subject Palo Alto Highway 101 Bicycle and Pedestrian Overcrossing Project - Hazardous Materials Assessment

Introduction

This memo summarizes recent hazardous materials investigations in the vicinity of the proposed Palo Alto Highway 101 Bicycle/Pedestrian Overcrossing at Adobe Creek (“POC Project”). The Proposed POC Project would be located between San Antonio Road and Oregon Expressway, where Highway 101 crosses Adobe Creek (**Figure 1**). The project would link communities and businesses on the highway’s west side, with the Baylands Nature Preserve, businesses, and communities to the highway’s east. Because project construction may involve handling of soils and groundwater, this assessment of the potential for hazardous materials to be present in the soil or groundwater within or near the project area was conducted.

Studies of site conditions within the POC Project area were recently completed for the ongoing Highway 101 Auxiliary Lanes Project (“Auxiliary Lanes Project”), which intersects the POC Project site at Adobe Creek (**Figure 2**). Accordingly, technical studies developed in support of the Auxiliary Lanes Project are of direct relevance to the POC Project, as the project area for the Auxiliary Lanes Project generally encompasses the POC Project site. These studies, discussed further below, provide an assessment of surface and subsurface conditions at the POC Project site:

- Baseline Consultants, *Initial Site Assessment for the U.S. 101 Auxiliary Lanes Project (Embarcadero to Shoreline Boulevard)*, April 2, 2008;
- URS Corporation, *Site Investigation Report for the Highway 101 Auxiliary Lanes Project*, May 19, 2010.

In addition, ESA obtained an updated regulatory agency database search report (EDR 2013) to identify any changes that may have occurred in the project area since the release of these reports. A summary of the reports follows. Copies of the reports are included in Appendices A, B, and C, respectively.

Summary of Previous Investigations

Initial Site Assessment

The Initial Site Assessment (Baseline 2008) examines the potential for hazardous materials to occur along a stretch of U.S. 101, from Embarcadero Road in Mountain View south to Shoreline Boulevard in Palo Alto. The study considers all properties within one-eighth mile of the project area. The POC Project site falls entirely within the Auxiliary Lanes Project study area. The ISA included a review of: (1) previous environmental investigations at or near the project area; (2) historical land use information (e.g., historic topographical maps, aerial photographs, and city directory information); (3) site reconnaissance; and (4) review of federal, state, and local regulatory agency files and databases. The ISA was prepared in accordance with the California Department of Transportation (Caltrans) Project Development Procedures Manual (Baseline 2008).

The ISA's historic land use analysis indicates the POC Project site remained relatively undeveloped until the late 1950s or early 1960s. Site reconnaissance of the Auxiliary Lanes Project area reveals no evidence of hazardous materials use, storage, generation, release, or disposal within one-half mile of the POC Project area. However, the ISA does reference a 2000 Aerially-Deposited Lead Investigation (Kleinfelder 2002) that found the upper one foot of soils near the freeway shoulder contain soluble lead concentrations that would be considered a California hazardous waste.

The regulatory agency database review reveals that, within 1/8 mile of the POC Project area, two sites (WVP Income Plus II and an unidentified owner at 1201 San Antonio Road) listed on the State's SLIC database; one site (Microfab Systems) on the State's Cortese database; and three sites (Ford Aerospace, Space Systems/Loral, and Campus for Jewish Life) on the State's Envirostor database. Five of the sites are located south of U.S. 101 and two (the SLIC sites) to the north. The ISA identifies petroleum hydrocarbons and chlorinated VOCs as the primary constituents of concern among these sites. The document notes that the Space Systems/Loral Site is under cleanup order for VOCs, and that the order also addresses the CJL and another adjacent property (Baseline 2008).

The ISA includes recommendations for three areas of further study, prior to project development. First, the report recommends a soil investigation to determine whether aerially deposited lead or VOCs have affected soils that would be excavated as part of the project. Second, the ISA recommends a groundwater investigation to determine whether groundwater has been affected by VOCs. And finally, the ISA calls for a survey of existing wells to determine the need for closure or abandonment.

Site Investigation Report

The Site Investigation Report (URS, 2010) examines soil and groundwater conditions in the general project vicinity, but primarily within the Caltrans rights-of-way (ROW) adjacent to north- and southbound traffic lanes. The investigation includes four sampling location in the immediate vicinity of the POC Project site. The sampling procedures and report preparation were carried out in coordination with Caltrans staff and in accordance with its protocols.

The primary focus of the soils analysis is on aerially-deposited lead. Soil sampling locations within or immediately adjacent to the POC Project area include those within the ROW on the north side of the highway, identified as sampling sites N-1-17 and -18; and those within the ROW on the south side of the highway, identified as sampling locations S-1-17 and -18. Groundwater sampling was also performed at sampling location S-1-18-GW. Sampling locations are depicted in **Figure 2**.

Highway 101 Auxiliary Lane Project Limits

Highway 101 Auxiliary Lane Soil Sample Locations

Highway 101 Overcrossing at Adobe Creek Soil Sampling - Hwy 101 Aux Project

Five soil samples were collected at each of the sampling locations, at depths ranging from 0-0.5 feet to 2.5-3.0 feet below ground surface (bgs). One groundwater sample was collected at the south sampling location (S-1-18-GW). The sample was collected at the depth of first groundwater encountered, estimated at between 8 and 15 feet bgs (URS 2010). **Table 1a** compares the maximum concentration of lead identified in the soil samples from to the federal, state, and regional hazardous waste criteria, including the (a) federal Toxicity Characteristic Leaching Procedure (TCLP) regulatory level, (b) the state total threshold limit concentration (TTLC) and soluble threshold limit concentration (STLC), and (c) the San Francisco Bay RWQCB Environmental Screening Levels for construction workers¹.

Where concentrations exceeded ten times the Soluble Threshold Concentration (STLC), a sample was extracted with the Standard Water Waste Extraction Test (WET) and the De-ionized Water Waste Extraction Test (DI-WET). The former was used to determine whether the material would be considered hazardous waste under California criteria, and the latter was used to evaluate the suitability of soils for onsite reuse. Where lead concentrations exceeded 20 times the STLC, a sample was extracted using the (federal) Toxicity Characteristic Leaching Procedure (TCLP) to determine whether the material would be considered hazardous waste under federal criteria.

The DTSC Variance obtained by Caltrans (Variance No. V09HQSCD006) provides for the reuse of lead-contaminated soils within the Caltrans ROW, subject to terms identified therein, but generally provided that (1) the soil contains less than 3397 mg/kg total lead and 150 mg/L extractable lead or less (based on the DI-WET test); (2) the soil would be reused within the Caltrans ROW; (3) the soil would be covered with a minimum thickness of one foot of non-hazardous soil or asphalt/concrete cover; and (4) will always be at least five feet above the highest groundwater elevation; and (5) soil with >5mg/L extractable lead with TCLP cannot be reused and must be disposed offsite as a Resource Conservation and Recovery Act (RCRA) federal hazardous waste. A copy of the variance is included as SIR Appendix D.

As shown in Table 1a, analysis of the soil samples revealed highest concentrations of lead generally occurring at depths of 0 – 1.5 feet. Within the POC Project area, reuse of the top one and a half feet of soil adjacent to the north- and southbound lanes may be permissible within the Caltrans ROW, based on the Caltrans variance, provided that the following conditions are met: soil would be more than 5 feet above the water table and be covered with at least one foot of clean soil or a pavement structure that will be maintained by Caltrans. Additional testing would be required for the top 0.5 feet of soil adjacent to the northbound lane due to TCLP concentrations in excess of 5.0 mg/L. If not reused onsite, soil excavated from this area (down to 1.5 feet bgs in some areas) must be disposed as a California or federal hazardous waste, as appropriate, or disposed out-of-state. Due to lower lead concentrations in soils deeper than 1.5 feet bgs, reuse of soils excavated from these areas would not be restricted.

Groundwater samples were analyzed for CAM-17 metals and other constituents of potential concern. CAM-17 metals include antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium and zinc. Other constituents include pH, Organochlorine Pesticides (OCPs), Volatile Organic Compounds (VOCs), Polychlorinated Biphenyls (PCBs), Total Petroleum Hydrocarbon as gasoline (TPH-g), Total Petroleum Hydrocarbon as diesel or motor oil (TPH-d/mo). A summary of threshold criteria, constituents screened, and quantities encountered is provided in **Table 1b**.

¹ Federal (RCRA-TCLP) and State (Title 22 – STLC,TTLC) hazardous waste criteria for lead are as follows: TCLP = 5.0 mg/L; STLC = 5mg/L; TTLC= 1,000 mg/kg

As shown in Table 1b, no metals or other constituents of concern exceeded hazardous waste thresholds. The SIR indicates that groundwater analysis did not reveal the presence of contamination that would require disposal as a hazardous waste (URS 2010). The SIR includes recommendations for work involving soil and groundwater exposure and handling. The recommendations are as follows:

- Caltrans should review and approve the soil disposal location prior to granting approval for soil movement.
- If soils of unusual color or odorous soils are encountered during the project excavations or soil management activities, those soils should be stockpiled separately and subjected to additional sampling and analysis to further evaluate potential contamination.
- Excavated material used for backfill must be placed at least 5 feet above the groundwater table. The lead-impacted soil may be reused as a component of lime-treated subbase. The depth to groundwater varies from approximately 8 to 15 feet.
- A site-specific health and safety plan should be prepared to protect workers and the public from exposure risks due to lead. This health and safety plan will likely require workers to receive HAZWOPER 24 or 40 hour training prior to beginning field work. The health and safety plan should consider concentrations of all detected constituents, and in particular the presence of arsenic, nickel, chromium, lead, asbestos, OCPs, and TPH-mo in soil.

Environmental Data Resources Regulatory Agency Database Search Report

To determine whether site conditions may have changed from those described in the 2008 and 2010 studies described above; in January 2013, we commissioned an environmental records search. The search, prepared by Environmental Data Resources (EDR 2013), and included as Appendix C, examines state and federal databases containing information regarding locations of known hazardous materials generation, handling, storage, and release. The records search revealed the presence of several generators and handlers of hazardous materials within the POC project vicinity. The search also identifies sites for which ongoing hazardous materials cleanup activities are planned, underway, or recently completed. However, the search did not reveal the presence of any new cases of soil or groundwater contamination within 1/8 mile of the project area.

Findings and Recommendations

Past soil and groundwater sampling analyses indicate that aerially deposited lead is the primary constituent of concern at the POC Project site. Soil sampling in the POC Project area detected lead concentrations at levels considered “hazardous waste” under California criteria at depths ranging from 0 to 1.5 feet below ground surface (bgs). Lead concentrations in deeper soil samples were below hazardous waste thresholds. With respect to groundwater, several chemical constituents were identified; however, none was detected at levels that exceed state thresholds for hazardous materials. Based on these findings, to ensure worker and environmental safety during and after construction, we recommend the development and implementation of a construction risk and spoils management plan (CRSMP). The CRSMP should include all necessary procedures to ensure that excavated materials are stored, managed, and disposed of in a manner that is protective of human health and in accordance with applicable laws and regulations. Such information should include the following:

- A site-specific health and safety plan (HASP) prepared by a qualified environmental professional in accordance with federal OSHA regulations (29 CFR 1910.120) and Cal/OSHA regulations (8 CCR 5192). The HASP should include all required measures to protect construction workers and the general public by including engineering controls, monitoring, and security measures to prevent unauthorized entry to the

construction area and to reduce hazards outside of the construction area. If prescribed contaminant exposure levels are exceeded, personal protective equipment would be required for workers in accordance with state and federal regulations.

- Step-by-step procedures for evaluation, handling, stockpiling, storage, testing, and disposal of excavated material, including criteria for: (1) reuse within the project area; (2) stockpiling within the project area; and (3) offsite disposal. All excavated materials should be inspected prior to initial stockpiling, and spoils that are visibly stained and/or have a noticeable odor should be stockpiled separately to minimize the amount of material that may require special handling. The chemical quality of the spoils intended for reuse should be characterized, and spoils should be reused onsite only if they meet the reuse criteria established in the DTSC Variance obtained by Caltrans (Variance No. V09HQSCD006). If some of the spoils do not meet the reuse criteria and/or debris is identified, these materials should be disposed of in accordance with applicable state and federal waste disposal requirements.
- Procedures to be implemented if unknown subsurface conditions or contamination are encountered, such as previously unreported tanks, wells, or contaminated soils.

Subject: Initial Site Assessment for the U.S. 101 Auxiliary Lanes Project (Embarcadero Road to Shoreline Boulevard)

Dear Mr. Hissen:

Please find enclosed our report documenting activities and findings of an Initial Site Assessment prepared for the U.S. 101 Auxiliary Lanes Project. The project proposes to construct an auxiliary lane in each direction of U.S. 101 freeway and other improvements between Embarcadero Road in the City of Palo Alto and Shoreline Boulevard in the City of Mountain View. If you have any questions or comments, please contact us at your convenience.

Sincerely,

Yane Nordhav

EXECUTIVE SUMMARY
INITIAL SITE ASSESSMENT
U.S. 101 Auxiliary Lanes Project (PM52.17/48.97)
Palo Alto and Mountain View, California

BASELINE Environmental Consulting (“BASELINE”) prepared this Initial Site Assessment (“ISA”) for the U.S. 101 Auxiliary Lanes Project (“project”) located in Santa Clara County, California. This ISA was prepared for URS Corporation in support of environmental review of the proposed project.

The purpose of this investigation was to provide information regarding hazardous materials¹ that may potentially be present in the project study area based on historical and current land uses and to provide recommendations for further action. The project study area for this report consists of the project area and properties within one-eighth mile of the project area. The scope of work for this ISA included: a review of previous environmental investigations conducted at and near the project area; a review of historical land use information, including historical topographic maps, aerial photographs, and City directory information; reconnaissance at the project area and adjacent properties; a review of Federal, State, and local regulatory agency files and databases; and the development of recommendations for further action. All ISA activities were performed in accordance with guidelines contained in the California Department of Transportation (“Caltrans”) Project Development Procedures Manual, including Appendix DD, *Preparation Guidelines for Initial Site Assessment (ISA) Checklist for Hazardous Waste*.

- Based on review of previous investigations conducted at and near the project area, the groundwater underneath the area in the vicinity of Shoreline Boulevard has been affected by known releases of volatile organic compounds (“VOCs”) from three properties adjacent to the project area. Two of the three properties were listed as Superfund sites. Based on the information reviewed, VOC-affected groundwater extends beneath the Caltrans yard located near Old Middlefield Way.
- Soil quality at the project area is likely affected by aerially-deposited lead (“ADL”), based on analytical data from previous ADL investigations conducted at and near the project area. The ADL investigations indicated that some shallow soil near the freeway would likely to be classified as a California hazardous waste based on soluble lead concentrations, but the soil may be suitable for reuse within Caltrans rights-of-way.
- Based on groundwater data available from sites near the project area, the depths to shallow groundwater across the project area range from five to eight feet below ground surface. Therefore, the reuse of ADL-affected soil may not be allowed in some areas where a minimum five-foot separation between the groundwater and lead-affected soil is

¹ The California Health and Safety Code Section 25500 define a hazardous material as “any material, that because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. Hazardous materials include, but not limited to, hazardous substances, hazardous waste, and any material that a handler or administering agency has a reasonable basis for believing that it would be injurious to the health and safety of persons or harmful to the environment if released into the workplace or the environment.” This report uses this definition of hazardous material throughout this document.

not present, based on the current variance for lead-affected soil granted by the California Department of Toxic Substances Control ("DTSC") to Caltrans.

- A previous soil investigation conducted at and near the project area detected VOCs in soil samples collected from the unsaturated zone. Therefore, construction workers could be exposed to affected soils either through direct contact or inhalation of vapors that could accumulate at confined spaces, such as trenches.
- A soil and groundwater investigation conducted at a Caltrans yard indicated VOC impacts in soil and groundwater, but did not indicate impacts from pesticides, polychlorinated biphenyls, or metals.
- The groundwater underlying the vicinity of the project area from San Antonio interchange to the Old Middlefield Way overcrossing have been affected by releases of VOCs from sites adjacent and near the project area, based on review of regulatory database report and available environmental documents from active remediation sites adjacent to the project area. The known VOC-affected groundwater underlying several adjacent properties to the project area contributes to a regional groundwater problem that appears to be present at least in the vicinity between the San Antonio Road interchange and Shoreline Boulevard within the project area.
- No evidence of hazardous materials use, storage, generation, release, and disposal was observed on the project area and adjacent properties. However, these observations do not preclude the potential for hazardous materials issues that may be present at properties within the project area and/or adjacent properties that were not visible from public rights-of-way.

Based on the findings of this investigation, BASELINE recommends:

- Prior to project development, a soil investigation should be conducted at the project area to determine whether ADL or VOCs has impacted soils that will be affected by the proposed project. The scope of the investigation should take into account previous data collected during the Highway 85/101 interchange investigation. The investigation for ADL should be performed in accordance with the Caltrans' Lead Testing Guidance Procedure. The analytical results should be compared against applicable hazardous waste criteria and the DTSC variance for lead-affected soil. Based on analytical results, the investigation should provide recommendations regarding management and disposal of affected soils in the project area including the reuse potential of VOC-affected soil during project development.
- Prior to project development, a groundwater investigation should be performed to determine whether groundwater has been affected by VOCs or other contaminants in areas where the proposed excavation is expected to encounter groundwater. In addition, groundwater elevations should be investigated if areas are proposed for fill using lead-affected soils. Under the DTSC variance for lead-affected soil, soil impacted with ADL can be reused as construction fill provided that it is placed at least five feet above maximum groundwater level. If dewatering is anticipated by the proposed project, the investigation report should provide recommendations regarding proper treatment, if necessary, and disposal or reuse of affected groundwater.

- A survey of existing wells in the immediate vicinity of the project area should be performed prior to project development. Wells that are affected by the proposed project may require abandonment and/or relocation in accordance with Federal, State, and local requirements.

INITIAL SITE ASSESSMENT
U.S. 101 Auxiliary Lanes Project (PM52.17/48.97)
Palo Alto and Mountain View, California

1. INTRODUCTION

This report presents the activities and findings of an Initial Site Assessment (“ISA”) for the U.S. 101 Auxiliary Lanes Project (“project”) located in Santa Clara County, California (Figure 1). The proposed project is one of several Bay Area projects funded by the Corridor Mobility Improvement Account program, adopted by the California Department of Transportation (“Caltrans”). BASELINE Environmental Consulting (“BASELINE”) conducted this ISA for URS Corporation in support of environmental review of the proposed project.

The purpose of this investigation was to provide information regarding hazardous materials² that may potentially be present at the project study area based on historical and current land uses and to provide recommendations for further action. The project study area for this report consists of the project area and properties within one-eighth mile of the project area.³ The scope of work for this ISA included: a review of previous environmental investigations conducted at and near the project area; a review of historical land use information, including historical topographic maps, aerial photographs, and City directory information; reconnaissance at the project area and adjacent properties; a review of Federal, State, and local regulatory agency files and databases; and the development of recommendations for further action. All ISA activities were performed in accordance with guidelines contained in the Caltrans Project Development Procedures Manual, including Appendix DD, *Preparation Guidelines for Initial Site Assessment (ISA) Checklist for Hazardous Waste*. A completed Caltrans ISA Checklist is included in Appendix A.

2. PROJECT AREA DESCRIPTION

The project area consists of a 3.2-mile segment of U.S. 101 from the Embarcadero Road interchange in the City of Palo Alto to the Shoreline Boulevard interchange in the City of Mountain View (Figure 2). The alignment of the project area extends approximately 800 feet to the west of the Embarcadero Road along U.S. 101 and terminates just before the Shoreline Boulevard overcrossing to the southeast (Figure 2). The lateral extent of the project area consists of: interchanges, including on- and off-ramps, at Embarcadero Road, Oregon Expressway, San Antonio Road, Rengstorff Avenue, and Shoreline Boulevard; frontage roads, East Bayshore Boulevard and West Bayshore Boulevard, between Oregon Expressway and San Antonio Road interchanges; and the Old Middlefield Way overcrossing (Figure 2). A fast food restaurant and a Caltrans yard are contained within the project area at the southwest corner of Rengstorff Avenue

² The California Health and Safety Code Section 25500 define a hazardous material as “any material, that because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. Hazardous materials include, but not limited to, hazardous substances, hazardous waste, and any material that a handler or administering agency has a reasonable basis for believing that it would be injurious to the health and safety of persons or harmful to the environment if released into the workplace or the environment.” This report uses this definition of hazardous material throughout this document.

³ It should be noted that databases were searched for an area within up to two miles of the proposed alignment and the data are available in Appendix F.

interchange and near the southbound on-ramp to U.S. 101 from Old Middlefield Way, respectively (Figure 2).

The vicinity of the project area is largely developed with the exception of the Palo Alto Baylands Nature Preserve (“Baylands”), located adjacent to East Bayshore Boulevard (Figure 2). The Baylands are tidal marsh lands inundated by the San Francisco Bay, which is generally to the north of the project area (Figure 1). Some of the facilities at the Baylands include: the Emily Renzel Wetlands, a portion of the regional San Francisco Bay Trail, and a sanitary landfill (Figure 2). Other surface water bodies near the project area include: San Francisquito Creek; Mayfield Slough, which is connected to Matadero Creek; Charleston Slough, which is connected to Adobe and Barron Creeks; and Mountain View Slough, which is connected to Permanente Creek (Figure 2).

The project area is underlain by several layers of unconsolidated sediments consisting of gravel, sand, silt, and clay that have been eroded from the Santa Cruz Mountains (Sloan, 2006). Layers of coarse-grained material formed by stream deposits are the primary zones that store and transmit water (Sloan, 2006). The uppermost water-bearing zone (“shallow zone”) is generally between 10 and 18 feet below ground surface (“ft bgs”) (Geomatrix, 2006; Kleinfelder, 2002a). The shallow zone is underlain by two water-bearing zones, the upper and lower intermediate zones at depths of 36 and 54 ft bgs, respectively (Kleinfelder, 2002a). Depths to groundwater measured in monitoring wells at two active remediation sites near San Antonio Road interchange typically ranged from five to eight ft bgs (Geomatrix, 2006; Brown and Caldwell, 2007). The groundwater data from the two remediation sites indicate a general groundwater flow direction towards the north (Geomatrix, 2006; Brown and Caldwell, 2007). This groundwater flow direction is consistent with the topography of the project area.

3. PROJECT DESCRIPTION

The project involves the construction of auxiliary lanes, one lane in each direction of U.S. 101, between Embarcadero Road and Shoreline Boulevard (Figure 2). The construction of auxiliary lanes would widen U.S. 101 to a ten-lane freeway and provide more room for traffic entering and exiting the freeway at each interchange. The auxiliary lanes would allow traffic that is moving from one interchange to the next to use the freeway without impacting the main through lanes. Other improvements proposed by the project include: widening and modification of on- and off-ramps at interchanges along the project alignment, widening of several bridge crossings, relocation and erection of soundwalls, erection of retaining walls, and relocation and installation of storm drain systems and utilities.

Depending on the eventual geometric configuration of the proposed project, additional rights-of-way may be required. There are eighteen parcels, located adjacent to the freeway, which are being considered as potential additional rights-of-way (Table 1). Although those parcels could potentially be affected by project activities, buildings located on those parcels, if any, are not expected to be demolished. All potential additional rights-of-way parcels are located in Mountain View, California and within the project study area (Figure 3).

4. PREVIOUS INVESTIGATIONS

This section summarizes the findings of hazardous materials investigations conducted at and near the project area in support of the Highway 85/101 Interchange Project in Mountain View, California. The Highway 85/101 Interchange Project proposed improvements at U.S. 101 from Old Middlefield Way overcrossing to Moffett Boulevard interchange (Lowney, 2000) (Figure 4). The portion of the project area from Old Middlefield overcrossing to Shoreline Boulevard interchange conforms to the northwest segment of the Highway 85/101 Interchange Project.

4.1 Initial Site Assessment and Limited Soil Evaluation

In 2000, an Initial Site Assessment and Limited Soil Evaluation (“ISA/LSE”) was conducted to document potential environmental concerns for the Highway 85/101 Interchange Project site (Lowney, 2000). The scope of the ISA/LSE included a reconnaissance at the proposed improvement site and adjacent properties; a review of available reports, maps, and aerial photographs; a review of regulatory agency database report; and collection and analysis of surface soil samples for total lead and soluble lead.

The ISA/LSE identified seven nearby sites associated with hazardous materials releases. Four of the seven sites were located adjacent to the project area. The four sites were identified as Spectra-Physics, Incorporated (“SPI”), Teledyne Semiconductors, Incorporated (“TSI”), Plymouth Street Site (“PSS”), and VTA North Coach Division (“VTA”) (Figure 4). The SPI and TSI sites were listed on the Federal National Priorities List⁴ database, while the PSS and VTA sites were listed on the California Spills, Leaks, Investigations, and Cleanup (“SLIC”) database.

The ISA/LSE indicated that the regional groundwater in the vicinity of the proposed improvement area was affected by a co-mingled plume of volatile organic compounds (“VOCs”) originating from the SPI, TSI, and PSS sites. Groundwater extraction and treatment systems were operated at each of the source areas as part of groundwater remediation efforts. The ISA/LSE stated that the concentrations of VOCs in groundwater at the PSS site tended to be higher compared to the SPI and TSI sites, since the PSS site was located downgradient from the SPI and TSI sites.

The ISA/LSE described the release at the VTA site as related to underground gasoline, diesel, and waste oil storage tanks and hydraulic lifts. In September 1997, the San Francisco Bay Regional Water Quality Control Board (“Water Board”) issued closure letters for several underground features (i.e., tanks, sumps, and lifts) formerly located at the VTA site, indicating that remediation has been completed.

As part of the limited soil evaluation, twenty soil samples were collected at three feet from the paved edge of the freeway shoulder and approximately six inches below ground surface. Of the twenty soil samples, five soil samples were within the project study area. The total lead concentrations of the five soil samples ranged from 110 to 300 milligrams per kilogram (“mg/kg”), while soluble lead concentrations ranged from below the reporting limit to 19 milligrams per liter (“mg/L”). Based on these analytical results, some of the soil at the proposed

⁴ The National Priorities List, also known as the Superfund, was established by the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended, to address abandoned hazardous waste sites.

improvement area that is within the project study area would be classified as a California hazardous waste based on soluble lead, but may be allowed for reuse under the current aerially-deposited lead ("ADL") variance granted by the California Department of Toxic Substances Control ("DTSC") to Caltrans.

In California, a waste with a total lead concentration of 1,000 mg/kg or an extractable lead concentration of 5 mg/L is considered a California hazardous waste, and must be managed and disposed of in accordance with applicable hazardous waste and health and safety regulations. However, under the ADL variance issued by the DTSC, soils containing up to 3,397 mg/kg of total lead and 50 mg/L of soluble lead may be reused within Caltrans rights-of-way provided that the lead-affected soil is placed at least five feet above maximum groundwater level, among other conditions (DTSC, 2003). The existing ADL variance is valid until June 30, 2008 (Caltrans, 2007).

4.2 Initial Site Assessment

In January 2002, an Initial Site Assessment ("ISA") was prepared for three properties which were considered for acquisition for the Highway 85/101 Interchange Project (Kleinfelder, 2002a). The 2002 ISA was conducted for the existing Caltrans yard, Santa Clara Valley Water District property; and the Foothill Recycling Center. Of the three sites, only the Caltrans yard site was located within the project area (Figures 2 and 4). The scope of the 2002 ISA included a reconnaissance at each of the subject site and adjacent properties; a review of aerial photographs, geologic maps, topographic maps; and a review of regulatory agency database files.

The 2002 ISA did not find any evidence of hazardous materials storage or releases at the Caltrans yard site. However, pesticides or herbicides could potentially be present in soil and/or groundwater since the Caltrans yard site was used for agriculture and cattle grazing through the 1950s, based on review of aerial photographs. In addition, there is a possibility for lead-affected soil to exist beneath the Caltrans yard since it was adjacent to the freeway.

The 2002 ISA cited that groundwater under the three subject sites was affected by releases of chlorinated solvents from known and unknown sources. The known sources include the SPI and TSI sites. The 2002 ISA reported that data from the SPI and TSI sites indicated that the VOCs in the shallow zone had affected the upper and lower intermediate groundwater zones. Based on available data, the VOCs in the shallow zone were estimated to extend about three-quarters of a mile from the area of the SPI and TSI sites and appeared to have affected the groundwater underneath the Caltrans yard (Figure 4).

4.3 Aerially-Deposited Lead Investigation

In July and August 2000 and February 2001, an ADL investigation was conducted in phases to gather data for evaluation of ADL in shallow soils near the freeway shoulder, soil handling and disposal options for soils proposed for export, and the reuse potential of soil proposed as construction fill (Kleinfelder, 2002b).

Between July 2000 and February 2001, 251 soil samples were collected from 86 boring locations along unpaved areas adjacent to the freeway. For most sampling locations, a soil sample was collected at depths of one-half, one, and two ft bgs. Each soil sample was analyzed for total lead.

A total of 63 soil samples (most with total lead concentrations ranging from 50 to 350 mg/kg) were analyzed for soluble lead.

A statistical evaluation of the total and soluble lead analytical data for soils collected from one-half and one foot bgs resulted in a 95 percent upper confidence limit ("UCL") value of 259 mg/kg and 6.0 mg/L, respectively. Therefore, the upper one foot of soils at the proposed improvement project would be considered a California hazardous waste based on soluble lead concentrations. However, the soil may be suitable for reuse within Caltrans rights-of-way, under the DTSC variance.

4.4 Preliminary Site Investigation

In June 2002, a Preliminary Site Investigation ("PSI") Report was prepared to evaluate the soil and groundwater impact at the proposed improvement area and at the Caltrans yard near Old Middlefield Way.

Sixteen soil samples were collected from 15 geotechnical borings; an additional soil sample was collected from the saturated zone. Soil samples were collected from the unsaturated zone at depths ranging from seven to 28 ft bgs. The soil sample from the saturated zone was collected at 52 ft bgs. Five out of 16 soil samples collected from the unsaturated zone contained VOC concentrations ranging from 0.0006 to 2,700 mg/kg. No VOCs were detected in the soil sample collected from the saturated zone.

Groundwater samples were collected in the shallow zone from 13 geotechnical borings. Additional water samples were collected from the upper and lower intermediate zones in one boring. Of the 15 groundwater samples, nine water samples, including two from the upper and lower intermediate zones, contained VOCs, indicating that the VOC-affected groundwater in the shallow zone has impacted the two lower water-bearing zones.

Soil and groundwater samples were collected from four borings at the Caltrans yard. Soil samples were collected at one and two feet above the shallow zone, while groundwater samples were collected at the shallow zone. Soil and groundwater samples were analyzed for VOCs, metals, organochlorine pesticides, and polychlorinated biphenyls ("PCBs"). The analytical results confirmed the VOC-affected soil and groundwater beneath the Caltrans yard, but did not indicate impacts for metals, organochlorine pesticides, or PCBs.

5. HISTORICAL LAND USES

Historical land uses in the vicinity of the project area were determined through review of available aerial photographs from 1939 through 1998 and historical topographic maps from 1899 through 1997. Information from these land use resources were verified using City directory information. Sanborn fire insurance maps were not available for the project area. The historical land use resources reviewed for this ISA are included in Appendices B through E, and summarized below.

The vicinity of the project area was largely undeveloped except for some roads that were apparent on an 1899 topographic map, the earliest land use resource available for the project

area. Some of the roads apparent at that time included Embarcadero, Charleston, and Stierlin Roads. Stierlin Road is known today as Shoreline Boulevard.

U.S. 101 was constructed as a four-lane highway in 1932, and was apparent on aerial photographs dated 1939. The 1939 aerial photographs showed that developed land use near the highway was concentrated in the vicinity of Charleston and Middlefield Roads.

In 1943, U.S. 101 was identified as Bayshore Boulevard with a designation of U.S. 101 Bypass, as indicated on a 1943 topographic map. The designation of U.S. 101 was apparently assigned to El Camino Real, a roadway parallel to the alignment of Bayshore Boulevard from Palo Alto to Sunnyvale, as shown on the 1943 topographic map.

Through the 1940s, development at the vicinity of the project area continued to grow with the addition of roads, schools, and municipal facilities shown on topographic maps dated 1947 and 1948. The 1947 and 1948 topographic maps showed developed land uses in the vicinities of Embarcadero Road and between San Antonio and Stierlin Roads. Some of the land uses indicated on the 1948 topographic map included a municipal airfield and sewage disposal facility in Palo Alto and a Naval Air Station in Mountain View.

By 1953, Bayshore Boulevard was apparently renamed to Bayshore Highway, as indicated on a 1953 topographic map. In 1958, Bayshore Highway was widened to a six-lane highway. In 1961, Bayshore Highway was renamed Bayshore Freeway, but kept its designation as U.S. 101 Bypass, as indicated on a 1961 topographic map. By this time, the Bayshore Freeway included interchanges at Embarcadero Road, San Antonio Road, Rengstorff Avenue, and Stierlin Road and an overcrossing at Middlefield Road. The 1961 topographic map also showed developed land use on the PSS site.

By 1965, the frontage roads, East Bayshore Boulevard and West Bayshore Boulevard, and the Oregon Expressway interchange had been constructed, as shown on aerial photographs dated 1965. Other apparent land uses shown on the 1965 aerial photographs included commercial office buildings near Embarcadero Road interchange; a community park, electrical sub-station, pump house, and a municipal service center between Oregon Expressway and San Antonio Road interchange; industrial, light industrial, and commercial buildings near San Antonio Road interchange; and light industrial and residential establishments between Rengstorff Avenue interchange and Middlefield Road overcrossing. The property on the southwest corner of Rengstorff Avenue interchange appeared developed at this time, but the existing Caltrans yard site near the Middlefield Road overcrossing appeared vacant at this time. The TSI site, adjacent to the Stierlin Road interchange, was also apparent on an aerial photograph dated 1965.

By 1968, the Bayshore Freeway had been redesignated to U.S. 101, as shown on a 1968 topographic map. By 1973, the SPI site had been developed, as shown on a 1973 topographic map. In 1974, land use on the existing Caltrans yard was apparent, as shown on a 1974 aerial photograph.

Land uses at the project area and adjacent areas remained mostly unchanged as shown on aerial photographs dated 1982, 1991, and 1998 and historical topographic maps dated 1991 and 1997. U.S. 101 was widened to an eight-lane freeway in 1991.

6. REGULATORY AGENCY DATABASE REVIEW

BASELINE contracted with Environmental Data Resources, Incorporated (“EDR”), an environmental resource service, to conduct a search of Federal, State, and local regulatory agency databases pertaining to past and present hazardous materials use and release on properties at and near the project area (EDR, 2008). For the purposes of this ISA, the regulatory agency database report was reviewed to determine whether hazardous materials issues were present at properties within the project area (Section 6.1) and properties considered for additional rights-of-way (Section 6.3). In addition, sites within one-eighth mile of the project area under active regulatory oversight were reviewed to determine whether they could potentially affect conditions at the project area (Sections 6.2 and 6.4). The properties considered for additional rights-of-way with corresponding database listings and their available statuses are summarized in Table 1, and shown on Figure 3. Release sites within one-eighth mile of the project area under active regulatory oversight identified in the database report searched by EDR are summarized in Table 2, and shown on Figure 5. The complete environmental database report is included in Appendix F.

6.1 Project Area

Sites I and J are located on the southwest corner of Rengstorff Avenue within the project area (Figure 3). Sites I and J are also included on the list of properties considered for additional rights-of-way (Table 1). Site I was listed on the HAZNET database, which is associated with shipments of hazardous wastes and on the LUST database, which is associated with a leaking underground storage tank (Figure 3 and Table 1). Site J was not listed in any database report searched by EDR (Table 1). In addition to Site J, the Caltrans yard near the Old Middlefield Way on-ramp to southbound U.S. 101 was not listed on any regulatory database.

The listing of Site I on the HAZNET database was related to disposal of organic waste to an off-site facility, while the LUST listing was due to a reported release of gasoline from an underground tank in 1988 affecting groundwater (Table 1). The case was closed in 1999, indicating that remediation has been completed or was not necessary.

Based on the above information, no hazardous materials issues appear to be present at Sites I and J that could affect the proposed project.

6.2 Adjacent Properties

Twenty-one sites under active regulatory oversight were identified within one-eighth mile of the project area (Figure 5 and Table 2). Of the twenty-one sites, seven sites (Sites 4, 5, 8, 9, 10, 17, and 20) are adjacent to the project area (Figure 5 and Table 2). The database report did not provide additional information regarding the release of hazardous materials at Site 9 (Figure 5 and Table 2). Below is a description of sites 4, 5, 8, 10, 17, and 20.

6.2.1 CTS Printex Facility-Sites 4 and 20

Sites 4 and 20 were part of the former CTS Printex facility (“CTS”), which manufactured circuit boards from 1966 through 1985 (ATSDR, 1991; EDR, 2008) (Figure 5). The location of the former CTS facility is one of the properties considered for additional rights-of-way (Site M on

Figure 3 and Table 1). In 1985, a soil and groundwater investigation was initiated by the facility owner as part of the facility closure process (ATSDR, 1991). The findings of the investigation identified the presence of chlorinated VOCs, metals, and other contaminants in soil and groundwater samples (ATSDR, 1991). In 1990, the U.S. Environmental Protection Agency placed the CTS facility on the National Priority List.

Groundwater monitoring from a network of seven on-site wells and 24 off-site wells defined the groundwater plume as extending approximately one-eighth mile north and one mile west, crossing underneath U.S. 101 (ATSDR, 1991) (Figure 5). In addition to the monitoring wells, three on-site and four off-site extraction wells assisted in the remediation of groundwater (ATSDR, 1991). The extraction wells drew groundwater from affected aquifers preventing further lateral migration of contaminants in groundwater (ATSDR, 1991). The extracted groundwater was discharged into the sanitary sewer for treatment (EPA, 2008a). Groundwater remediation began in 1986, which included the removal of approximately 255 cubic yards of affected soil (EPA, 2008a).

In 1991, the Agency for Toxic Substances & Disease Registry reviewed the 1990 groundwater data from the on- and off-site wells and indicated that future exposure to groundwater contaminants is unlikely to occur if the groundwater extraction system would continue to reduce the concentration of contaminants in groundwater.

6.2.2 Plymouth Street Site-Site 5

Site 5 is identified in the database report as Montwood (Figure 5 and Table 2). Montwood is the holding company that purchased the property in 1980 (ERM, 2006). The former Montwood property was located on Plymouth Street near the Old Middlefield Way overcrossing (Figure 5). The former Montwood property was identified as the Plymouth Street Site in the ISA/LSE conducted for the Highway 85/101 Interchange Project.

In 1982, Montwood sold the property to South Bay Construction and Development Company, which redeveloped the property (ERM, 2006). Prior to redevelopment, the Montwood site was associated with industrial operations, including steel fabrication, machining, fibreglassing, painting, product development, and warehousing (ERM, 2006). The groundwater contamination underlying the Montwood site is partly attributed to previous industrial operations; this plume is within the regional VOC-affected groundwater plume (ERM, 2006).

Remediation of groundwater has been performed at the Montwood site since October 1994, when the operation of the extraction system began (ERM, 2006). The extraction system draws groundwater to reduce the concentrations of contaminants in groundwater and to limit the spread of affected groundwater (ERM, 2006). Groundwater data collected from 1994 through 2005 indicated that the concentrations of contaminants in groundwater have reduced over time, but the groundwater plume dimension underneath the Montwood site have remained relatively unchanged (ERM, 2006). The groundwater plume underneath the Montwood site is affected by the upgradient SPI and TSI sites (Sites 10 and 17 on Figure 5 and Table 2).

6.2.3 Space Systems/Loral-Site 8

Site 8 is currently under remediation under a cleanup order (“Order”) adopted by the Water Board, which includes an adjacent property to the south (Site 11) (Figure 5 and Table 2). The Order contains cleanup requirements for Sites 8 and 11 identified as Space Systems/Loral (“Loral”) and Campus for Jewish Life (“CJL”), respectively, in the *Final Groundwater Cleanup Plan (“Final GCP”)*, prepared for the affected properties. The Order also regulates cleanup activities for a third parcel identified as Far Western at 3977/3963 Fabian Way (Geomatrix, 2006). This parcel is adjacent to the CJL property, but the property was not listed in any of the databases searched by EDR.

The groundwater underneath the Loral site has been affected by migration of VOC-affected soil and groundwater from the upgradient CJL site (Geomatrix, 2006) (Figure 5). The *Final GCP* addressed the downgradient migration of VOC-affected groundwater by proposing to reduce the contaminant mass in the upgradient source zone and enhance bioremediation of affected groundwater. In 2007, remedial activities as required by the Water Board’s Order were performed at the affected properties (Geomatrix, 2007). Some of the remedial activities include performance of groundwater monitoring, extraction and treatment of groundwater at the Loral site, installation of a permeable reactive barrier between the source zone and the Loral site, and performance of in-situ bioremediation pilot study at the source zone (Geomatrix, 2007). The 2007 groundwater monitoring data reported historical highs in some wells for VOC concentrations, indicating that an off-site source may be affecting groundwater quality (Figure 5).

6.2.4 Teledyne Semiconductors, Incorporated/Spectra-Physics, Incorporated-Sites 10 and 17

Sites 10 and 17 are adjacent properties identified in the database report as Telcom Semiconductors, Incorporated (“Telcom”) and Spectra-Physics, Incorporated, respectively (Figure 5 and Table 2). Since the early 1960s, Sites 10 and 17 have been manufacturing facilities of semiconductors and gas lasers, respectively (EPA, 2008b; EPA, 2008c). The Telcom site was identified as Teledyne Semiconductors in the 2000 ISA/LSE and 2002 ISA prepared for the Highway 85/101 Interchange Project.

In the early 1980s, remedial investigations performed at each facility found impacts of VOCs in soil and groundwater (EPA, 2008b; EPA, 2008c). In addition, the remedial investigations revealed that the groundwater plume from each site has merged and migrated north (EPA, 2008b; EPA, 2008c) (Figure 5). Since then, remediation of soil and groundwater has been performed jointly by Telcom and SPI. Remedial actions included removal of impacted soil and extraction of affected groundwater from a network of on- and off-site wells (EPA, 2008b; EPA, 2008c). The extraction of groundwater continues until established cleanup goals are met (EPA, 2008b; EPA, 2008c).

6.3 Properties Considered for Additional Rights-of-Way

Eighteen properties adjacent to the project area, which are being considered for additional rights-of-way, were evaluated for potential hazardous materials issues as part of this ISA. Of the eighteen properties, three properties were listed on databases associated with hazardous materials releases (Sites I, M, and Q on Figure 3 and Table 1). Site I is within the project area; a discussion of this site is in Section 6.1. Site M is the former CTS Printex facility, which is

discussed in Section 6.2.1. Site Q was part of the former Montwood facility, also referred to as the Plymouth Street Site. Site Q was listed on the California Hazardous Materials Incident Report System due to a release of approximately 4,300 gallons of contaminated water into the storm drain system in 2001. No other information regarding the release was provided by the database report.

Ten sites (Sites D, G, H, I, M through R) were listed in California's HAZNET database, which tracks the shipment of hazardous waste through manifest data submitted to the State (Figure 3 and Table 1). Three sites were listed as generators of RCRA⁵ hazardous waste; two sites (Sites A and P) were registered as small quantity generators, indicating the generation of between 100 and 1,000 kilograms ("kg") per month of non-acutely hazardous waste, and one site (Site Q) was registered as a large quantity generator, indicating the generation of greater than one kg per month of acutely hazardous waste and/or 1,000 kg per month of non-acutely hazardous waste (Figure 3 and Table 1).

Four sites (Sites B, H, M, and Q) were listed on the BAAQMD's⁶ Toxic Emissions Inventory ("EMI"), which is associated with emission of chemicals into the atmosphere under permit (Figure 3 and Table 1). Of these sites, two (Sites B and Q) were registered with the State's Water Discharge System as permitted dischargers of wastewater generated from industrial processes (Figure 3 and Table 1).

Sites C, E, F, J, K, and L were not listed on any database report searched by EDR (Figure 3 and Table 1)

Sites with reported releases of hazardous materials affecting soil and/or groundwater have the potential to impact conditions at the project area. Therefore, Sites M and Q, with known VOC-impacts in groundwater, are considered likely to affect conditions at the project area.

6.4 Other Properties within One-Eighth Mile of the Project Area

Seven sites (Sites 1, 2, 6, 7, 13, 14, and 16) were listed on the SLIC database (Figure 5 and Table 1). One site (Site 3) was listed on the State's LUST database (Figure 5 and Table 1). Two sites (Sites 12 and 19) were listed on the State's Cortese database (Figure 5 and Table 1) with no additional information. Three sites (Sites 15, 18, and 21) were listed on the DTSC Envirostor database (Figure 5 and Table 1).

Based on the above information, releases from sites adjacent to and near the project area have affected groundwater quality at and near the project area. Specifically, the groundwater in the vicinity of the San Antonio Road interchange and between Old Middlefield Way overcrossing and the Shoreline Boulevard interchange have been affected by reported releases of VOCs and other contaminants from properties adjacent to the freeway. In addition, the above information indicated that a regional VOC-affected groundwater plume exists at least in the southeastern half of the project area. Therefore, other sources of contamination in addition to the sites adjacent to the project area, as described above, could be contributing to the regional groundwater problem.

⁵ The Resource Conservation and Recovery Act is the primary Federal law governing over the storage, treatment, and disposal of hazardous waste.

⁶ The Bay Area Air Quality Management District is the local agency responsible for implementing air quality regulations in the project area.

7. RECONNAISSANCE OF THE PROJECT AREA AND ADJACENT PROPERTIES

A BASELINE environmental engineer conducted a visual reconnaissance of the project area and adjacent properties on 31 January 2008. The purpose of the reconnaissance was to ascertain visual evidence of use, storage, generation, release, and disposal of hazardous materials at the project area and adjacent properties based on current land uses. The observations presented in this section were made from public rights-of-way. Photographs taken during the reconnaissance are shown on Figures 6 through 8.

7.1 Project Area

The project area consists of: U.S. 101; interchanges, including on- and off-ramps at Embarcadero Road, San Antonio Road, Rengstorff Avenue, and Shoreline Boulevard; a freeway overcrossing at Old Middlefield Way; a restaurant on the southwest corner of the Rengstorff Avenue interchange; frontage roads, East Bayshore Boulevard and West Bayshore Boulevard; a Caltrans yard adjacent to the Old Middlefield Way on-ramp to southbound U.S. 101; and a storage yard of construction materials near San Antonio Road and Transport Street. No evidence of hazardous materials use, storage, generation, release, and disposal was noted on properties within the project area except for the Caltrans yard and the storage yard near Transport Street.

The Caltrans yard contained a building, a storage container, two metal boxes, wood posts, freeway signage, and other miscellaneous items (Photo 1 on Figure 6). One of the metal boxes was intended to be a debris box to receive scrap aluminum, as indicated on a label (rusted metal box on Photo 2 on Figure 6). The purpose of the other metal box is unknown based on field observations since the box was unlabeled and covered (red-painted metal box on Photo 2 on Figure 6). The appearance of the red metal box is similar to containers used for storage and transport of contaminated soil. No evidence of hazardous materials use, storage, generation, release, and disposal was noted for the Caltrans yard.

A storage yard of construction materials was observed between the San Antonio Road interchange and Transport Street (Figure 7). The perimeter of the storage yard was completely fenced; therefore, the contents of the yard were not visible from public areas except through a small opening through the yard gate, which was open at the time of reconnaissance. Some of the items observed in the storage yard include a mobile trailer, a dump truck, a weighing scale, and stockpiles of sand material (Photos 3 and 4 on Figure 7). No evidence of hazardous materials use, storage, generation, release, and disposal was noted on the visible portion of this property.

7.2 Adjacent Properties

Land uses on properties adjacent to the project area potentially associated with hazardous materials include manufacturing facilities, a municipal service center, and the former Montwood site. No evidence of hazardous materials use, storage, generation, release, and disposal was noted on properties adjacent to the project area based on observations made on public rights-of-way, except for the former Montwood site, which appeared to be undergoing remediation.

The former Montwood property was surrounded by a chain link fence with portions of the pavement removed (Photo 5 on Figure 8). Two 55-gallon drums and two portable tanks were

observed on the former Montwood property (Photo 6 on Figure 8). The label on one of the drums indicated that the contents of the drum were non-hazardous (Photo 6 on Figure 8). No other evidence of hazardous materials use, storage, generation, release, and disposal was observed on the former Montwood property.

8. CONCLUSIONS

- Based on review of previous investigations conducted at and near the project area, the groundwater underneath the area in the vicinity of Shoreline Boulevard has been affected by known releases of VOCs from three properties adjacent to the project area. Two of the three properties were listed as Superfund sites. Based on the information reviewed, VOC-affected groundwater extends beneath the Caltrans yard located near Old Middlefield Way.
- Soil quality at the project area are likely affected by ADL, based on analytical data from ADL investigations conducted at and near the project area. The ADL investigations indicated that some shallow soil near the freeway would likely to be classified as a California hazardous waste based on soluble lead concentrations. However, the soil may be suitable for reuse within Caltrans rights-of-way under the DTSC variance.
- Based on groundwater data available from remediation sites near the project area, the depths to groundwater across the project area range from five to eight ft bgs. Therefore, the reuse of ADL-affected soil may not be allowed in some areas where there would not be a minimum five-foot separation between the groundwater and the lead-affected soil, as required by the current DTSC variance for lead-affected soil.
- A previous soil investigation conducted at and near the project area detected VOCs in soil samples collected from the unsaturated zone. Therefore, construction workers could be exposed to affected soils either through direct contact or inhalation of vapors that could accumulate at confined spaces, such as trenches.
- A soil and groundwater investigation conducted at a Caltrans yard indicated VOC impacts in soil and groundwater, but did not indicate impacts from pesticides, PCBs, or metals.
- The groundwater underlying the vicinity of the project area from the San Antonio interchange to the Old Middlefield Way overcrossing have been affected by releases of VOCs from sites adjacent to and near the project area, based on review of regulatory database report and available environmental documents from active remediation sites adjacent to the project area. The known VOC-affected groundwater from several properties adjacent to the project area contributes to a regional groundwater problem that appears to be present at least in the vicinity of the San Antonio Road interchange and Shoreline Boulevard within the project area.
- No evidence of hazardous materials use, storage, generation, release, and disposal was observed on the project area and adjacent properties. However, these observations do not preclude the potential for hazardous materials issues that may be present at properties

within the project area and/or adjacent properties that were not visible from public rights-of-way.

9. RECOMMENDATIONS

Based on the findings of this investigation, BASELINE recommends:

- Prior to project development, a soil investigation should be conducted at the project area to determine whether ADL or VOCs have affected soils that will be excavated as part of the proposed project. The scope of the investigation should take into account previous data collected during the Highway 85/101 interchange investigation. The investigation for ADL should be performed in accordance with the Caltrans' Lead Testing Guidance Procedure. The analytical results should be compared against applicable hazardous waste criteria and the DTSC variance for lead-affected soil. Based on analytical results, the investigation should provide recommendations regarding management and disposal of affected soils in the project area including the reuse potential of VOC-affected soil during project development.
- Prior to project development, a groundwater investigation should be performed to determine whether groundwater has been affected by VOCs or other contaminants in areas if the proposed excavation is expected to encounter groundwater. In addition, groundwater depths should be determined in areas that may be proposed to receive lead-affected soils. Under the DTSC variance for lead-affected soil, soil impacted with ADL can be reused as construction fill provided that it is placed at least five feet above maximum groundwater level. If dewatering is anticipated by the proposed project, the investigation report should provide recommendations regarding proper treatment, if necessary, and disposal or reuse of affected groundwater.
- A survey of existing wells in the immediate vicinity of the project area should be performed prior to project development. Wells that are affected by the proposed project may require abandonment and/or relocation in accordance with Federal, State, and local requirements.

10. LIMITATIONS

This ISA report is intended to provide an understanding of the current environmental conditions at the project study area. BASELINE's interpretations and conclusions regarding this information and presented in this report are based on the expertise and experience of BASELINE in conducting similar assessments and current Federal, State, and local regulations and standards.

BASELINE's objective is to perform our work with care, exercising the customary thoroughness and competence of earth science, environmental, and engineering consulting professionals, in accordance with the standard for professional services for a consulting firm at the time these services were provided. It is important to recognize that even the most comprehensive scope of services may fail to detect environmental conditions and potential liability at a particular site. Therefore, BASELINE cannot act as insurers and cannot "certify or underwrite" that a site is free of environmental contamination, and no expressed or implied representation or warranty is

included or intended in this report except that the work was performed within the limits prescribed with the customary thoroughness and competence of our profession.

The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration at the project site, analysis of the data, and re-evaluation of the findings, observations, conclusions, and recommendations expressed in the report.

The findings, observations, conclusions, and recommendations expressed by BASELINE in this report are limited by the scope of services and should not be considered an opinion concerning the compliance of any past or current owner or operator of the site with any Federal, State, or local law or regulation. No warranty or guarantee, whether express or implied is made with respect to the data reported or findings, observations, conclusions, and recommendations expressed in this report.

Site Location	Site Name	Site Address	Database	Status
P	OLDS PRINTING, INC.	1914 PLYMOUTH ST.	HAZNET; SQG	Disposed of photochemicals and photoprocessing waste and metal sludge. Generator of wastes with ignitable properties and waste containing organic compounds.
Q	SANMINA PLANT 4	1625 PLYMOUTH ST.	HAZNET; LQG; EMI; WDS; CHMIRS	Disposed of waste containing metals. Generator of wastes with ignitable, corrosive, and reactive properties; waste containing metals, chloroform, and/or formaldehyde; and wastewater treatment sludges. No violations were reported for this site. Listed on the BAAQMD's Emissions Inventory from 1998 through 2005. Registered as an active industrial facility with continuous or seasonal discharge permitted under Waste Discharge Requirements. A pipe failure in a groundwater vault resulted in the release of contaminated water into the storm drain system.
R	AEHR TEST SYSTEMS INC	1667 PLYMOUTH AVE	HAZNET	Disposed of inorganic solid waste.

Notes:

See Figure 3 for site locations.

The EDR Radius Atlas report is included in Appendix F.

BEP = database of sites authorized for cleanup under the Bond Expenditure Plan developed by the California Department of Health Services as a site-specific expenditure plan for an appropriation of the Hazardous Substance Cleanup Bond Act funds.

CHMIRS = California Hazardous Materials Incident Report System; a database of hazardous materials releases.

EMI = Emissions Inventory database for toxics and air pollutants collected by the State and air districts. The Bay Area Air Quality Management District (BAAQMD) is the local agency with jurisdiction over the project area.

HAZNET = State database of hazardous waste shipments based on manifest data.

LUST = State database of leaking underground petroleum storage tank sites.

LQG = large quantity generator generating over 1,000 kilograms of hazardous waste, as defined by RCRA, per month.

RCRA = the Resource Conservation and Recovery Act is primary Federal law governing hazardous waste.

SQG = small quantity generators generating between 100 kilograms and 1,000 kilograms of hazardous waste, as defined by RCRA, per month.

VOC = volatile organic compounds.

WDS = State database of permitted dischargers under the Waste Discharge System.

TABLE 2: Release Sites under Active Regulatory Oversight within One-Eighth Mile of the Project Area
 U.S. 101 Auxiliary Lanes Project
 Palo Alto to Mountain View, California

Site Location	Site Name	Site Address	Database	Status
1	BELL INDUSTRIES INC PRECISION METALCRAFT	2637 MARINE WAY MOUNTAIN VIEW CA	SLIC	Release of VOCs affecting soil and groundwater attributed to historic operations at the site. Remediation of soil and groundwater have been performed at the site. The site is currently seeking a No Further Action decision from the Water Board.
2	EAST CHARLESTON BUSINESS PARK	2513-2525 EAST CHARLESTON ROAD MOUNTAIN VIEW CA	SLIC	The site is currently under remediation to cleanup chlorinated solvents detected in groundwater. In November 2005, hydrogen-releasing compounds were applied to the affected aquifer to reduce contaminants in groundwater.
3	CHARLESTON BUSINESS PARK	2400 60 CHARLESTON RD MOUNTAIN VIEW CA	LUST	Release of solvents affecting groundwater in 1994. No other information regarding the release was provided in the database report.
4	CTS PRINTEX CORPORATION	1950 COLONY STREET MOUNTAIN VIEW CA	BEP; NPL; CERCLIS	An investigation conducted in 1985 found metals and VOCs in soil near the site and VOCs in downgradient monitoring wells. Remediation has been performed at the site since then. Some of the remediation performed at the site included excavation and off-site disposal of affected soil, groundwater monitoring, and groundwater extraction and treatment.
5	MONTWOOD	1615 PLYMOUTH ST. MOUNTAIN VIEW CA	SLIC	The groundwater underneath the site was impacted by VOCs from on- and off-site sources. The site is currently under remediation. Part of site remediation is the operation of an extraction system and implementation of a series of chemical oxidation events to reduce the concentration of VOCs in groundwater.
6	W V P INCOME PLUS II	2690 CASEY AVE MOUNTAIN VIEW CA	SLIC	A remedial investigation performed at the site and at a downgradient property in October 2007 identified the presence of chlorinated VOCs in soil and groundwater from the shallow zone at areas near and downgradient from the site. The depth of VOC-affected soil was found to be in the upper 30 feet. The site is approximately 700 feet downgradient of the project site.
7	1201 SAN ANTONIO ROAD	1201 SAN ANTONIO ROAD MOUNTAIN VIEW CA	SLIC	This site is the downgradient adjacent property to Site 6 described in the 2006 remedial investigation report for Site 6. The remedial investigation identified chlorinated VOCs in soil near the end of San Antonio Road. In addition, VOC concentrations were detected in groundwater from the shallow zone in a downgradient area to the north of the site.
8	FORD AEROSPACE CORP/ SPACE SYSTEMS LORAL	3825 Fabian Way Mountain View CA	ERNS; SLIC	Reported spill of approximately 250 gallons of wastewater containing ethylbenzene and acetone caused by a leak in a wastewater container. The database report did not indicate whether soil or groundwater was affected. The groundwater underneath the site was affected by VOCs released from multiple upgradient sources. Remedial action is underway.

**TABLE 2: Release Sites under Active Regulatory Oversight within One-Eighth Mile of the Project Area
U.S. 101 Auxiliary Lanes Project
Palo Alto to Mountain View, California**

Site Location	Site Name	Site Address	Database	Status
9	FORMER SYMTRON FACILITY	4019 TRANSPORT STREET PALO ALTO CA	SLIC	The database report did not provide additional information regarding the release.
10	TELCOM SEMICONDUCTORS INC	1300 TERRA BELLA AVE MOUNTAIN VIEW CA	NPL; CERCLIS	Release of solvents affecting soil and groundwater underneath the site was reported to the Water Board in 1982. In 1984, an investigation indicated that site contaminants had migrated northward and affected approximately 50 private domestic wells.
11	901 SAN ANTONIO ROAD	901 SAN ANTONIO ROAD PALO ALTO CA	SLIC	The subsurface of the site have been impacted by petroleum hydrocarbons and chlorinated VOCs resulting from previous site operations and from upgradient sources. Pollution characterization underway. This site is upgradient from Site 8.
12	MICROFAB SYSTEMS CORP	3960 FABIAN WAY PALO ALTO CA	CORTESE	The database report did not provide additional information regarding the release.
13	BAY CENTERLESS GRINDING	939 INDUSTRIAL AVENUE PALO ALTO CA	SLIC	A soil investigation conducted in 2007 found metals and VOCs in shallow soil samples collected underneath the building floor slab. The results of confirmation soil samples collected following remedial excavation of affected soil indicated that significantly affected soil have been removed. The 2007 investigation report also indicated that groundwater quality underneath the site has been affected by the regional VOC-affected groundwater and a reported release of chlorinated solvents from a nearby upgradient site.
14	DYNAMIC VALVES	923 INDUSTRIAL AVENUE	SLIC	Reported release of chlorinated organic compounds affecting groundwater. No other information regarding the release was provided by the database report. This site is upgradient from Site 13.
15	DAVILA INTERNATIONAL CIRCUITS	2420 CHARLESTON ROAD MOUNTAIN VIEW CA	ENVIROSTOR	U.S. EPA recommended further investigation of groundwater contamination that may have resulted from the storage and use of hazardous chemicals at the site. No additional information regarding the potential contamination of groundwater was provided in the database report.
16	CHARLESTON BUSINESS PARK	2400-2460 CHARLESTON RD MOUNTAIN VIEW CA	SLIC	Soil and groundwater remediation has been performed at the site. However, low levels of VOCs remain in groundwater. The source of the remaining VOC in groundwater appears to be from off-site sources.

**TABLE 2: Release Sites under Active Regulatory Oversight within One-Eighth Mile of the Project Area
U.S. 101 Auxiliary Lanes Project
Palo Alto to Mountain View, California**

Site Location	Site Name	Site Address	Database	Status
17	SPECTRA-PHYSICS INC	1250 W MIDDLEFIELD ROAD MOUNTAIN VIEW CA	NPL; CERCLIS	This site is adjacent to Site 10. The VOC-affected groundwater underneath the site has merged with the groundwater plume from the adjacent property. Extraction wells have been operated at the site as part of groundwater remediation to control off-site migration of affected groundwater.
18	FORD AEROSPACE & COMMUNICATION	3939 FABIAN WAY PALO ALTO CA	ENVIROSTOR	Some of the potential site contaminants include metals, PCBs, halogenated organics, halogenated solvents, hydrocarbon solvents, oxygenated solvents, acidic solutions, and free cyanide. No information regarding soil or groundwater quality at the site was provided in the database report.
19	WHISMAN SCHOOL DISTRICT	1695 ROCK ST MOUNTAIN VIEW CA	CORTESE	No additional information regarding the release was provided in the database report. The site is approximately 600 feet from the project area.
20	SCR-CTS PRINTEX/ADN CORP.	1911 PLYMOUTH MOUNTAIN VIEW CA	CORTESE	No additional information regarding the release was provided in the database report.
21	FORD AEROSPACE	1036 EAST MEADOW CIRCLE PALO ALTO CA	ENVIROSTOR	Site is used as a storage facility of hazardous waste. Potential site contaminants include PCBs, oxygenated solvents, photochemicals/photoprocessing waste, acidic solutions with and without metals, and free cyanide. No information regarding soil or groundwater quality at the site was provided in the database report.

ISA Determination	DD-4

Preparation Guidelines for Initial Site Assessment (ISA) Checklist for Hazardous Waste

The ISA Checklist is a guide for district screening and assessment of projects for potential hazardous waste involvement. It is not intended to take a lot of time and effort to complete; however, some assessments may take longer to complete just because of the magnitude and/or location of a proposed project.

Project Information Section

Be sure that the Project Manager and Project Engineer have been identified. Do not begin the ISA until the written project description and location maps have been provided (Since hazardous waste could effect project development, it is important to know what type of work is proposed and where it will be located).

Location Map

It is suggested that the location map provided by Design be attached to the ISA Checklist to provide a record of the area that has been assessed, as well as the findings. All future project limit changes should cause Design to request further assessment for hazardous waste.

Project Screening Section

Items 1 and 2 are risk indicators that could be used to determine the level of effort required to complete the ISA. Generally, a project that requires new right of way, excavation, structure modification or demolition, or utility relocation will have a greater potential for hazardous waste involvement than a project that does not include these features. An urban location would generally present more of a risk than a rural location; industrial land uses would generally be more risky than commercial uses; and so on.

Items 3 through 6 deal with the actual assessment:

- First, check available records to see if a known site is present. This item should not take a lot of effort, but it will require contacting the Regional Water Quality Control Board, the Department of Health Services, and the city/county agencies that deal with leaking underground tanks.
- Next, conduct a field inspection to look for indicators of potential hazardous waste or contamination. Identify businesses that store or use potentially hazardous materials (service stations, auto wrecking yards, paint companies, machine shops, metal platers, electronic manufacturers, dry cleaners, agricultural chemical suppliers, etc.).

Other things to look for include landfills and dumps, surface storage of potentially hazardous materials (sumps, pits, steel drums, etc.), illegal dumping sites (especially on rural projects), and serpentine.

- Based on the field inspection, if there may have been a previous land use that could still present a hazardous waste or contamination risk, it may be necessary to verify the previous land use (e.g., abandoned service stations can usually be identified by the type of structure and location: the underground tank may still be there).

ISA Determination

The ISA determination is simply "Yes" or "No."

NO: No findings have been made that would indicate a known or potential hazardous waste problem within or near the proposed project.

YES: A known or potential site has been identified that could affect the proposed project and will take more time and effort to define and coordinate cleanup options.

Initial Site Assessment (ISA) Checklist

Project Information

District 4 County Santa Clara Route NA Post Mile TBD EA EA04-4A330K
Description The project involves the construction of auxiliary lanes, one lane in each direction of US 101 freeway, between Embarcadero Road and Shoreline Boulevard. The construction of auxiliary lanes would widen US 101 to a 10-lane freeway and provide more room for traffic entering and exiting the freeway at each interchange. Other improvements proposed by the project include: widening and modification of on- and off-ramps at interchanges along the project alignment, widening of some bridge crossings, relocation and erection of soundwalls, erection of retaining walls, and relocation and installation of storm drain systems and utilities.

Is the project on the HW Study Minimal-Risk Projects List (HW1)? NO

Project Manager TBD phone # TBD

Project Engineer TBD phone # TBD

Project Screening

Attach the project location map to this checklist to show location of all known and/or potential HW sites identified. **SEE FIGURE 5 IN THE REPORT.**

1. Project Features: New R/W? YES Excavation? YES Railroad Involvement? NO
Structure demolition/modification? YES Subsurface utility relocation? YES

2. Project Setting _____

Rural or Urban Urban (a mix residential, landfill, commercial and industrial setting)

Current land uses Freeway and interchange

Adjacent land uses residences, commercial offices, manufacturing facilities, recreational park, municipal service center, wetlands

(industrial, light industry, commercial, agricultural, residential, etc.)

3. Check federal, State, and local environmental and health regulatory agency records as necessary, to see if any known hazardous waste site is in or near the project area. If a known site is identified, show its location on the attached map and attach additional sheets, as needed, to provide pertinent information for the proposed project.

4. Conduct Field Inspection. Date 31 January 2008 Use the attached map to locate potential or known HW sites. **See Figure 5 in ISA report**

STORAGE STRUCTURES / PIPELINES:

Underground tanks NO Surface tanks YES

Sumps NO Ponds NO

Drums YES Basins NO

Transformers NO Landfill NO

Other _____

Initial Site Assessment (ISA) Checklist

(continued)

CONTAMINATION: (spills, leaks, illegal dumping, etc.)

Surface staining NO Oil sheen NO

Odors NO Vegetation damage NO

Other NO

HAZARDOUS MATERIALS: (asbestos, lead, etc.)

Buildings NA Spray-on fireproofing NA

Pipe wrap NA Friable tile NA

Acoustical plaster NA Serpentine NO

Paint NA Other _____

5. Additional record search, as necessary, of subsequent land uses that could have resulted in a hazardous waste site. Use the attached map to show the location of potential hazardous waste sites. See Figure 5 in ISA report

6. Other comments and/or observations: _____

ISA Determination

Does the project have potential hazardous waste involvement? YES If there is known or potential hazardous waste involvement, is additional ISA work needed before task orders can be prepared for the Investigation? YES If "YES," explain; then give an estimate of additional time required: The ISA recommended an aerially-deposited lead investigation on shallow soils near the freeway that will be affected by the proposed project. In addition, a groundwater investigation should be performed to determine whether groundwater has been affected by hazardous materials releases in areas where the proposed excavation is expected to encounter groundwater. The schedule for these activities are driven by permits and approval of workplans.

A brief memo should be prepared to transmit the ISA conclusions to the Project Manager and Project Engineer.

ISA Conducted by Reginald Ramirez Date 02/05/08

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2001. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.'s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Total Maps: 0

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

Limited Permission To Make Copies

Baseline Environmental Cons. (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/02/2007 has revealed that there are 8 NPL sites within approximately 3 miles of the target property.

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 04/23/2007 has revealed that there are 11 CERCLIS sites within approximately 3 miles of the target property.

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/21/2007 has revealed that there are 27 CERC-NFRAP sites within approximately 3 miles of the target property.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/11/2007 has revealed that there are 5 RCRA-TSDF sites within approximately 3 miles of the target property.

EXECUTIVE SUMMARY

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/11/2007 has revealed that there are 24 RCRA-LQG sites within approximately 3 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/11/2007 has revealed that there are 231 RCRA-SQG sites within approximately 3 miles of the target property.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 09/11/2007 has revealed that there are 47 RCRA-NonGen sites within approximately 3 miles of the target property.

INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 07/16/2007 has revealed that there are 3 US INST CONTROL sites within approximately 3 miles of the target property.

EXECUTIVE SUMMARY

TSCA: The Toxic Substances Control Act identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site. The United States Environmental Protection Agency has no current plan to update and/or re-issue this database.

A review of the TSCA list, as provided by EDR, and dated 12/31/2002 has revealed that there is 1 TSCA site within approximately 3 miles of the target property.

EXECUTIVE SUMMARY

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 27 HIST FTTS sites within approximately 3 miles of the target property.

SSTS: Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

A review of the SSTS list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 SSTS site within approximately 3 miles of the target property.

EXECUTIVE SUMMARY

ICIS: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

A review of the ICIS list, as provided by EDR, and dated 07/27/2007 has revealed that there are 7 ICIS sites within approximately 3 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

HIST CAL-SITES: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 12 HIST Cal-Sites sites within approximately 3 miles of the target property.

EXECUTIVE SUMMARY

WMUDS/SWAT: The Waste Management Unit Database System is used for program tracking and inventory of waste management units. The source is the State Water Resources Control Board.

A review of the WMUDS/SWAT list, as provided by EDR, and dated 04/01/2000 has revealed that there is 1 WMUDS/SWAT site within approximately 3 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
SOLID WASTE DISPOSAL SITE	SE END OF EMBARCADERO R	1 - 2 N	1337	1849

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, and dated 04/01/2001 has revealed that there are 201 Cortese sites within approximately 3 miles of the target property.

CA FID: The Facility Inventory Database contains active and inactive underground storage tank locations. The source is the State Water Resource Control Board.

A review of the CA FID UST list, as provided by EDR, and dated 10/31/1994 has revealed that there are 164 CA FID UST sites within approximately 3 miles of the target property.

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 10/10/2007 has revealed that there are 43 UST sites within approximately 3 miles of the target property.

AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the AST list, as provided by EDR, and dated 09/17/2007 has revealed that there are 13 AST sites within approximately 3 miles of the target property.

SWEEPS: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1980's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 176 SWEEPS UST sites within approximately 3 miles of the target property.

EXECUTIVE SUMMARY

CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CHMIRS list, as provided by EDR, and dated 12/31/2005 has revealed that there are 59 CHMIRS sites within approximately 3 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2006 has revealed that there are 1281 HAZNET sites within approximately 3 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/28/2007 has revealed that there are 34 ENVIROSTOR sites within approximately 3 miles of the target property.

Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

 Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): Fairchild Semiconductor Corp. manufactures semiconductors in Mountain View, Santa Clara County, California. The facility occupies approximately 56 acres and is surrounded by residential and industrial areas. This site was originally proposed under the name Fairchild Camera Instrument Corp. Mountain View Plant). The company took the new name in 1986. Monitoring wells on the site are contaminated with trichloroethylene, 1,1,1-trichloroethane, 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Fairchild. Contamination is believed to have resulted from leaking underground tanks. About 270,000 people depend on wells within 3miles of the site for drinking water. Since early 1982, Fairchild has been investigating the site geology and hydrogeology and attempting to define the lateral and vertical extent of solvents underlying the site. Fairchild has installedtwo wells to pump and treat the contaminated ground water plume. The company is working with the California Regional Water Quality Control Board to further define the extent of contamination and outline various cleanup strategies. The plant received Interim Status under Subtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well astake specific action as necessary. Status February 1986): Continuing to determine the extent of ground water contamination, Fairchild has installed more than 100 monitoring wells. On August 15, 1985, EPA issued an AdministrativeOrder on Consent under CERCLA Section 106 a) to Fairchild s Mountain View Plant, as well as to Intel Corp. s and Raytheon Corp. s Mountain View Plants. The order calls for the companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action. Status June 1988): EPA is proposing to drop Fairchild Semiconductor Corp. s Mountain View Plant from the proposed NPL. Because the site is a treatment and storage facility, it is subject to the corrective action authorities of Subtitle C RCRA. Fairchild now has 25 wells in operation that pump and treat contaminated ground water; has installed three undergroundslurry walls to control migration of contaminated ground water. EPA has sealed two abandoned agricultural wells that were carrying contamination to the deeper aquifers. EPA may also pursue cleanup under RCRA authorities and will ensure that the cleanup protects public health and the environment. EPA can later repropose the site for the NPL if it determines that the owner or operator is unable or unwilling to clean up the site effectively. Status February 11, 1991): EPAis adding this site to the NPL because, although it is subject to RCRA Subtitle C, the transfer of primary

responsibility from CERCLA to RCRA would delay and complicate the overall cleanup of the site. The RI was concluded in July 1988. A draft FS and EPA's Proposed Plan were presented to the community for a 60-day public comment period in November 1988. EPA signed the Record of Decision (ROD) identifying the selected remedy on June 9, 1989. On September 21, 1990, EPA issued an Explanation of Significant Differences clarifying the ROD. In May 1989, EPA sent Special Notice Letters calling for a remedial design/remedial action (RD/RA) Consent Decree to Fairchild and 16 other parties potentially responsible for wastes associated with the site. Fairchild failed to conclude a settlement Consent Decree with EPA. On November 29, 1990, EPA issued Fairchild and eight other parties a Unilateral Administrative Order for RD/RA.

Site Description: The Jasco Chemical Company, (JASCO) repackaged and formulated chemical products on the 2.05 acre Villa Street site, located in the City of Mountain View (City), California, from 1976 until December 1995. The facility handled and stored numerous chemicals on site in underground storage tanks, 55-gallon drums, and other containers. Chemicals stored on site include methylene chloride, paint thinner, denatured alcohol, methanol, kerosene, lacquer thinner, and acetone. The JASCO site came to the attention of regulators in 1983 after a private citizen complained about the dumping of materials at the site. In 1984, the San Francisco Bay Region, Regional Water Quality Control Board (RWQCB) ordered JASCO to install a monitoring well at the site to

determine if the groundwater had been contaminated. Volatile organic compounds (VOCs) were found to be present in the groundwater. JASCO began extracting groundwater from the site on February 20, 1987 and discharged it to the publicly owned treatmentworks (POTW) after on-site treatment under a permit from the City. Action to address soil contamination at the site commenced in August 1988 when JASCO submitted a soil characterization report and runoff management plan to the RWQCB. The VOCs methylene chloride, trichloroethylene (TCE), toluene, and acetone were discovered in the soils located in the drainage swale area. JASCO excavated and disposed of 572 cubic feet of soil from the drainage swale area at the rear of the site during October 1988. EPA evaluated the JASCO site under the Hazard Ranking System and proposed the site for inclusion on the National Priorities List (NPL) in June 1988. In December 1988, EPA ordered JASCO to complete a remedial investigation and feasibility study for the site. In 1989, the JASCO site was placed on the NPL. The Remedial Investigation (RI) was completed in 1991 and the Feasibility Study (FS) was completed in 1992. In 1995, the City approved JASCO's Facility Closure Plan and notified JASCO that its POTW discharge permit would not be renewed after May of 1997. JASCO subsequently negotiated extensions to the permit to allow discharge to the POTW until March of 1998. Due to the City's removal of the POTW discharge permit, wastewater is now discharged to surface waters (Permanente Creek) under a general National Pollution Discharge Elimination System (NPDES) permit administered by the RWQCB which requires treatment to achieve discharge concentrations consistent with State maximum contaminant levels (MCLs). Because these levels are more stringent than those required under the City permit for POTW discharge, the method of treatment for extracted groundwater had to be changed in order to lower effluent concentrations. OU 1:A Record of Decision was completed on September 30, 1992 that addressed contaminated soil and groundwater on the JASCO property. This ROD proscribed the following: groundwater extraction, treatment, and discharge to a POTW; groundwater monitoring; on-site ex-situ biological treatment of contaminated soils with a contingency for off-site disposal of highly contaminated soils; and institutional controls to prevent future use of groundwater as a drinking water source or exposures of future on-site workers to VOC vapors. On September 13, 2002, an Explanation of Significant Differences (ESD) was filed to reflect changes in treatment strategies. The ESD included provisions for using soil vapor extraction (SVE) to remove VOCs from soils in the drainageswale, the use of an air stripper with vapor-phase carbon adsorption to treat groundwater, modified institutional controls, and the discharge of treated groundwater to surface water under a NPDES permit.

Other Pertinent Environmental Activity Identified at Site

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Summary Details:

Conditions at proposal June 24, 1988): Jasco Chemical Corp. has formulated chemical products on a 2.05-acre site in Mountain View, Santa Clara County, California, since 1976. The site is bordered on the northeast by the Central Expressway and the Southern Pacific Railroad, and on the remaining sides by residential neighborhoods. In January 1983, a citizen complained to the California Regional Water Quality Control Board (CRWQCB) that the facility was dumping solvents at the rear of the site on a daily basis. CRWQCB requested Jasco to install a monitoring well at the site to determine if ground water was contaminated. Both ground water and soil are contaminated at the site, according to analyses conducted by consultants to Jasco. Methylene chloride concentrations are as high as 142,000 parts per million in ground water, and soil is highly contaminated with pentachlorophenol to depths of 20 feet. Contamination is believed to have resulted from any of the following sources: an underground tank farm, two dry wells used for disposal of storm water run-off from the roof and paved portion of the site, and a drain that discharges surface run-off at the rear of the site. The company is working with CRWQCB to determine the extent of the contamination and to prevent further migration of the contaminants. In addition, the City of Mountain View closed nearby Municipal Well 17 in 1987, until the lateral and vertical extent of the pollution has been defined. About 333,000 people obtain drinking water from wells within 3 miles of the site. Status October 4, 1989): Jasco is pumping and treating ground water to remove contamination. In July 1988, Municipal Well 17 was returned to service. In November 1988, Jasco excavated 550 cubic feet of contaminated soil and transported it to a hazardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act.

Site Description: Moffett Field was continuously operated by the US military after it was commissioned in 1933 to support the West Coast Dirigibles of the lighter than air (LTA) program until 1994. In 1939, a permit was granted to Ames Aeronautical Laboratory to use part of the station. In 1942, the station was returned to Navy control and was named Naval Air Station Moffett Field. In late 1942, the heavier than air (HTA) program was initiated and began to take precedence over the LTA program. In 1945, the HTA program was moved and Moffett Field was used as a major overhaul and repair base. In 1949, the station became home to the Military Air Transport Service Squadron. By 1950, Moffett Field was the largest naval air transport base on the West Coast, and in 1953 it became home to all Navy fixed-wing land-based antisubmarine efforts. A weapons department was formed on the base in 1954, and in February 1966 the

1000228683

base activated its high speed refueling facilities. During the station reorganization in 1973, it became the headquarters of the Commander Patrol Wings, US Pacific Fleet. During the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons, and it became the largest P-3 Orion patrol aircraft base in the world with nearly 100 aircraft. No heavy manufacturing or major aircraft maintenance was conducted, but a significant amount of unit and intermediate level maintenance occurred. In April 1991, Moffett Field was designated for closure, and on July 1, 1994, control of the base was transferred to National Aeronautics and Space Administration (NASA). Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and PCBs. Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks (USTs) and sumps were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984. The Navy began conducting these environmental restoration activities as part of the Department of Defense Installation Restoration Program (IRP). The Navy conducted an initial assessment study (IAS) in 1984 to gather data on the past use and disposal of hazardous materials at the base. Nineteen sites were identified as potential sources of wastes, including nine sites identified in the IAS and 10 sites added during subsequent investigations. Five additional sites were identified during field investigation in the early 1990s. The Environmental Protection Agency (EPA) proposed placing Moffett Field on the National priorities List (NPL) in June 1986, and it was placed on the NPL in 1987. The Remedial Investigation and Feasibility Study (RI/FS) is coordinated through the August 1990 federal facilities agreement (FFA) with EPA and the California Environmental Protection Agency. The RI was implemented in two phases. The Phase I characterization was complete in August 1990. The Phase II investigations were initiated in 1990 to provide more detailed, site specific data. In October, 1992 EPA determined that the aquifers on the western side of Moffett Field were affected by a regional volatile organic compound (VOC) plume emanating from the Middlefield-Ellis-Whisman (MEW) Superfund site south of Moffett Field. EPA determined that these aquifers were subject to the 1989 Record of Decision (ROD) already written for the MEW site and would be remediated per the MEW ROD. Consequently, OU4 was deleted and OU5 was modified to include all aquifers not part of the regional plume. In May 1989, the Navy developed a community relations plan (CRP). The OU5 RI report was released in August 1993. The OU5 FS report was released in August 1995. The proposed plan for remediation of OU5 was released to the public in October, 1995. A public comment period was held from October 27, 1995 through November 30, 1995 with a public meeting on November 16, 1995. Moffett Field has been continuously operated by the U.S. military since it was commissioned in 1933. In 1945, Moffett Field was used as a major overhaul and repair base. In 1954, a weapons department was formed at the base, and then during the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons. No heavy manufacturing or major aircraft maintenance was conducted at Moffett Field, but a significant amount of unit- and intermediate-level maintenance occurred. In April 1991, Moffett Field was designated for closure as an active military base under the Department of Defense Base Realignment and Closure (BRAC) program. After closure, control of the base was transferred to the National Aeronautics and Space Administration (NASA), however, the Navy will continue with environmental restoration

activities and remain responsible for remediating Navy contaminant sources. Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and polychlorinated biphenyls (PCBs). Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks and sumps (many of them now removed) were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984 with an initial assessment of past use and disposal of hazardous materials. Nineteen sites were identified as potential waste sources. Remedial Investigation/Feasibility Study (RI/FS) work was coordinated through the August 1990 Federal Facilities Agreement with EPA and the State. The Phase I RI characterization was completed in August 1990. The more detailed Phase II investigations identified the need to separate the site into six Operable Units (OUs). Moffett Federal Airfield (MFA) is located in California, 35 miles south of San Francisco, 10 miles north of San Jose, and about 1 mile south of the southwestern edge of San Francisco Bay, in Santa Clara County, California. The facility encompasses 2,200 acres in Santa Clara County; the facility address is Moffett Federal Airfield, Moffett Field, California 94035. MFA is bounded by Cargill saltwater evaporation ponds to the north, Stevens Creek to the west, U.S. Highway 101 (Bayshore Freeway) to the south, and the Lockheed Martin Aerospace Center to the east. Several industrial facilities are located south of the Bayshore Freeway. In particular, a group of companies is located in a 0.5-square-mile area, bounded by U.S. Highway 101, Middlefield Road, Ellis Street, and Whisman Road (MEW). This area is known as the MEW Superfund study area and contains three Superfund sites. MFA also borders the cities of Mountain View and Sunnyvale, California. The City of Sunnyvale is located south and east of MFA; the City of Mountain View borders MFA on the south and west. The National Aeronautics and Space Agency's (NASA's) Ames Research Center is located west and north of the runways. The U.S. military continuously operated MFA as Naval Air Station (NAS) Sunnyvale from its date of commission in April 1933 until it was transferred to NASA on July 1, 1994. The Navy used the station as an air base until October 1935, when it was transferred to the Army Air Corps for use as a training base. During the Army's tenure, the National Advisory Committee for Aeronautics (NACA) established Ames Research Center in December 1939 on land adjacent to MFA. The base returned to Navy control and was renamed NAS Moffett Field in April 1942. By 1950, NAS Moffett Field was the largest naval air transport base on the West Coast and became the first all-weather air station. In 1958, NACA became NASA and Ames Research Center became the NASA Ames Research Center. Between 1973 and 1994, the mission of NAS Moffett Field involved support of antisubmarine warfare training and patrol squadrons. At one point, MFA was the largest P-3 base in the world, with nearly 100 P-3C Orion patrol aircraft. These aircraft were assigned to nine squadrons, supported by 5,500 military, 1,500 civilian, and 1,000 reservist personnel. No heavy manufacturing or major aircraft maintenance was conducted at NAS Moffett Field during the last mission; instead, mostly unit- and intermediate-level maintenance occurred. In April 1991, the station was designated for closure as an active military base under the U.S. Department of Defense (DoD) Base Realignment and Closure (BRAC) program. NASA assumed control of the base beginning in July 1994. Military housing units and associated facilities were transferred to Onizuka Air Force Base at the same time. NAS Moffett Field was then renamed MFA. Since the early 1980s, DoD has been identifying, evaluating, and controlling the spread of contaminants from historical hazardous waste sites as part of the Installation Restoration

MOFFETT NAVAL AIR STATION (Continued)

1000228683

Program (IRP) at MFA. This work is coordinated through a Federal Facility Agreement with the U.S. Environmental Protection Agency (EPA) and the California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB). The Navy is the lead agency for this work. The Navy and NASA signed a memorandum of understanding (MOU) on December 22, 1992, concerning environmental activities at the station. Under the MOU, the Navy will continue with environmental restoration and will remain responsible for remediating Navy contaminant sources. NASA is responsible for non-environmental operations and ongoing environmental compliance. NASA is planning to develop a world-class, shared-use educational and research and development campus at Moffett Field, California, in association with government entities, academia, industry, and nonprofit organizations. The NASA Ames Development Plan includes proposed development of four areas: -NASA Research Park: A 213-acre parcel located between Ames Research Center facilities, MFA, U.S. Highway 101, and the military housing area-Eastside/Airfield District: A 952-acre parcel that includes MFA and property located east of the airfield-Bay View District: A 95-acre parcel located north of the Ames Research Center facilities-Ames Research Center Facilities: A 240-acre parcel comprising the existing NASA Ames Research Center campus Surface water channels and ditches will be maintained for drainage purposes. Groundwater is not currently used at MFA. The only exception is water from a single well screened in the deep C aquifer (deeper than 155 feet below ground surface) used by NASA for fire fighting, composting, and agricultural purposes. This well is located in the northwestern corner of the Ames Research Center area. Public water is supplied to MFA from the Hetch Hetchy aqueduct owned by the City of San Francisco. Groundwater is unlikely to be used as a water supply source in the future because of poor ambient quality and low formation yield to a well. NASA's draft Programmatic Environmental Impact Statement does not consider development of groundwater as a future water supply source. EPA proposed MFA as a National Priorities List (NPL) site in June 1986, and MFA was included on the NPL in July 1987. Inclusion on the NPL initiated the Remedial Investigation (RI) and Feasibility Study (FS) process, as required by the CERCLA. The Navy began environmental studies at MFA in 1984. Twenty sites were originally identified as IRP sites at MFA. Investigations during the station-wide RI identified six additional, potentially contaminated sites. Only three sites were assigned numbers (Sites 21 through 23), and none of the additional sites was designated as an operable unit (OU). The six additional sites, which were investigated under the CERCLA program, are: Site 21, Site 22, Site 23, the Weapons Storage Bunkers, the former Industrial Wastewater Flux Ponds, and an ephemeral wetland located at an improperly abandoned agricultural well. Later, the Navy defined four additional sites (Sites 25 through 28), originally included as parts of other sites under previously established OUs. These sites include Site 25, the Eastern Diked Marsh and stormwater retention pond (included in OU6); Site 26, the east side aquifers (included in OU5); Site 27, the Northern Channel (included in OU6); and Site 28, the west side aquifers. All of the sites identified were investigated under the CERCLA program. The current OU definitions and study areas are: OU1: Soils and groundwater at Sites 1 and 2 landfills OU2-East: Soils at Sites 3, 4, 6, 7, 10 (runways), 11, and 13 OU2-West: Soils at Sites 8, 10 (Chase Park), 14-North, 16, 17, and 18 OU5: Aquifers on the eastern side of MFA that are not part of the regional plume or OU1 (Site 26) OU6: Wetland areas, Sites 25 and 27 Petroleum Sites: Sites 5, 9, 12, 14-South, 15, 19, 20, and 24 Additional Sites: Sites 21, 22, 23, Weapons Storage Bunkers, upland soil areas, Human Health Risk Assessment (HHRA) Exposure Area 4158, former Industrial Wastewater Flux Ponds, and the abandoned former agricultural well. Human health and ecological risk assessments were conducted as part of the station-wide RI. As agreed upon by the Navy, EPA, and RWQCB, six sites were recommended for No Action (formally referred to as No Further Action) in the

MOFFETT NAVAL AIR STATION (Continued)

1000228683

2001 Final Addendum to the Revised Final Station-wide Feasibility Study Report and have been addressed separately from the IR program. These sites are: Site 23, Golf Course Fill Area 3; Weapons Storage Bunkers; Former Industrial Wastewater Flux Ponds; Former Abandoned Agricultural Well; Upland Soils (areas that support upland plant communities); Station-wide Remedial Investigation HHRA Exposure Areas 3782, 3785, 3974, 4090, and 4158. The addendum to the report provides additional documentation to support the No Action recommendations for these sites. Two of the sites, Industrial Wastewater Flux Ponds and Former Abandoned Agricultural Well, were closed with concurrences from EPA or Santa Clara Valley Water District; therefore, they were not considered further in the CERCLA process. Three of the HHRA exposure areas, 3782, 3785, and 3974, are being addressed as part of other remedial actions or maintenance programs. The remaining No Action Sites (Site 23-Golf Course Fill Area 3, Weapons Storage Bunkers, Upland Soils, HHRA Exposure Area 4090, and HHRA Exposure Area 4158) were included in the Proposed Plan. The Proposed Plan was made available to the public during a formal comment period from December 15, 2001 through January 28, 2002. A public meeting was held on January 10, 2002 and a responsiveness summary was issued on May 28, 2002. As the proposed plan and earlier versions of the ROD suggest, HHRA Exposure Area 4090 was listed as a No Action Site even though this area was included in the station-wide ecological assessment for wetland areas being addressed under a separate action (Site 27). Because there are potential risk issues associated with this site, the HHRA Exposure Area 4090 is no longer identified as a No Action Site in this ROD. Instead, this site will be addressed under the ongoing Site 27 investigation. Site 23 Golf Course Fill Area: Site 23 is located on 2 acres, just south of the Northern Weapons Bunker area, in the western portion of the golf course. Golf Course Fill Area 3 is shown in aerial photographs taken in 1977 as one of several ponds on the golf course. Three of the ponds on the golf course were dry, and some debris was visible in the area of Golf Course Fill Area 3 in an aerial photograph taken in 1987. No information on the source of the material discarded in this area could be found. However, numerous small piles of soil, concrete, disaggregated asphalt, grass clippings, and mulch were identified during a site walk conducted in March 1994. In addition, some airplane parts, consisting of several pieces of aluminum (brought to Site 23 for disposal after a plane crashed at MFA), and some electronics equipment were found in the area. A magnetometer survey of this area was conducted in 1995. The results of the survey do not indicate that significant quantities of metallic materials were buried at the site. This evidence instead suggests that the area was never trenched and was used primarily for incidental disposal of excess soil and debris from the golf course. A No Further Action ROD was completed for Site 23 on August 19, 2002. Weapons Storage Bunkers: There are two groups of weapons storage bunkers: the Northern Weapons Storage Bunkers and the Southern Weapons Storage Bunkers. The weapons storage bunkers are located in two fenced areas in the northeastern portion of MFA, near the golf course. The Northern Weapons Storage Bunkers cover about 5 acres and include seven high-explosive magazines. The Southern Weapons Storage Bunkers cover about 10 acres and include nine high-explosive magazines. Each magazine consists of a heavy-gauge, corrugated steel arch that forms its roof and sides. The floors of the magazines are concrete, without drains. Each magazine is about 30 feet long, 20 feet wide, and 20 feet high. The magazines are covered with soil, forming long, earth-covered bunkers. Only one magazine in the Northern Weapons Storage Bunkers is still used and stores ammunition for the California Air National Guard. The Northern Weapons Storage Bunkers contained two diesel storage tanks. One of the tanks was removed in 1992, and the other tank was removed in 1994. No source for or evidence of contamination was identified in the Southern Weapons Storage Bunkers. A site inspection at the Northern Weapons Storage Bunkers in May 1994 found that the cement apron on the southern side

Database(s)
EDR ID Number
EPA ID Number

MOFFETT NAVAL AIR STATION (Continued)

1000228683

was free of staining or significant cracking, and the buildings were released for unrestricted use. The high-explosive magazines at the Northern Weapons Storage Bunkers also were investigated for radioactive contamination; however, no radioactivity was found. An inventory revealed two diesel storage tanks in this area. Tank 22 was a 600-gallon underground storage tank that held diesel fuel and was removed in 1992; Tank 102, a 55-gallon aboveground storage tank that contained diesel fuel, was removed in April 1994. Tanks 22 and 102 are evaluated and closed separately from CERCLA sites under the policy and guidance of RWQCB. Closure of Tank 22 is documented in the Phase I petroleum sites closure report. Tank 102 is being investigated during the Phase III tank investigation. The Phase III investigation involves tanks that require further assessment for closure. This work may include document research, sampling, and geophysical surveys. The results of this work will be included in the Phase III petroleum sites closure report. No soil samples were collected at the Southern Weapons Storage Bunkers, because no source for, or evidence of, soil contamination was identified. Based on the Navy's stated historical use of the bunkers, the Southern Weapons Storage Bunkers were not tested for radioactive contamination before they were transferred to the California Air National Guard in 1994. There is no reason to suspect that these facilities were used for storage of radioactive materials. Groundwater in the area of the weapons storage bunkers is addressed separately as part of OU5. OU5 includes all aquifers that are not affected by the regional plume in groundwater. As part of the RI for OU5, data for groundwater samples from all wells on the eastern side of the base, including monitoring wells near the weapons storage bunkers, were evaluated and are addressed in the OU5 ROD. A No Further Action ROD was completed for the Weapons Storage Bunkers August 19, 2002. Upland Soils: Upland soils are areas of MFA that support upland plant communities and include virtually all areas at the airfield that are not covered by ditches, marshes, or wetlands. Human activity has been significant in these areas. Certain areas of upland soils, such as open grassy areas and the edges of golf courses and recreational fields, are actively managed as burrowing owl habitat, but the majority of upland soils areas are either paved, landscaped, or have been altered substantially by land use during the last 100 years. A No Further Action ROD was completed for the Upland Soils area on August 19, 2002. Area 4158: HHRA Exposure Area 4158 is located slightly south, but almost adjacent to IRP Site 11 - Engine Test Stand Area. A No Further Action ROD was completed for the Human Health Risk Assessment Area 4158 on August 19, 2002. OU 7: The Site 22 Landfill is located in the northeastern corner of MFA. The Site 22 Landfill covers approximately 9.4 acres and contains an estimated total refuse (waste) volume of 92,000 cubic yards. The site was used as an active landfill from 1950 through 1967. The refuse is believed to consist primarily of domestic waste, as confirmed through exploratory trenching. Results of environmental investigations indicate that in some places, the waste is located beneath the groundwater table, while in others, waste is located near the surface (above the groundwater table). The Site 22 Landfill now underlies holes 6 and 7 of a golf course, which is operated by the United States Air Force. The fairway and putting greens for these holes are located on top of the landfill. The rough for holes 6 and 7, which contains trees, is on the sloped part of the landfill. Soil borings and trenching indicate that most of the landfill is covered with approximately 1.5 feet of soil; however, soil thickness in a few areas is less than 1 foot. The Site 22 Landfill was characterized in the Final Station-wide RI Report and the Additional Sites Investigation Phase II Draft Final Report. Because operating records do not exist for the Site 22 Landfill, the history of the landfill was researched by studying aerial photographs and historical maps of the area and interviewing base personnel. This review indicated that the landfill was active from 1950 to 1967. Base personnel reported that Site 22 was used as a municipal landfill after the landfill at Site 2 was closed. Visual

MOFFETT NAVAL AIR STATION (Continued)

1000228683

characterization of waste excavated at Site 2 confirmed that Site 2 contained primarily domestic waste; therefore, it was expected (and later confirmed) that the Site 22 Landfill also contained domestic waste. In 1973, the Site 22 Landfill was converted into holes 6 and 7 of the MFA golf course. In April 1998, an additional investigation was initiated to provide supplemental information about the Site 22 Landfill and its surrounding area. As part of this additional investigation, exploratory trenches were dug to further evaluate the vertical and horizontal extent of refuse within the landfill. The exploratory trenching uncovered municipal waste such as old tires, newspapers, vacuum tubes, and shampoo bottles. Based on the results of the trenching, the extent of the landfill was estimated to be approximately 9.4 acres, and the volume of refuse was estimated at approximately 92,000 cubic yards. The Air Force operates and maintains the golf course located in the northeast corner of the facility, which encompasses the Site 22 Landfill. The golf course has been maintained and operated for over 30 years, and there are no plans to change the land use of this area. It is therefore, likely that the Site 22 Landfill will remain part of the golf course. The selection and screening of remedial alternatives was thus conducted based on the premise that continued use as a golf course is the most likely future land use scenario, which has been confirmed with NASA personnel. A ROD addressing OU 7 was completed in June 2002. OU 8: Site 27 includes the Northern Channel, related ditches that drain into the Northern Channel, the berms along either side of the Northern Channel, and the debris pile near the Building 191 lift station. The Northern Channel is located near the northeastern boundary of the former NAS Moffett Field. Historically, the Northern Channel has received stormwater runoff from the former NAS Moffett Field and NASA Ames Research Center. Portions of the Northern Channel that are owned by Lockheed, Cargill Salt, and the Santa Clara Valley Water District extend eastward, approximately 5,500 feet beyond the boundary of the former NAS Moffett Field. The areas that make up Site 27 are summarized below: -Northern Channel and Berms: Nearly 2 miles long, the Northern Channel receives stormwater from the eastern portion of the former NAS Moffett Field. Water in the channel flows east, approximately 1 mile beyond the boundary of the former NAS Moffett Field into Lockheed Channel. The Northern Channel flows by gravity at this termination point through a pipe to the terminus of the Lockheed Channel, which runs parallel to the eastern end of the Northern Channel. The two channels are separated by a levee. Water from the terminus of Lockheed Channel is pumped into the Moffett Channel, which drains into Guadalupe Slough and eventually into San Francisco Bay. The Northern Channel provides brackish surface water habitat of moderate value to wildlife. The surface area of the channel is about 9 acres; its bottom substrate is sediment, and the banks are fill material. The width of the channel is 40 to 50 feet, but increases to 70 feet at the western end; the channel is about 10,000 feet long, and the bottom of the channel lies approximately 2.8 feet below mean sea level. The north levee is made of compacted hard clay and is approximately 5 feet high (above the water level in the channel), with flat surfaces and steep side slopes. The slopes of the bank are moderately eroded with loose surface material that supports a moderate amount of plants. The south levee is also made of compacted clays and supports a greater diversity of vegetation. Wildlife surveys have detected the presence of the western pond turtle, various plants, and a wide variety of shore birds and waterfowl in the area. -Marriage Road Ditch: Located east of the runways, Marriage Road Ditch divides the golf course at the former NAS Moffett Field. The ditch extends about 2,300 feet, and the bottom of the ditch is 5 to 6 feet below mean sea level. Water flowing in Marriage Road Ditch is perennial and portions of the ditch are lined with concrete. Surface water from the east apron area and from the storm drains in and around Hangars 2 and 3 discharges into the ditch. Marriage Road Ditch receives additional runoff from the southern two-thirds of the runways and the golf course east and west

1000228683

of the ditch. Surface water from Marriage Road Ditch drains into North Patrol Road Ditch. During the rainy season, surface water from Marriage Road Ditch is occasionally pumped directly into the Northern Channel to prevent flooding during storms. The probable source of contamination in Marriage Road Ditch is historical surface water runoff from storm drains. These storm drains collected runoff from the paved and unpaved areas around Hangars 2 and 3 and conveyed it to Marriage Road Ditch. The ditch provides habitat for insects, worms, snails, and the western pond turtle. Several species of plants grow in and along the sides of the ditch. -Patrol Road Ditch: Patrol Road Ditch (also known as the East Patrol Road Ditch) is a surface drainage feature that runs 2,100 feet along the eastern boundary of the former NAS Moffett Field; the bottom of the ditch is about 5 to 6 feet below mean sea level. The ditch is part of the storm drain system at the former NAS Moffett Field. Its flow in the southern end is intermittent and depends on rainfall. The northern end of the ditch receives regular runoff from irrigation of the golf course and contains water year round. Surface water from Patrol Road Ditch flows into North Patrol Road Ditch through a culvert during periods of high water; water from the ditch is occasionally pumped directly to the Northern Channel during winter rainstorms. The probable source of contamination is surface water runoff into the storm drains that feed into Patrol Road Ditch. During the wet season, the northern end of the ditch provides open water and emergent vegetation. During the dry season, the southern end consists of habitat similar to upland areas. Several species of birds have been identified in Patrol Road Ditch. -North Patrol Road Ditch: This ditch runs 4,300 feet along the North Patrol Road, parallel to and south of the Northern Channel. The western portion of the ditch is lined with concrete, lies about 5 to 6 feet below mean sea level, and generally contains water year-round. The North Patrol Road Ditch carries surface water from east to west toward the Building 191 lift station. The North Patrol Road Ditch is an integral part of the storm drain system at Moffett. North Patrol Road Ditch receives stormwater from Marriage Road Ditch, Patrol Road Ditch, and the golf course. Surface water flow through the North Patrol Road Ditch is intermittent and depends on rainfall. The banks of the ditch are defined and are made of fill material and emergent vegetation but represent poor wetland habitat. Species observed here include ducks, doves, burrowing owls, and squirrels. -Debris Pile: The debris pile is located north of the Building 191 lift station at the western end of the Northern Channel, between the north bank of the channel and south bank of the U.S. Fish and Wildlife Service Diked Ponds. The pile consists of about 10,000 cubic yards of dredged sediment from the Northern Channel and construction debris from the 1950s to 1990s. Ownership of the Northern Channel and related areas within Site 27 is divided among NASA, Lockheed, U.S. Fish and Wildlife Service, Santa Clara Valley Water District, Cargill Salt, and the City of Sunnyvale. NASA owns the southern berm along the northern boundary of the former NAS Moffett Field and a portion of the property where the debris pile is located. In addition, NASA owns the Marriage Road Ditch, the Patrol Road Ditch, and the North Patrol Ditch. Lockheed owns the southern berm along the northern boundary of its property and a small portion of the Northern Channel. Cargill Salt owns the remainder of the berm, the Northern Channel, and the remainder of the area where the debris pile is located. U.S. Fish and Wildlife Service purchased the saltwater evaporation ponds adjacent to Site 27 from Cargill Salt in 2003. The City of Sunnyvale owns ponds and a publicly owned treatment works located near the eastern end of the Northern Channel. In addition, Sunnyvale leases a portion of the berms for hiking and biking trails. In April 1991, the Base Realignment and Closure Commission voted to (1) decommission the former NAS Moffett Field, (2) transfer naval operations from the former NAS Moffett Field to other naval facilities, and (3) transfer most of the former NAS Moffett Field property to the NASA Ames Research Center. The areas south and west of Site 27 are part of the former NAS Moffett Field.

MOFFETT NAVAL AIR STATION (Continued)

1000228683

Current tenants include the U.S. Army, the U.S. Air Force, and the California Air National Guard. Current uses include airfield operations, military facilities, and NASA research facilities. The former NAS Moffett Field has a fully functional federal airport and maintains facilities for military personnel and their families, including housing, commissary, clinic, service station, tennis courts, and a golf course. The tidal salt marsh and mud flats north and northeast of the former NAS Moffett Field were diked more than 50 years ago and were formerly used as commercial saltwater evaporation ponds. Cargill Salt, the former owner, sold the ponds to the U.S. Fish and Wildlife Service in 2003. Stormwater drainage is expected to be the future use of the Northern Channel and associated ditches, as it has been for the last 50 years. Remedial alternatives were selected and screened based on the premise that continued use for stormwater drainage is the most likely future land use scenario. Existing beneficial uses of groundwater, including municipal and domestic, industrial process, and industrial and agricultural water supply, are listed in the Basin Plan. Concentrations of total dissolved solids in groundwater in the area of Site 27 do not meet criteria in U.S. Environmental Protection Agency classification guidelines for a potential source of drinking water. According to the Basin Plan, the beneficial uses for surface water near the site are freshwater/estuarine habitat and wildlife habitat. A Record of Decision (ROD) addressing Operable Unit 08 at the NAS Moffett Field site was completed in July 2005.

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills and onto the ground. As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program (IRP), established in

1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. The Navy has completed Phase I records search) of the program and is beginning Phase II remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste Discharge Requirements for Moffett Naval Air Station. The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II. Moffett is revising the quality assurance project plan and sample plan for the characterization step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Summary Details:

Conditions at proposal June 24, 1988): Spectra-Physics, Inc. SP) has manufactured electronic equipment and gas lasers on Terra Bella Boulevard and Middlefield Roads in Mountain View, Santa Clara County, California, since 1961. The 11.5-acre site consists of nine buildings in a light industrial complex. SP uses a variety of cleansers, degreasers, and lubricants in its manufacturing processes, including isopropyl alcohol, acetone, methyl alcohol, trichloroethylene TCE), Freon, 1,1,1-trichloroethane TCA), and Solvasol Solvent 360. In an inspection conducted in 1981, the California Regional Water Quality Control Board CRWQCB) found that areas where ha arduous wastes

1000181197

were stored had no dikes or systems to collect leachate; rusty barrels were also found on-site. Ground water investigations began at the SP facility in September 1984 after tests at Teledyne Semiconductor adjacent and downgradient of SP) indicated possible upgradient sources of contamination. The Teledyne site was placed on the NPL in July 1987.) Soil and ground water collected at SP contained TCE, TCA, and 1,2-dichloroethylene. SP s plume of contaminated ground water has merged with Teledyne s and migrated off-site. More than 200 private drinking water wells had been drilled into the 1-square-mile plume. Most wells have been closed; 47 were found contaminated above State Action Levels. The owners now obtain water from municipal water supplies. An estimated 189,000 people obtain drinking water from public and private wells within 3 miles of the site. Teledyne is operating two extraction wells on-site -- one in the shallow one and one in the intermediate one. The wells pump the water to the surface and discharge it to the sanitary sewer; the ground water is not treated before discharge. SP will evaluate the effectiveness of this system in preventing its on-site plume from migrating off-site. Both companies are jointly designing an off-site extraction system. San Francisco Bay 2.5 miles downstream of the site) is used for recreational activities. Permanente Creek is tidally influenced within 1 mile of the site. Several species of birds designated as endangered species by the U.S. Fish and Wildlife Service are found within the area of tidal influence. Status February 11, 1991): In February 1990, SP installed a vapor extraction system to reduce concentrations of contaminants in soil. Under an order issued by CRWQCB, SP conducted a remedial investigation/feasibility study (RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. The RI/FS was completed in December 1990. In February 1991, CRWQCB will adopt a final cleanup and abatement order requiring SP to implement the best remedial alternative evaluated in the RI/FS. This alternative will include expanding the existing soil vapor extraction system and the ground water extraction system. In April 1991, EPA will complete a Record of Decision describing the selected remedy.

 Pathway: GROUND WATER PATHWAY
 Scoring: 2

NPL Status: Currently on the Final NPL
 Substance ID: U228
 Substance: TRICHLOROETHYLENE (TCE)
 CAS #: 79-01-6
 Pathway: GROUND WATER PATHWAY
 Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): Teledyne Semiconductor has manufactured semiconductors on a 1-acre site in Mountain View, Santa Clara County, California, since 1962. In December 1982, Teledyne reported to the California Regional Water Quality Control Board CRWQCB) that soil and ground water near an underground storage tank were contaminated with solvents, including trichloroethylene. An investigation in June 1984 revealed that the contaminants had migrated to the north and affected approximately 50 private domestic wells. Local agencies and the company have provided alternative sources of drinking water for the affected residences. About 116,000 people depend on wells within 3 miles of the site as a source of drinking water. The company is working with CRWQCB to determine the extent of the contamination and to develop interim hydraulic controls to prevent further migration of the contaminants. The facility received Interim Status under Subtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status February 1986): CRWQCB, in conjunction with EPA and the California Department of Health Services, is considering various response actions at the site. This site remains in proposed status until EPA implements the appropriate elements of its final policy for placing RCRA-related sites on the NPL and then applies the policy to this site. Status July 22, 1987): Subsequent investigation revealed that this site is not subject to the Subtitle C permitting requirements of RCRA. Its score on the Hazard Ranking System, which EPA uses to evaluate sites for the NPL, is above the cutoff point of 28.50, and EPA received no information that prevents placing the site on the NPL. Therefore, it is being placed on the NPL. Teledyne is planning on

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007

Waste name: CHROMIUM

Waste code: D008

Waste name: LEAD

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

FINDS:

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites,

including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Summary Details:

Conditions at proposal June 24, 1988): CTS Printex, Inc., manufactured printed circuit boards on 5.6 acres in Mountain View, Santa Clara County, California, during 1966-85. Printex was incorporated in 1966 and acquired by CTS Corp. in 1981. In the wet-floor building at 1911 Plymouth Street, acid waste water containing copper, lead, and organic wastes containing trichloroethylene TCE) and other solvents drained to the floor, collected in a sump where they were neutralized with ammonia, and discharged to the

1000128432

Mountain View sanitary sewer. Early in 1985, a consultant to CTS Corp. found high levels of copper and lead in soil near the wet-floor building and high levels of TCE, 1,1,1-trichloroethane, and 1,1-dichloroethylene in monitoring wells downgradient of the site. An estimated 189,000 people obtain drinking water from municipal wells within 3 miles of the site. Permanente Creek borders the site. Surface water drainage eventually discharges to San Francisco Bay 2.5 miles to the north. Late in 1985, the company excavated the sump area and filled it in, decontaminated the building, and transported waste materials to a hazardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act (RCRA). In October 1986, the California Department of Health Services certified closure of the facility. In an attempt to stop migration of contaminated ground water off-site, the company is pumping the water and discharging it to Mountain View's sanitary sewer system under a city permit. The company continues to monitor to define the plume of contaminated ground water. In March 1987, the California Regional Water Quality Control Board (CRWQCB) issued a Cleanup and Abatement Order requiring the company to be more expeditious and thorough in its cleanup and set a schedule for various on- and off-site tasks. Status February 21, 1990): CTS Printex is conducting a remedial investigation/feasibility study (RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. In November 1989, CRWQCB received the first draft of the RI/FS for review. The final draft is scheduled to be submitted in late 1990.

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Small Small Quantity Generator

Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste: Unknown
 Mixed waste (haz. and radioactive): Unknown
 Recycler of hazardous waste: Unknown
 Transporter of hazardous waste: Unknown
 Treater, storer or disposer of HW: No
 Underground injection activity: Unknown
 On-site burner exemption: Unknown
 Furnace exemption: Unknown
 Used oil fuel burner: Unknown
 Used oil processor: Unknown
 User oil refiner: Unknown
 Used oil fuel marketer to burner: Unknown
 Used oil Specification marketer: Unknown
 Used oil transfer facility: Unknown
 Used oil transporter: Unknown
 Off-site waste receiver: Commercial status unknown

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED

Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

CA WDS:

Facility ID: San Francisco Bay 431006917
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
 Subregion: 2

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Comments: ON CORTESE LIST SAMPLE RESULTS VOLATILE ORGANIC COMPOUNDS (VOCS) AND METALS WERE FOUND IN THE ON-SITE SOIL. TETRACHLOROETHYLENE (PCE 2300 PPB), TRICHOLORETHYLENE (TCE 1600 PPB), AND 1600 PPB OF FREON 113 WERE FOUND IN ON-SITE GROUNDWATER. THE FORD AEROSPACE HAS BEEN MANUFACTURING SATELLITE AND SATELLITE EQUIPMENT AT THIS FACILITY SINCE ITS OPERATION BEGAN IN 1988. SITE SCREENING DONE THERE IS REPORTED OBSERVED RELEASE OF CONTAMINANTS AT ON-SITE SOIL AND GW. VOCS AND METALS FOUND IN ON-SITE SOIL. SITE CHARACTERIZATION IS NOT COMPLETE. RECOMMEND PEA (HIGH).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D005

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste code: P106
Waste name: SODIUM CYANIDE

Biennial Reports:

Last Biennial Reporting Year: 2005

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Reclamation: Not reported
 POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

California - Hazardous Waste Tracking System - Datamart

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Corrective Action Summary:

Event date: 06/01/1987
Event: CA074LO

Event date: 06/01/1987
Event: CA050R9

Event date: 06/01/1987
Event: CA049PA

Event date: 06/01/1987
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 08/16/1989
Event: CMS Imposition

Event date: 08/16/1989
Event: RFI Imposition

Event date: 08/16/1989
Event: Stabilization Measures Implemented, Primary measure is source removal and/or treatment (e.g., soil or waste excavation, in-situ soil treatment, off-site treatment).

Event date: 01/01/1990
Event: CA029ST

Event date: 08/15/1990
Event: Stabilization Construction Completed

Event date: 08/02/1994
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Biennial Reports:

Last Biennial Reporting Year: 2005

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 8483

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 49647

Waste code: D008
Waste name: LEAD
Amount (Lbs): 15

Waste code: D011
Waste name: SILVER
Amount (Lbs): 172

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Amount (Lbs): 23248

Other Pertinent Environmental Activity Identified at Site

California - Hazardous Waste Tracking System - Datamart

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: D009
Waste name: MERCURY

Waste code: D022
Waste name: CHLOROFORM

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA WDS:

Facility ID: San Francisco Bay 431006919
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 2
Facility Telephone: 4158524033
Facility Contact: JOHN THEBERGE
Agency Name: SPACE SYSTEMSLORAL
Agency Address: 3825 Fabian Way # D-07
Agency City,St,Zip: Palo Alto 943034604
Agency Contact: JAMES TILLMAN
Agency Telephone: 4158524033
Agency Type: Private
SIC Code: 0
SIC Code 2: Not reported
Primary Waste: Not reported
Primary Waste Type: Not reported
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Other Pertinent Environmental Activity Identified at Site

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Comments: Site Screening done. This 1/3 acre site was leased by Fairchild Semiconductor Corporation from its owners, Edward & Gladys Schlaager in 1957. Fairchild's operation through 1967 involved use of small quantities of trichlorethylene (TCE) and acetone. Advalloy leased the property in 1968 and purchased it in 1971. Advalloy manufactured lead mounting frames for printed circuit boards at this facility until closure of operation in December 1989. Currently, Advalloy is in bankruptcy and the site is unoccupied. Prompted by discovery of volatile organic compounds in groundwater at a downgradient site, RWQCB advised groundwater investigation at Advalloy site. Shallow monitoring well samples showed the presence of 1,1 dichloroethane, 1,1 dichloroethene, trans-1,2 dichloroethene, trichloroethylene, and ethylbenzene in groundwater. In view of the use of the various solvents at the site and a history of spillages and violations, Advalloy was determined to be a source of groundwater contamination. However, the impacted shallow aquifer has no beneficial use and is not locally interconnected with the deeper aquifer. Despite some

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Classification: Small Small Quantity Generator
 Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: Unknown
 Transporter of hazardous waste: Unknown
 Treater, storer or disposer of HW: No
 Underground injection activity: Unknown
 On-site burner exemption: Unknown
 Furnace exemption: Unknown
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Commercial status unknown

 Comments: DTSC received EPAs Preliminary Assessment dated 02/07/92. EPA recommends higher-priority SSI under CERCLA. EPA PA: EPA recommends further action because groundwater contamination may be attributed to the storage and use of hazardous materials by a previous Building 2420 tenant, and a release of hazardous chemicals to the air is suspected.

Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF

 POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Other Pertinent Environmental Activity Identified at Site

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date form received by agency: 12/04/1997
Facility name: SENDELBECK CO
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT

Waste name: MERCURY

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Biennial Reports:

Last Biennial Reporting Year: 2005

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

Amount (Lbs): WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
2188

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

California - Hazardous Waste Tracking System - Datamart

NEPT (National Environmental Performance Track) is designed to recognize facilities that consistently meet their legal requirements and have implemented high-quality environmental management systems. Performance Track encourages facilities to continuously improve their environmental performance and to work closely with their community and employees.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
 Waste name: BENZENE

Violation Status: No violations found

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
