

Composting Organic Waste Reduces Methane Emissions and Slows Global Warming

Sorting Compostables is Required

From increased wildfires to extreme weather, climate change is affecting all of us. California Senate Bill 1383 set statewide goals to reduce greenhouse gas emissions by limiting organic waste, such as food, yard trimmings, and soiled paper from being disposed of in landfills.

Landfills are the third largest producers of methane in California, responsible for 20% of the state's methane emissions. Composting produces significantly less methane, and reducing methane is one of the fastest ways to slow global warming.

Composting your organic waste at home or placing it in your green compost container contributes to the City's sustainability efforts by reducing greenhouse gas emissions.

What do these requirements mean for you?

Whether you are a residence or business, you are required to properly sort *all* food scraps, yard trimmings, and food-soiled papers in your green compost collection containers.

Residents

- Separate your waste into the appropriate container — recycle, compost or landfill
- Multifamily property management must provide sorting information and training to new tenants and employees

Food Generating Businesses & Food Recovery Organizations

- Grocery stores, large restaurants, and hotels — recover and donate surplus edible food
- Have written contracts with food recovery organizations or services
- Maintain food donation records
- For more details, visit the Santa Clara County Food Recovery program: reducewaste.sccgov.org/food-recovery

All Businesses

- Separate your waste into the appropriate container — recycle, compost or landfill
- Set up waste stations with properly color-coded containers and signage
- Provide information and training to employees and tenants
- Inspect waste containers for contamination

Self-Haulers of Organic Waste *(gardeners, landscapers, construction contractors)*

- Separate your waste into the appropriate container — recycle, compost or landfill
- Take organic waste (landscape and pruning waste, yard trimmings, lumber, wood debris, pallets, etc.) to an approved organics processing facility
- Maintain records of self-hauled organic material
