Eval Notes: EPA ID CAL000409893 issued to Hewlett Packard Enterprises Company at 3000 Hanover, Palo Alto. Activities take place at 1501 Page Mill Road, Palo Alto. Sites are contiguous. Facility is formed from split of Hewlett Packard Company. Current Hewlett Packard Enterprises Company is a RCRA SQG and non-RCRA LQG due to volumes of corrosive wastes treated onsite in an authorized Permit -By-Rule onsite treatment system. --Waste is exempt from Federal counting under 40 CFR 261.5(c)(2) since they are immediately treated in a Elementary Neutralization System. No such equivalent exemption exists in California, so waste is counted toward generator status. Records reflect that system is accepting and treating approximately 1100 gallons per month of corrosive waste/corrosive wastes commingled with non-hazardous waters. CERS ID 10078420, submitted 3/9/2016 WAA used for accumulation and consolidation of waste shared with HP Inc. All wastes are logged upon arrival, with ability to note [Truncated]

Eval Notes: System is elementary neutralization system for inorganic corrosive wastes from various research activities as well as exhaust scrub water and DI water "rejection" waste (from back pressure on Reverse Osmosis system, not from the regeneration of DI columns). Averaging approximately 1100 gallons per day throughput on system per totalizer numbers for July through Nov, 2016. Since split of HP Co, lift stations located in Building 2 areas no longer operated by HP Enterprises have been "closed" so that they no longer collect waste and send it to the treatment system. Per operator, the out of range tank is utilized monthly to ensure its integrity and operation, and the tank routinely holds some waste prior to re-introduction to treatment system during next test period. Utilizing cameras in two locations view portions of the treatment vault. All other inspections occur visually from above teh grating atop the vault. Facility is formed from split of Hewlett Packard Company. Current Hewlett Packard Enterprises Company is a RCRA SQG and non-RCRA LQG due to volumes of corrosive wastes treated onsite in an authorized Permit -By-Rule onsite treatment system. --Waste is exempt from Federal counting under 40 CFR 261.5(c)(2) since they are immediately treated in a Elementary Neutralization System. No such equivalent exemption exists in California, so waste is counted toward generator status. Records reflect that system is accepting and treating approximately 1100 gallons per month of corrosive waste/corrosive wastes commingled with non-hazardous waters. Averaging approximately 1100 gallons per day throughput on system per totalizer numbers for July through Nov, 2016. Since split of HP Co, lift stations located in Building 2 areas no longer operated by HP Enterprises have been "closed" so that they no longer collect waste and send it to the treatment system. Per operator, the out of range tank is utilized monthly to ensure its integrity and operation, and the tank routinely holds some waste prior to re-introduction to treatment system during next test period. Utilizing cameras in two locations view portions of the treatment vault. All other inspections occur visually from above the grating atop the vault. Inspected system which includes receiving tank (T1), chemical injection tank (12% sodium hypochlorite), two carbon slurry extraction vessels and a holding tank prior to discharge. --discharge is to landscaping if possible, if not can be discharged to storm system under NPDEDS Carbon slurry is removed approximately every 12 months. Empty containers for chem delivery are returned to vendor. One drum noted onsite. System is operated by Stantec as contractor for HP. Have specific site emergency plan/health and safety management plan. Reviewed training documentation for Wendy Chen, including HAZWOPER Refresher (last 2/2015), DOT, first aid, respiratory fitness program fit [Truncated]

Discussed compaction and need to ensure that no free liquids are released during compaction. Generally utilizing satellite accumulation in laboratories with consolidation at WAA/90-day area. Majority of waste, by tonnage, generated from remedial/remodel actions such as asbestos or lead paint. Generally generate at least 1 kg of P listed waste annually (since 2010). Items are from routine lab clean outs. Noted bag of emergency exit signs containing radioactive sources in the WAA. Waste noted as NOT being mixed waste. Eval Notes: EPA ID CAL000409893 issued to Hewlett Packard Enterprises Company at 3000 Hanover, Palo Alto. Activities take place at 1501 Page Mill Road, Palo Alto. Sites are contiguous. Facility is formed from split of Hewlett Packard Company. Current Hewlett Packard Enterprises Company is a RCRA SQG and non-RCRA LQG due to volumes of corrosive wastes treated onsite in an authorized Permit -By-Rule onsite treatment system. --Waste is exempt from Federal counting under 40 CFR 261.5(c)(2) since they are immediately treated in a Elementary Neutralization System. No such equivalent exemption exists in California, so waste is counted toward generator status. Records reflect that system is accepting and treating approximately 1100 gallons per month of corrosive waste/corrosive wastes commingled with non-hazardous waters. Eval Notes: System is elementary neutralization system for inorganic corrosive wastes from various research activities as well as exhaust scrub water and DI water "rejection" waste (from back pressure on Reverse Osmosis system, not from the regeneration of DI columns). Averaging approximately 1100 gallons per day throughput on system per totalizer numbers for July through Nov, 2016. Since split of HP Co, lift stations located in Building 2 areas no longer operated by HP Enterprises have been "closed" so that they no longer collect waste and send it to the treatment system. Per operator, the out of range tank is utilized monthly to ensure its integrity and operation, and the tank routinely holds some waste prior to re-introduction to treatment system during next test period. Utilizing cameras in two locations view portions of the treatment vault. All other inspections occur visually from above teh grating atop the vault. Averaging approximately 1100 gallons per day throughput on system per totalizer numbers for July through Nov, 2016. Since split of HP Co, lift stations located in Building 2 areas no longer operated by HP Enterprises have been "closed" so that they no longer collect waste and send it to the treatment system. Per operator, the out of range tank is utilized monthly to ensure its integrity and operation, and the tank routinely holds some waste prior to re-introduction to treatment system during next test period. Utilizing cameras in two locations view portions of the treatment vault. All other inspections occur visually from above the grating atop the vault. Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain

**CA BOND EXP. PLAN:**

Responsible Party:	RWQCB REFERRAL SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Hewlett Packard, the responsible party, has assumed responsibility for cleanup activities under the direction of the RWQCB. The RWQCB will continue to have lead responsibility for monitoring Hewlett Packard's progress under an existing South Bay Enforcement Agreement between the RWQCB, EPA and DHS. The RWQCB is conducting the work with support from the EPA through a Cooperative Agreement. Until such time as the RWQCB refers the site for follow-up using Bond funds, no money will be budgeted from the fund for this site. The DHS regional facilities permitting unit is maintaining liaison with RWQCB and EPA.
Site Description:	Two divisions of this corporation share the facility's 50 acre site: Stanford Park Division, principally a plating and chemical millings shop, and the Hewlett-Packard Laboratories, a research and development branch for microelectronic components. The surrounding land use is both industrial and commercial. Several underground storage tanks existed at the site from 1965 to 1983. These tanks stored chemical products and wastes.
Hazardous Waste Desc:	In 1981 Chlorinated and aromatic solvents were discovered in soil and ground water. The following chemicals have been detected in soil and ground water: Freon, benzene, toluene, dichloroethane (DCA), trichloroethylene (TCE), ethylbenzene, methylcyclohexane and methylene chloride.
Threat To Public Health & Env:	About 56,000 people live within a 3 mile radius of the facility and depend on ground water as a standby source of drinking water. To date, no contamination of nearby wells has been detected. The closest well to the site is the Matadero well located near the southeast corner of Matadero Creek and Whitsell Street, a distance of 4,530 feet from contaminated monitoring wells.
Site Activity Status:	As an initial remedial measure, leaking tanks and contaminated soil have been removed.

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil  
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Acetone, Benzene, Other Solvent or Non-Petroleum Hydrocarbon, \* \* ETHYLENE DIBROMIDE (EDB), Trichloroethylene (TCE), Xylene

Site History: Site remedy included remedial excavation, soil vapor extraction and groundwater extraction and treatment (GWET) and currently consists of GWET in selected areas. Following the current high resolution characterization of persistently elevated chlorinated volatile organic compounds (CVOCs) in groundwater, an enhanced in situ bioremediation (EISB) pilot study has been initiated as explained further below. Initial indoor air monitoring - prompted by property lease transfer - revealed presence of CVOCs in indoor air exceeding RB2 ESLs with TCE detected up to 31 ug/m3. Vapor intrusion was addressed through installation of a Sub-Slab Depressurization System in Bldg 6 and on-going monitoring through continued quarterly monitoring in Bldg 6 and semi-annual monitoring of Buildings 4 and 5. Indoor air levels have since decreased substantially to acceptable levels below indoor air screening levels. Prior questions of residual soil contamination were highlighted by indoor air vapor intrusion issues and prompted investigations to determine the source of soil vapors at least near Building 6. So as part of the Five Year Review process, the Regional Water Board directed HP to investigate persistently elevated groundwater-CVOC areas. HP completed investigating those areas using high resolution technology and is

 Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.  
 Violation Notes: Returned to compliance on 12/13/2016. Art indicated that excess glazes are rinsed to drain and captured in clay trap under sink. MSDS for products indicate that glazes may contain 0-3% zinc in form of zinc oxide. This is up to 30,000 mg/l zinc, and the regulatory level is 5,000 (or 0.5%). In science prep room noted various flammable liquids, containers such as "ammonia with BTB", agarose, sulfuric acid and glass cleaning solutions (assumed to be caustic) with no waste container in area.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

CA BOND EXP. PLAN:

Responsible Party:                    RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN

Project Revenue Source Company:    Not reported

Project Revenue Source Addr:        Not reported

Project Revenue Source City,St,Zip: Not reported

Project Revenue Source Desc:        DHS will be issuing a RAO or entering into an enforceable agreement with the RPs. DHS has budgeted \$50,000 for oversight/monitoring of cleanup activities. DHS will recover 100 percent of its direct costs plus staff costs and overhead related to the project. The RPs will pay all costs associated with remedial investigation and cleanup activities.

Site Description:                        Watkins Johnson operated a plant for the design, development and manufacturing of solid state microwave components and subsystems and traveling wave tubes at this site since 1958. Ground water monitoring after the removal of an underground tank in 1982 indicated ground water contamination. Further investigation suggested a source upgradient of the site. The facility is located within the Hillview Porter Region and may be a contributor to that plume.

Hazardous Waste Desc:                Chemicals detected in onsite soils include chloroform at 2 parts per billion (ppb) and toluene at 16 ppb. Chemicals detected in ground water include trichloroethene (TCE) at 9000 ppb, freon at 850 ppb, 1,1,1-trichloroethane (TCA) at 550 ppb, 1,2-dichloroethene (DCE) at 150 ppb, perchloroethene (PCE) at 66 ppb, 1,1-dichloroethane (DCA) at 17 ppb, and 1,1-2 trichloroethane at 110 ppb.

Threat To Public Health & Env:        Matadero Creek flows across the property in a concrete culvert and then flows along a portion of the western boundary of the site. Samples from the creek have exhibited a maximum concentration of 18 ppb of TCE. Two backup municipal supply wells are located within one mile of the site. Inhabitants of the residential area downgradient from the site are potential receptors for exposure to contaminants in ground water and surface water.

Site Activity Status:                    No further site characterization has been conducted since 1984. Watkins Johnson has submitted analytical results of quarterly water sampling and water level data to DHS for review. After evaluation of new information at adjacent sites, DHS has determined that further investigation at Watkins Johnson is required. The site will be included in the Hillview Porter regional RI/FS and the regional community relations plan.

Completed Date: 04/28/2014  
Comments: The Work Notice was mailed to individuals on the site mailing list to provide notification of field work that was to begin on May 5, 2014. The field work is associated with a pilot study of enhanced in situ bioremediation that involves injection of emulsified vegetable oil into existing wells on the site to enhance the biodegradation of volatile organic compounds in groundwater.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Pilot/Treatability Study Report  
Completed Date: 05/26/2016  
Comments: The report documents the results of enhanced in situ bioremediation injections performed at the Site in May 2014 in accordance with the Enhanced In Situ Bioremediation Work Plan approved by DTSC on March 20, 2014. The injections effectively reduced TCE and associated daughter product concentrations. The report also proposes additional injections at the Site. DTSC approved the report with the condition that an independent monitoring program (i.e. Hydropunch sampling) be performed to determine the effectiveness of the additional injections. Not reported

Completed Document Type: Work Notice  
Completed Date: 04/28/2014  
Comments: The Work Notice was mailed to individuals on the site mailing list to provide notification of field work that was to begin on May 5, 2014. The field work is associated with a pilot study of enhanced in situ bioremediation that involves injection of emulsified vegetable oil into existing wells on the site to enhance the biodegradation of volatile organic compounds in groundwater.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Pilot/Treatability Study Report  
Completed Date: 05/26/2016  
Comments: The report documents the results of enhanced in situ bioremediation injections performed at the Site in May 2014 in accordance with the Enhanced In Situ Bioremediation Work Plan approved by DTSC on March 20, 2014. The injections effectively reduced TCE and associated daughter product concentrations. The report also proposes additional injections at the Site. DTSC approved the report with the condition that an independent monitoring program (i.e. Hydropunch sampling) be performed to determine the effectiveness of the additional injections.

permanganate in-situ injections. Groundwater concentrations are stable, although groundwater monitoring is to continue to observe if rebound will occur. DTSC approved the report with the following comments: transitioning to monitored natural attenuation may require additional supporting data before DTSC will accept it as a remedy for the site; sampling of the lower zones to ensure no migration of permanganate injectant and hexavalent chromim; soil gas sampling may be required if future construction projects on-site include construction of buildings above locations of local plumes.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Eval Notes: Annual monitoring certification was performed by service technician Mike Stromecki. All of his certifications were reviewed and were current. The monitoring panel indicated "All Functions Normal" at the beginning of the inspection. Alarm history and system set-up reports were reviewed. Certification was performed on a suction system with 2 double-walled tanks (2500 gallon diesel and 4000 gallon unleaded), 2 double-walled piping runs, with one dispenser containing UDC. 2 tank annular sensors provided audible & visual alarms at the TLS-350 monitoring control panel. 2 piping/fill sump sensors provided audible and visual alarms. Service technician properly tagged the monitoring system components. Two float & chain assemblies in the UDC properly tripped the shear valve when tested with water. Overfill prevention is provided by two mechanical fill limiters positioned in two drop tubes. 2 spill buckets passed their one-hour lake tests. CERS submittal [Truncated]

Environmental Interest/Information System  
US National Pollutant Discharge Elimination System (NPDES) module of  
the Compliance Information System (ICIS) tracks surface water permits  
issued under the Clean Water Act. Under NPDES, all facilities that  
discharge pollutants from any point source into waters of the United  
States are required to obtain a permit. The permit will likely contain  
limits on what can be discharged, impose monitoring and reporting  
requirements, and include other provisions to ensure that the  
discharge does not adversely affect water quality.

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Project Revenue Source Addr: Not reported  
 Project Revenue Source City,St,Zip: Not reported  
 Project Revenue Source Desc: The Department has identified several responsible parties (RPs) and is continuously identifying more. If RPs refuse to conduct regional investigations, Bond funds will be used to investigate and remediate the site. DHS will pursue appropriate cost recovery activities.

Site Description: Located in a research park, this regional site contains at least seven separate sources of ground water contamination and there are several additional possible sources. The site lies mostly within the Stanford Research Park, adjacent to the Veteran's Administration Hospital and the Barron Park neighborhood.

Hazardous Waste Desc: Ground water maximum concentrations are as follows: trichloroethene (TCE) 9,600 parts per billion (ppb); perchloroethene (PCE) 27,000 ppb; 1-1-dichloroethene (1,1-DCE) 800 ppb; 1,1,1-trichloroethene (1,1,1-TCA) 450 ppb; perchloroethane (PCA) 1,100,000 ppb; toluene 17,000 ppb; and xylene 420 ppb.

Threat To Public Health & Env: Seven private wells are located in a residential area downgradient from the site. One municipal well is within 1 mile and three are within 1.5 miles of the site. Matadero Creek runs adjacent to the Hillview-Porter site and surface water samples have exhibited a maximum value of 18 ppb TCE. Residents of the residential area downgradient from the site are potential receptors for exposure to the ground water/surface water contaminants.

Site Activity Status: The Department has issued a draft regional RI/FS work plan to interested parties to comment on. A draft regional RAO has been prepared and distributed; a final RAO should be issued to RPs by December, 1988. The Department is also continuing to work on a site-specific basis with individual RPs and is continuing to investigate and discover additional RPs within the Hillview Porter region. As those additional RPs are identified, their names will be

Groundwater is extracted from two 750-foot long horizontal extraction wells and 15 vertical extraction wells and is treated using activated carbon at a treatment system located at 3215 Porter Drive. Treated water is discharged to Matadero Creek under an NPDES permit. Three additional wells discharge extracted water directly to the sanitary sewer under a permit from the Palo Alto Regional Water Quality Control Plant.

Comments: The Groundwater Remediation Facility Work Plan describes a plan and work scope to consolidate groundwater extraction and treatment systems for the Hewlett-Packard Building 15 Site and the Hillview Porter Plume site. Both systems are on the 3215 Porter Drive parcel; due to future redevelopment plans, both systems will be consolidated to operate out of the existing Hillview Porter Plume treatment system. Water extracted at the different sites will be piped to the future consolidated treatment system and metered separately, before the streams are combined for treatment. Some extraction and monitoring wells on the Hewlett-Packard Building 15 site will need to be destroyed at the surface and paved over, to preserve the wells during redevelopment construction; the well heads will be restored upon construction completion. Replacement extraction wells will be installed at the site boundary for operation during redevelopment construction. DTSC approved the Work Plan with comments and clarifications.

Comments: Completed Remedial Action. The final remedial action for the Hillview Porter Regional Plume consisted of installation and operation of a groundwater extraction and treatment system. Groundwater is extracted from two 750-foot long horizontal extraction wells and 15 vertical extraction wells and is treated using activated carbon at a treatment system located at 3215 Porter Drive. Treated water is discharged to Matadero Creek under an NPDES permit. Three additional wells discharge extracted water directly to the sanitary sewer under a permit from the Palo Alto Regional Water Quality Control Plant.

Comments: The Groundwater Remediation Facility Work Plan describes a plan and work scope to consolidate groundwater extraction and treatment systems for the Hewlett-Packard Building 15 Site and the Hillview Porter Plume site. Both systems are on the 3215 Porter Drive parcel; due to future redevelopment plans, both systems will be consolidated to operate out of the existing Hillview Porter Plume treatment system. Water extracted at the different sites will be piped to the future consolidated treatment system and metered separately, before the streams are combined for treatment. Some extraction and monitoring wells on the Hewlett-Packard Building 15 site will need to be destroyed at the surface and paved over, to preserve the wells during redevelopment construction; the well heads will be restored upon construction completion. Replacement extraction wells will be installed at the site boundary for operation during redevelopment construction. DTSC approved the Work Plan with comments and clarifications.

Background Info: The Hillview Porter site is a regional problem of commingled groundwater and surface water contamination. The site boundaries encompass several sources of contamination within about 320 acres of the Stanford Research Park (SRP). The Hillview Porter region is divided into the "site" and "area of investigation." The "site" is comprised of nine separate sites within the SRP which represents the source areas of groundwater contamination within the SRP. Commingled plumes migrating from the sites have impacted groundwater beneath the "area of investigation" (comprised of the adjoining Barron Park neighborhood, Veterans Administration, Matadero Creek). Groundwater flow from the site follows the direction of Matadero Creek towards Barron Park. Since the late 1950's, SRP has been occupied primarily by companies conducting electronics research and manufacturing operations. Many current and historic tenants used volatile organic chemicals (VOCs) in their operations. The site was referred to the Department by the Regional Water Control Board in November 1985, as the sources of groundwater contamination in the region were unknown. The Department conducted a preliminary assessment, a regional soil gas survey, sampled Matadero Creek and private wells within the Barron Park,

conducted an extensive potential responsible party search, and began overseeing site-specific investigations at facilities which were potential sources of contamination. DTSC also oversees remedial actions at the nine facilities identified as source areas for the regional problem. Contaminants found in the region are primarily chlorinated VOCs such as trichloroethene (TCE), perchloroethene (PCE), 1,1,1, -trichloroethane (1,1,1-TCA), and freon. These chemicals have been found in monitoring wells within SRP at depths up to about 100 feet. They have also been detected in Matadero Creek and/or several private wells in Barron Park. Currently, the Department is continuing to separately oversee remedial actions at the nine facilities identified as source areas for the regional problem. Specific details on each site can be found in the specific profile report as identified below. The nine facilities are: Teledyne-Singer, 3176 Porter Drive; Lockheed Building 255, 3170 Porter Drive; Hewlett Packard Building 15, 3215 Porter Drive; Hewlett Packard Buildings 28A, B and C, corner of Page Mill Road and Porter Drive; Teledyne MEC, 3165 Porter Drive; Coherent, Inc., 3210 Porter Drive; Watkins Johnson, 3333 Hillview Avenue; Syntex, 3300 Hillview Avenue; and Smith- Kline & French Laboratories, 3400 Hillview Avenue. Groundwater and surface water sampling and water level measurements are collected simultaneously by RPs for the site-specific and regional investigations. DTSC will continue to review periodic performance evaluation reports for the groundwater extraction and treatment system.

Eval Notes:	The quantity of battery electrolyte is less than the 55 gallon State Hazardous Materials Business Plan (HMBP) reporting threshold, but the site is still regulated as a Minimal Storage Site subject to the local Hazardous Materials Storage Ordinance (HMSO). Facility Information; Hazardous Materials Inventory; Site Map; and Aboveground Separation, Containment, and Monitoring Plan electronically submitted via the California Environmental Reporting System (CERS) website on 9/20/2017 have been reviewed and Accepted. Notes: 1. Site currently has 20 x Marathon model M12V155FT batteries totaling 43.4 gallons of battery electrolyte. 2. The CERS reporting requirement for the Emergency Response and Training Plans submittal element should remain "Not Applicable" since this is not a HMBP facility. 3. AT&T site is collocated with a Crown Castle site that has an additional 8 x Marathon model M12V155FT batteries.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMs by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## **EDR HIGH RISK HISTORICAL RECORDS**

### ***EDR Exclusive Records***

#### **EDR MGP: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.
