 50 psi Helium for 3 hours without any loss noted at the sump penetrations or at the UDC [Truncated]

Eval Notes: I am on site, 3897 El Camino Real, Palo Alto, to follow-up on the outstanding issues from the January 10, 2017 inspection by this office. The Notice of Inspection dated 1/10/2017 from this office was reviewed with Dan Askari. John Sutfin, SUTS, was on site to make a proposal for addressing liquid found in the annular space of the 87 Octane piping. This liquid that was removed from the low point in the piping was as identified as aged fuel (dark color) that has been in the secondary containment since the time a leak was discovered in the 87 Octane piping at the #5/6 dispenser, more than 8 years ago. The piping was worked on at that time, re-installing flex connections at the UDC of dispenser #5/6. Since that time, there has been a low point in the piping just outside the STP sump at the first elbow in the product pipe run towards the dispensers. Today there is no liquid in the 87 Octane sump. All liquid in the secondary piping was removed on March 7, 2017 by SUTS. [Truncated]

Local Case Number: 06S3W12N01f  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates  
Site History: On December 26, 2002, the Regional Water Quality Control Board (RWQCB) requested that a work plan be prepared to determine if groundwater at the site had been impacted by Methyl tert Butyl Ether (MtBE). 2003 In July, 1 boring was advanced onsite downgradient of the underground storage tanks (USTs) for the collection of a grab groundwater sample. Groundwater was encountered at approximately 22 feet below the ground surface (ft bgs) and the sample was reported to contain 140 parts per billion (ppb) MtBE. Other fuel oxygenates were not reported to be present above the laboratory reporting limits. 2005 In September, 3 monitoring wells (MW1 through MW3) were installed in the vicinity of the existing USTs. 18 soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPH) as Gasoline (TPHg), Benzene, Toluene, Ethylbenzene and Xylenes (BTEX), Ethanol, Methanol, and fuel oxygenates. Maximum concentrations were reported in the sample collected from 30 ft bgs in MW3 of 4.4 parts per million (ppm) TPHg, 0.056 ppm Toluene, and 0.013 ppm Ethylbenzene; all other constituents were not reported to be present in any samples above the laboratory reporting limits. These wells were sampled quarterly for one year. The final groundwater monitoring event was conducted in June 2006 and the samples were not reported to have concentrations of TPHg, BTEX, MtBE or other fuel oxygenates present above the laboratory reporting limits.

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003

. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Emergency equipment and spill control available at treatment area. Reviewed the following documents: Closure plan, closure cost estimate and certification of financial mechanism (exempt &lt;\$10K). Posted on CERS 3/1/13 Operating instructions Daily system operating logs noting key monitoring points such as pH and total volume treated Tank system and containment assessment. Contingency Plan and other related HW generator required documents noted in HW generator portion of this report Noted discrepancies in CERS that should be addressed: closure cost posted in forms says \$6400, but attached CCE states \$7400 Facility page marked "facility permit". Only SiNAN-wire operations remain at 2625 location. Facility uses services of Veolia to sweep lab and storage areas every two weeks for consolidation and collection of wastes being handled under satellite accumulation rules. Wastes are generated in hoods, gloveboxes, from pump motor maintenance and on desktop. Consolidation of contaminated lab debris to shared area step cans. Otherwise localized storage of waste directly at point of generation. Noted one container of D006/D010 (Cd/Se waste) still in lab, marked "empty weekly". IF EMPTY WEEKLY IS TO BE UTILIZED, A WRITTEN POLICY AND DN PROCEDURE FROM THE ENTITY THAT IS DOING THE EMPTYING MUST BE PUT IN WRITING AND MADE AVAILABLE FOR REVIEW. Eval Notes: Site utilizes SAA with consolidation of solids from step cans to drums in external WAA storage area. WAA was secured, with sufficient, maintained emergency equipment. Facility generates copper/hydroxide waste, graphite debris waste, used oil from pump maintenance, solvent (mostly IPA) and lithium waste routinely. Did excess chemical clean up in 2016, shipping various U listed expired chemistry. Reviewed manifests from 2014, 2015, 2016 Inspections of SAA areas internal done weekly with bi-weekly review and pick up for consolidation from Veolia. Bags of solid waste in glove boxes noted. Each properly marked. -- please be aware that bags attached to the graphite processing hoods/laminar areas were unlabeled, although empty on day of inspection. These bags should have labels affixed once waste is added. Noted a few step and solvent container labels that are fading. May want to replace before they become illegible. Comments: Report approved with some comments and the following additional monitoring: Based on the revised MCL for 1,2,4-trichlorobenzene (1,2,4-TCB), and the concentrations of this compound in wells W6R and W6A1, DTSC requires that wells W2, W3, and W5R be analyzed for 1,2,4-TCB during the next groundwater monitoring event.

Completed Document Type: 5 Year Review Reports  
Completed Date: 06/18/2014  
Comments: The Report presents the results of monitoring both groundwater quality and groundwater remediation at the Site during the period January through December 2011. The Report also presents a summary and evaluation of groundwater monitoring and remediation activities that were performed between 2007 and 2011. Groundwater extraction and treatment is continuing at the Site. The concentrations of chlorinated volatile organic compounds (i.e. 1,1-DCA, TCE) are either declining or consistent with historical results, thus showing plume stability and prevention of off-site migration.

Comments: Report approved with some comments and the following additional monitoring: Based on the revised MCL for 1,2,4-trichlorobenzene (1,2,4-TCB), and the concentrations of this compound in wells W6R and W6A1, DTSC requires that wells W2, W3, and W5R be analyzed for 1,2,4-TCB during the next groundwater monitoring event.

Completed Document Type: 5 Year Review Reports  
Completed Date: 06/18/2014  
Comments: The Report presents the results of monitoring both groundwater quality and groundwater remediation at the Site during the period January through December 2011. The Report also presents a summary and evaluation of groundwater monitoring and remediation activities that were performed between 2007 and 2011. Groundwater extraction and treatment is continuing at the Site. The concentrations of chlorinated volatile organic compounds (i.e. 1,1-DCA, TCE) are either declining or consistent with historical results, thus showing plume stability and prevention of off-site migration.

Completed Document Type: Monitoring Report  
Completed Date: 12/06/2013  
Comments: The groundwater extraction and treatment system is in working order; the concentrations of contaminants (i.e. volatile organic compounds) are consistent with historical results. The responsible party/consultant may request a reduction of 1,4-dioxane monitoring in future, eliminating monitoring of wells that have consistently resulted in non-detection of the chemical.
